

Repositories for UMD and CMD

Mario David (LIP), João Pina (LIP), Carlos Manuel (LIP), Jorge Gomes (LIP), Pablo Orviz (IFCA)

The **EGI Software Repository** provides access for the middleware distributions together with some Community Repositories

Three main categories:

- The Unified Middleware Distribution (**UMD**): redistribution of traditional middleware
- Cloud Middleware Distribution (**CMD**): specific middleware for OpenStack and OpenNebula integration components
- **IGTF** Distribution of Authority Trust Anchors: packages with the trust anchor information

OS Support

- Centos 7

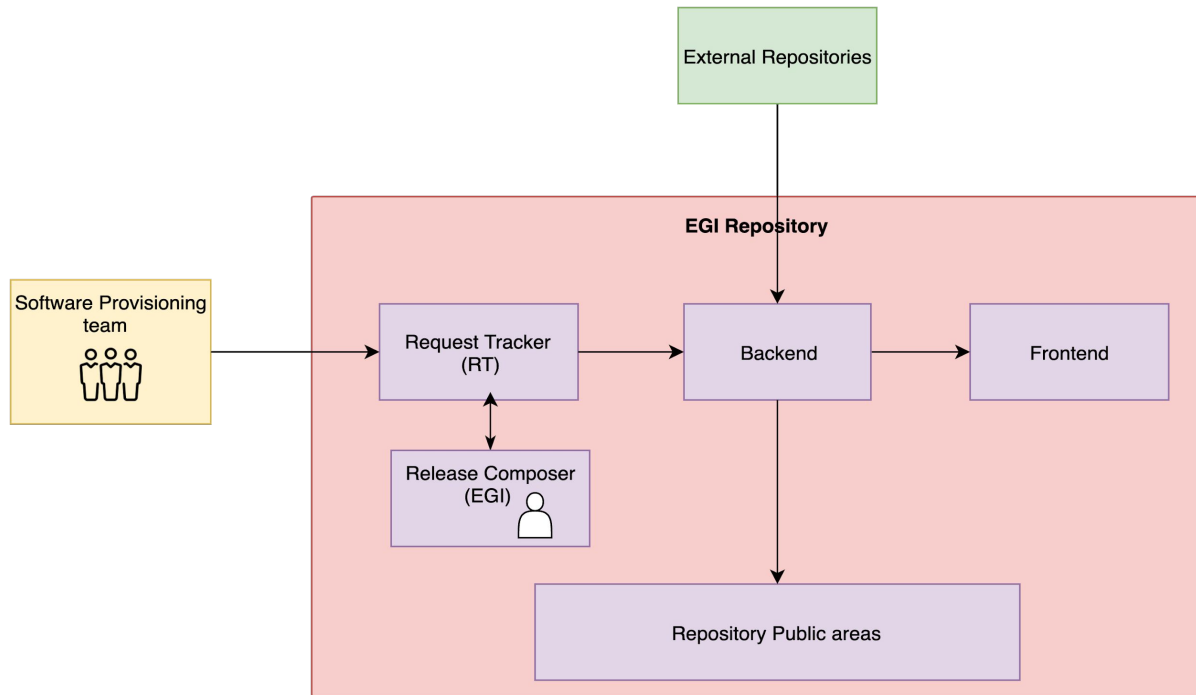

Provider:

- IBERGRID since 2020

Current architecture

Old setup:

- No new functionalities for many years, since it's hard to implement them.
- Backend based on perl scripts with tight relation with RT.
- Too many manual steps (RT fully manual) leading to a large delay in the releases of packages
- Frontend outdated which could lead to security issues (**already replaced by a simplified version**)

One year access data

TOP REQUESTS SORTED BY HITS [AVGTS, CUMTS, MAXTS, MTHD, PROTO]

Panel Options

#	Hits	Visitors	Tx. Amount	Method	Data
359,379,557	49,235,280	2.38 TiB	182,755 Total		
Max: 37,237,056	Max: 1,735,552	Max: 258.03 GiB			
Min: 1	Min: 1	Min: 0 Byte			

