Stakeholders

...

- EOSC4Cancer as provider of the **infrastructure for the exploitation of cancer data** for the **EU Cancer Mission**.
- EOSC4Cancer brings together comprehensive **cancer centres, research infrastructures**, leading **research groups**, and major **computational infrastructures** across Europe to make the exploitation of the data possible.
- EOSC4Cancer will prepare **EOSC services** for cancer research and enrich EOSC with **data, tools** and **services** from the cancer community.
- **Start:** 1 September 2022 (30 months)
- **Consortium:** 28 full beneficiaries, 1 associated partner & 5 affiliated entities.

Partners, associates, and affiliated entities

- Enable **storage, access, sharing, analysis** and processing of research data and other digital **research objects** from basic and clinical cancer research.
- Mobilise, **interconnect** and **interoperate datasets** relevant in cancer research.
- Make cancer research **data** and **analysis systems** accessible to basic and clinical scientists in the most used cancer **analysis portals**.
- Integrate digital tools, data analytics and Artificial Intelligence/Machine Learning tools for the analysis of cancer data in the cancer analysis portals.
- Contribute to the **European Health Data Space** (EHDS), the Horizon Europe **European Open Science Cloud** (EOSC) Partnership and the **Cancer Mission**

→ ***Facilitate Cancer Research across Member States and Associated Countries***

Result #1: A platform that will enable **storage, sharing, access, analysis** and processing of research data and other digital research objects from **basic and clinical cancer research**.

Result #2: **Mobilisation, interconnection and interoperation** of **datasets relevant in cancer research**. Contribute with protocols and operating procedures to facilitate the progressive adoption of the **FAIR principles** across data sources but also for research software.