New architecture

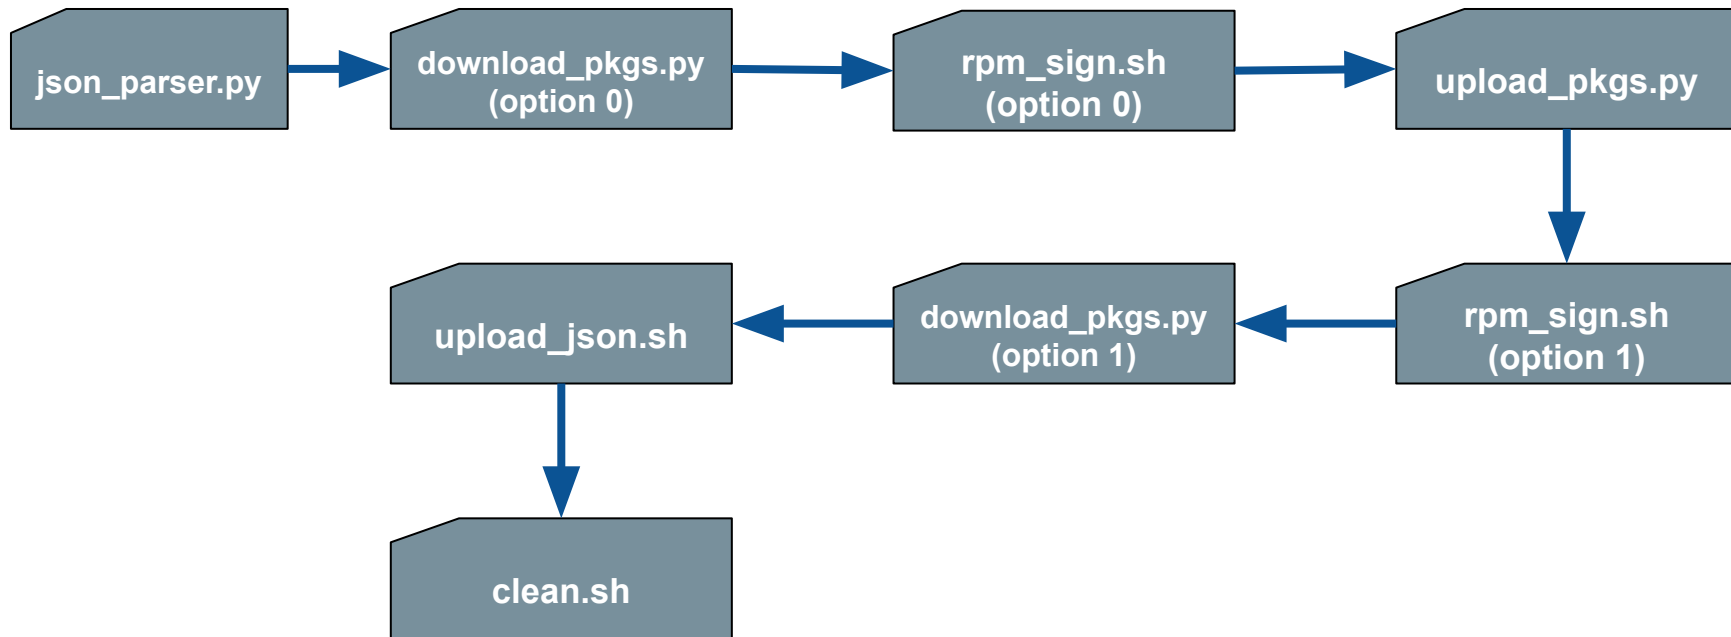

New setup:

- **Complete redesign of the service**
- Allow full automatization of the process
- Easier to add new functionalities like new OS, containers support
- Better integration with Jenkins
- New Frontend layout based on software products rather than releases.
- **Planned entering production 4 quarter of 2022**

Future:

- Integration with SQaaS service from EOSC-synergy
- Allow it to be used by external users: EGI / EOSC marketplace

UMD/CMD new Workflow

Pipeline

<https://github.com/egi-qc/software-releases>
<https://nexusrepoegi.a.incd.pt/#browse/browse:egi>

The pipeline is as follows:

1. `json_parser.py`: parse json, get the list of files to download and produce list of filenames (packages).
2. `download_pkgs.py` (option 0): download the packages to a temporary directory.
3. `rpm_sign.sh` (option 0): rpm sign each package.
4. `rpm_sign.sh` (option 0): verify signature of each package.
 - a. a. verification of the packages
5. `upload_pkgs.py`: upload each package to nexusrepo.
6. `download_pkgs.py` (option 1): download each package from nexusrepo.
7. `rpm_sign.sh` (option 1): verify chksum and signature.
8. `upload_json.sh`: upload json to the frontend for publication.
9. `clean.sh`: clean temporary directories.

Yum / apt repositories

The screenshot displays the Sonatype Nexus Repository Manager web interface. The top header bar is dark grey and contains the Sonatype logo, the text "Sonatype Nexus Repository Manager OSS 3.38.0-01", a green cube icon, and a search bar labeled "Search components".

On the left side, there is a sidebar with a "Browse" button highlighted in green. Below it are links for "Welcome" and "Search".