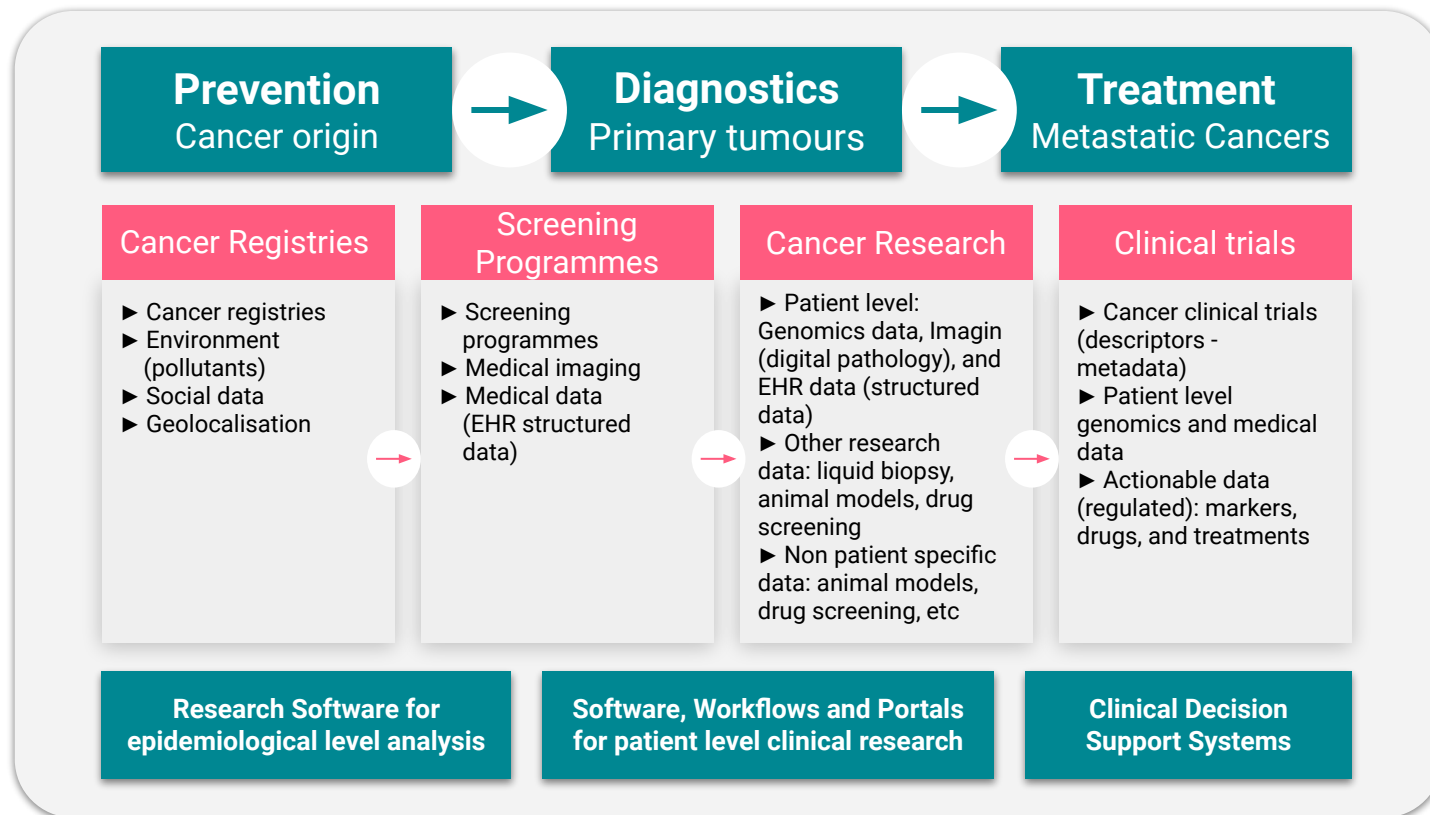

→ ***Researchers, healthcare professionals, cancer patients, and survivors contributing to cancer research***