The main content area shows the "Browse" view for a database component. It features a "HTML View" link and a tree structure of folders. The "production" folder is expanded, showing sub-folders: "cas", "cmd-one", "cmd-os", "sam", and "umd".

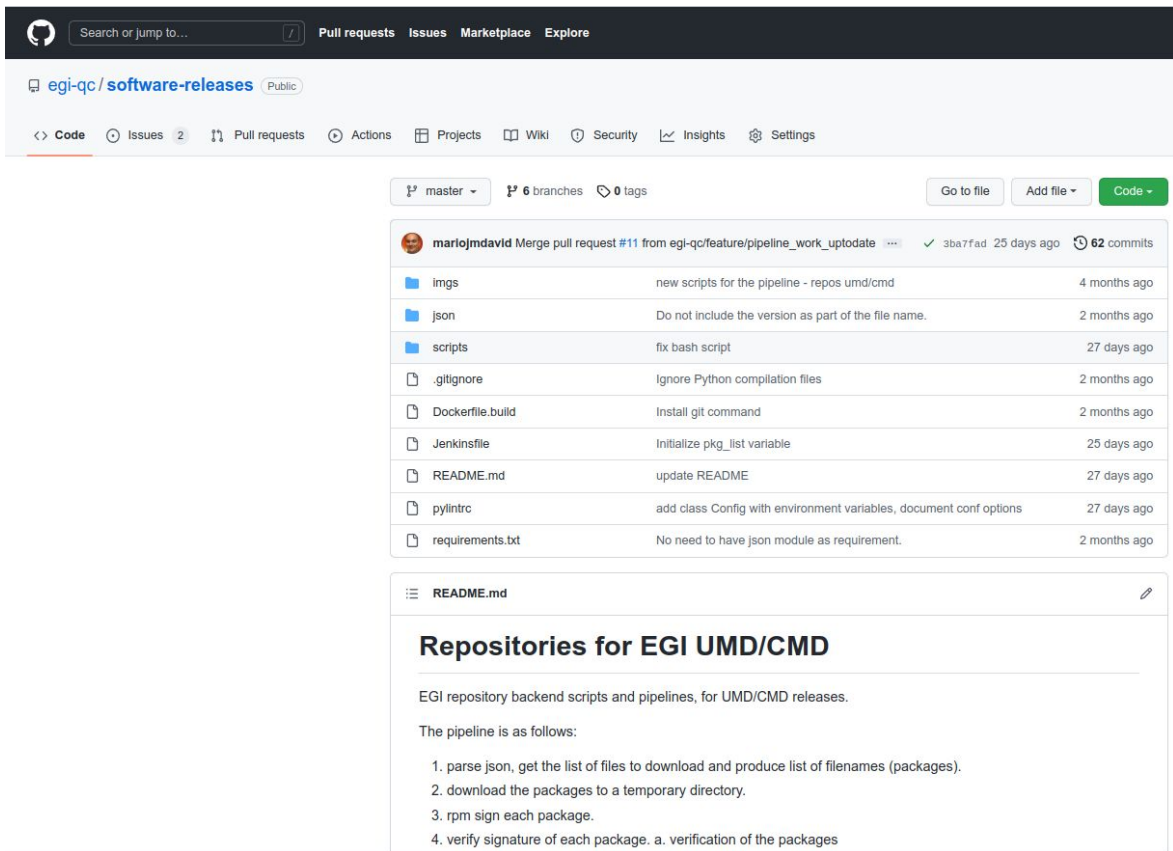

Sonatype Nexus Repository Manager
OSS 3.38.0-01

[HTML View](#)

- production
 - cas
 - cmd-one
 - cmd-os
 - sam
 - umd

Tracking of the workflow all based on git

The screenshot shows the GitHub interface for the repository `egi-qc/software-releases`. At the top, there's a search bar and navigation links for Pull requests, Issues, Marketplace, and Explore. Below the repository name, there are tabs for Code, Issues (with 2 open), Pull requests, Actions, Projects, Wiki, Security, Insights, and Settings. The main content area shows a pull request merge by `mariojmdavid` from `egi-qc/feature/pipeline_work_update` to the `master` branch. Below this, a table lists the files included in the pull request:

File	Description	Time
<code>imgs</code>	new scripts for the pipeline - repos umd/cmd	4 months ago
<code>json</code>	Do not include the version as part of the file name.	2 months ago
<code>scripts</code>	fix bash script	27 days ago
<code>.gitignore</code>	Ignore Python compilation files	2 months ago
<code>Dockerfile.build</code>	Install git command	2 months ago
<code>Jenkinsfile</code>	Initialize <code>pkg_list</code> variable	25 days ago
<code>README.md</code>	update README	27 days ago
<code>pylintrc</code>	add class Config with environment variables, document conf options	27 days ago
<code>requirements.txt</code>	No need to have json module as requirement.	2 months ago