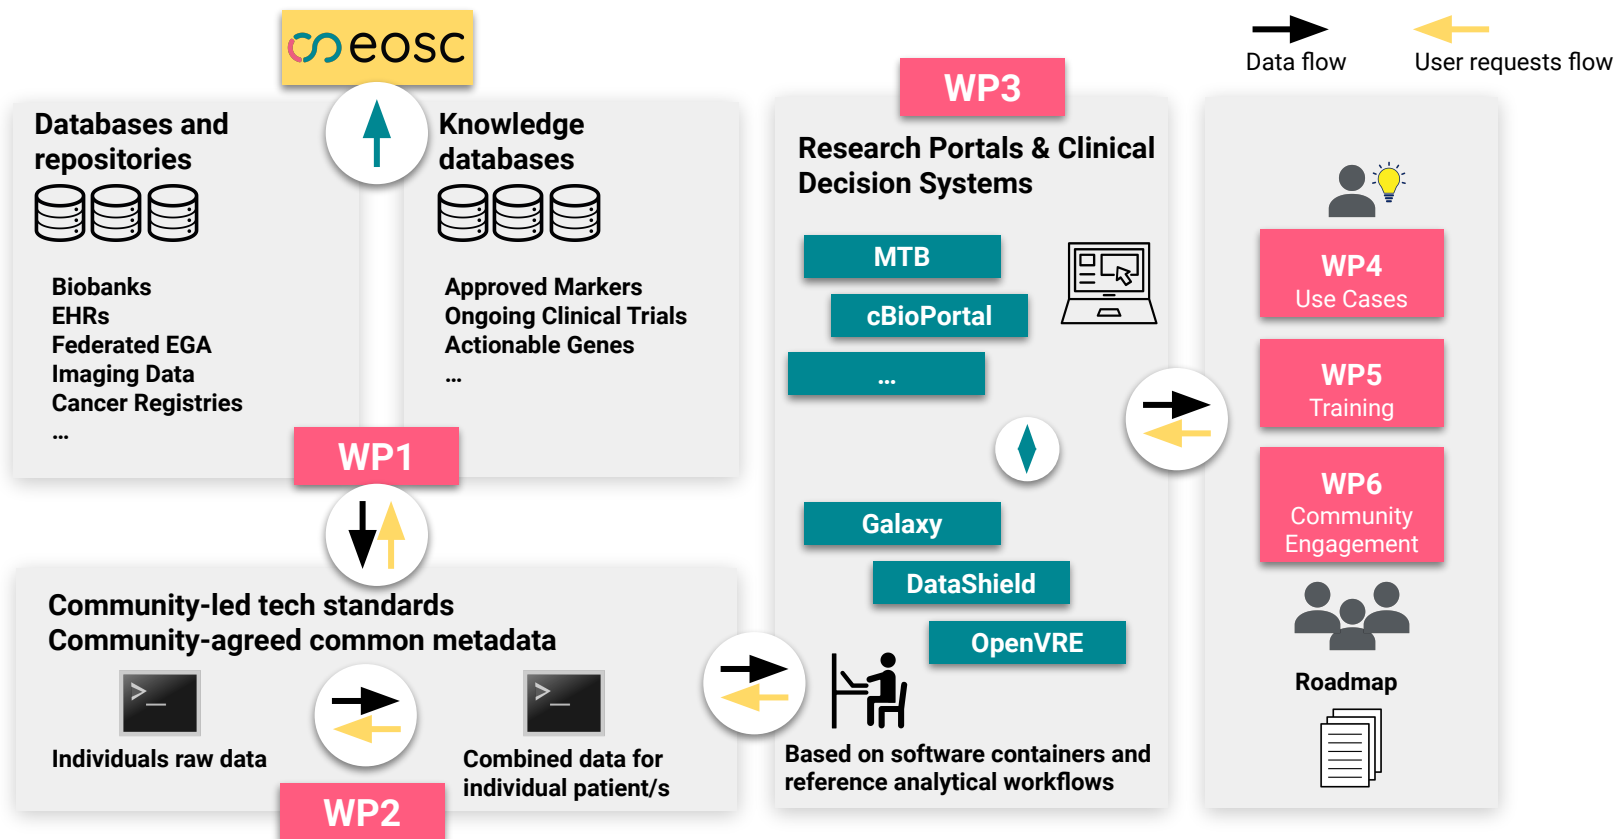

Result #3: **Cancer research data and analysis systems** made **easily accessible** to basic and clinical scientists in open cancer analysis portals.

Result #4: Integrated **digital tools, data analytics and Artificial Intelligence/Machine Learning methods** for the analysis of cancer-related data in the **cancer analysis environments**.

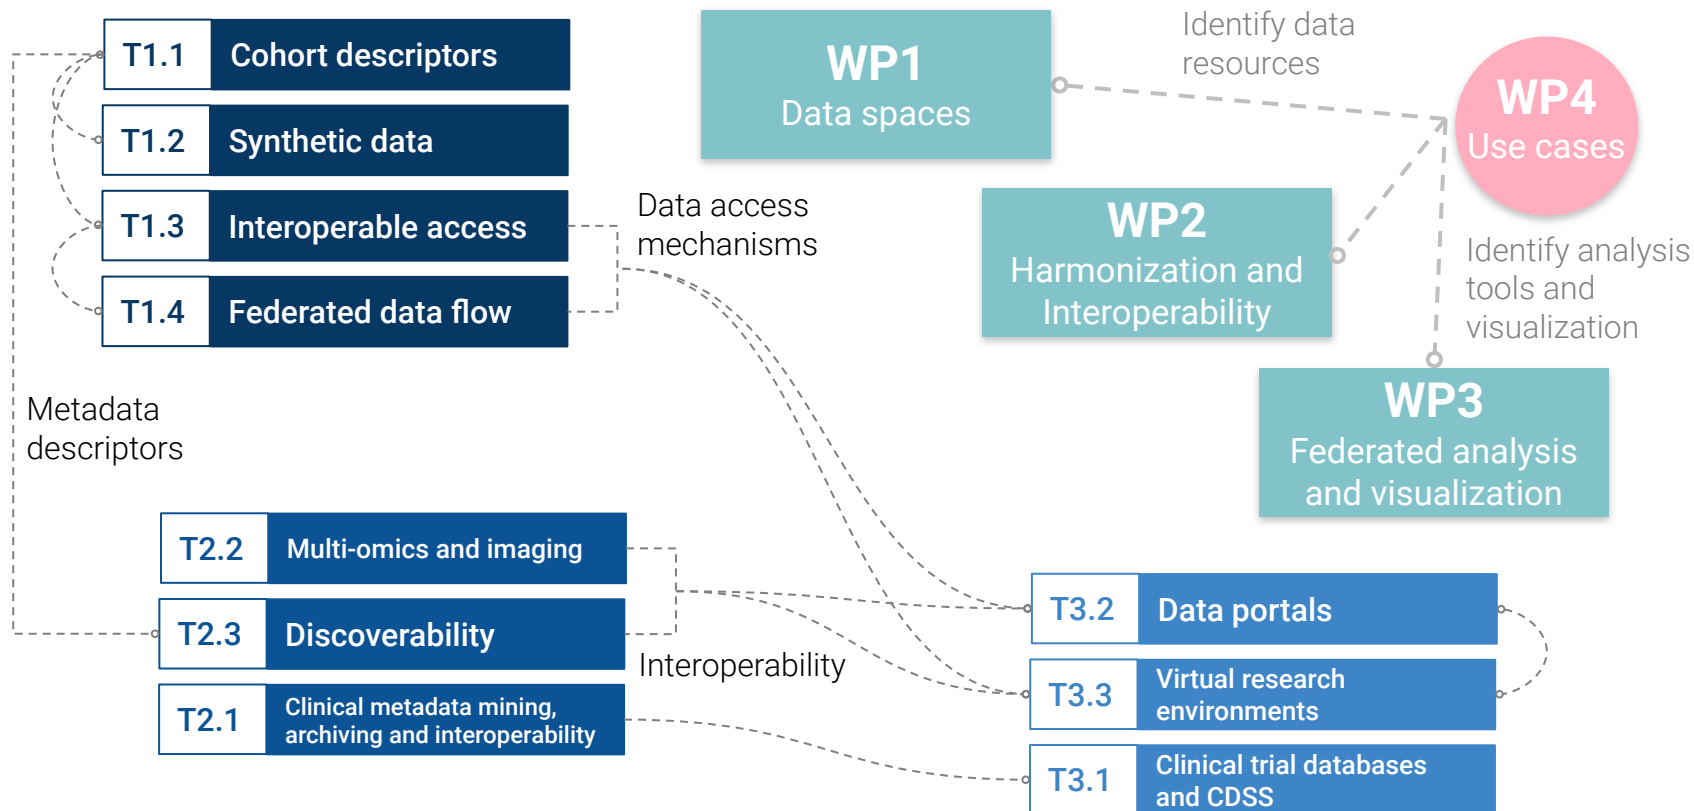

→ ***Contribute to the Horizon Europe EOSC Partnership and other relevant partnerships related to cancer research.***