Below the file list, the `README.md` file is expanded, showing the title **Repositories for EGI UMD/CMD** and the following text:

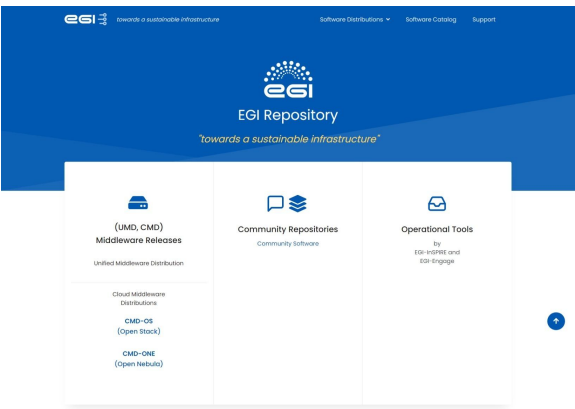

EGI repository backend scripts and pipelines, for UMD/CMD releases.

The pipeline is as follows:

1. parse json, get the list of files to download and produce list of filenames (packages).
2. download the packages to a temporary directory.
3. rpm sign each package.
4. verify signature of each package. a. verification of the packages

SOFTWARE-DISTRIBUTIONS

Here you can find all the SOFTWARE-DISTRIBUTIONS distribution releases.

Filter by distribution:
UMD, CMD-OS, CMD-ONE, All

UMD-4.15.0 • published

UMD 4.15.0 is an update release of UMD 4. It includes StorM 1.11.21, lcms-plugins 1.8.1, CERN Frontier 4.15.2, dmilite 1.15.0, APEL SSM 3.2.1, DDNS Nagios probe 1.0.1, dCache 6.2.24, Infrastructure Manager Nagios probe 1.0.1

UMD-4.14.0 • published

UMD 4.14.0 is an update release of UMD 4. It includes ARC 6.12.0, xrootd 5.2.0, xrootd 5.2.0, davix 0.7.6, gridftp 13.24.1, gfal2 2.18.2

Software Catalog

Filter by distribution:
UMD, CMD-OS, CMD-ONE, All

apeli.apeli-ssm-2.3.0 CMD-OS-1.3.0 • published 2020-02-18 13:34:44

Secure Stamp Messenger (SSM) is designed to simply send messages using the STOMP protocol. Messages are signed and may be encrypted during transit. Persistent queues should be used to guarantee delivery.

capabilities File Management Resource Manager

apeli.apeli-1.8.1 CMD-OS-1.3.0 • published 2020-02-18 13:34:44

The APEL project provides grid accounting for EGI. It is written in Python and uses MySQL.

undefined capabilities File Management Resource Manager

lfc.casos-1.4.0 CMD-OS-1.3.0 • published 2020-02-18 13:34:44

casO is a pluggable extractor of Cloud Accounting Usage Records from an OpenStack installation. casO gets usage information from nova or cellometer APIs and can generate valid output for APEL SSM or logstash.

undefined capabilities File Management Resource Manager

infoprovider.cloud-info-provider-0.12.0 CMD-OS-1.3.0 • published 2020-02-18 13:34:44

Software Distributions

The EGI Software Repository Portal provides a unified point of access for the **Middleware Distributions**, the **Community Repositories** and the **Operational Tools**.

The Middleware Distributions are divided in **Unified Middleware Distribution (UMD)** and **Cloud Middleware Distribution (CMD)**.

UMD - Unified Middleware Distribution

is the integrated set of software components contributed by Technology Providers and packaged for deployment on production quality services in EGI. UMD release schedule is available here.

Current: UMD-4 Future: UMD-5 Past: UMD-2, UMD-3

CMD - Cloud Middleware Distribution

distributes Openstack and Openstack integration components developed by Cloud Technology Providers. Two different distribution are technically available, CMD-OS for Openstack and CMD-ONE for Opennebula. For further details, please have a look at the Cloud Middleware Distribution wiki.

CMD-OS (Openstack) CMD-OS-1 CMD-ONE (Opennebula) CMD-ONE-1

Community Repositories - Community Software

is the integrated set of software components contributed by Technology Providers and packaged for deployment on production quality services in EGI. UMD release schedule is available here.

• Distributions Complete list

dcache.dcache 6.2.24

deployed • UMD 4.15.0 • published 2021-07-23 13:39:45

dCache provides system for storing and retrieving huge amounts of data, distributed among a large number of heterogeneous server nodes, under a single virtual filesystem tree with a variety of standard access methods.