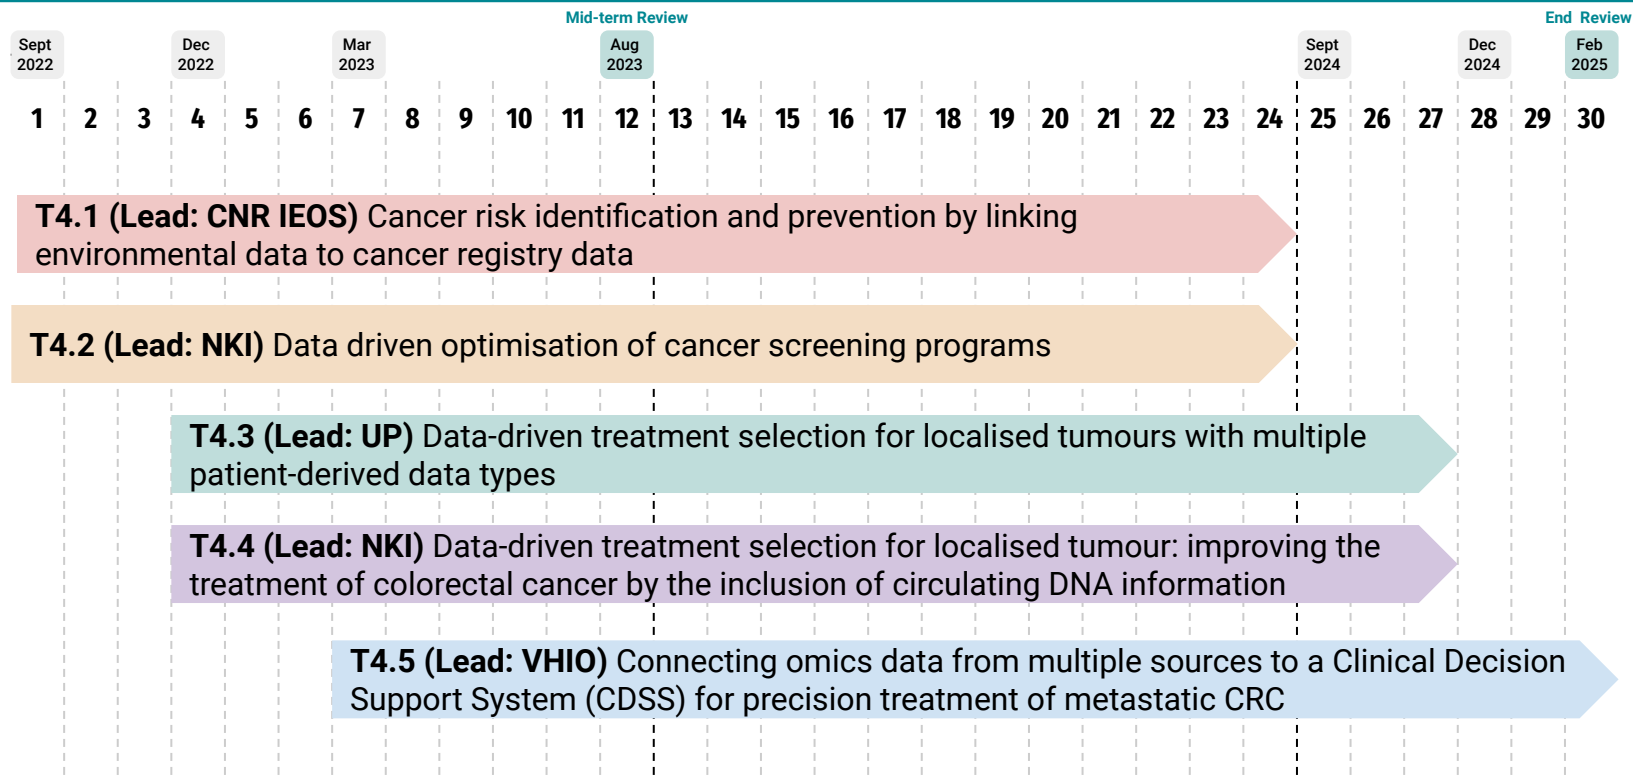

Result #5: Roadmap for EOSC support to an **European Cancer Data Space in the European Health Data Space (EHDS)** in partnership with the **Cancer Mission**. **Participation of patient/survivors associations** in the project's Stakeholder forum and in the Scientific Advisory Board together with the Ethics Advisory Board.

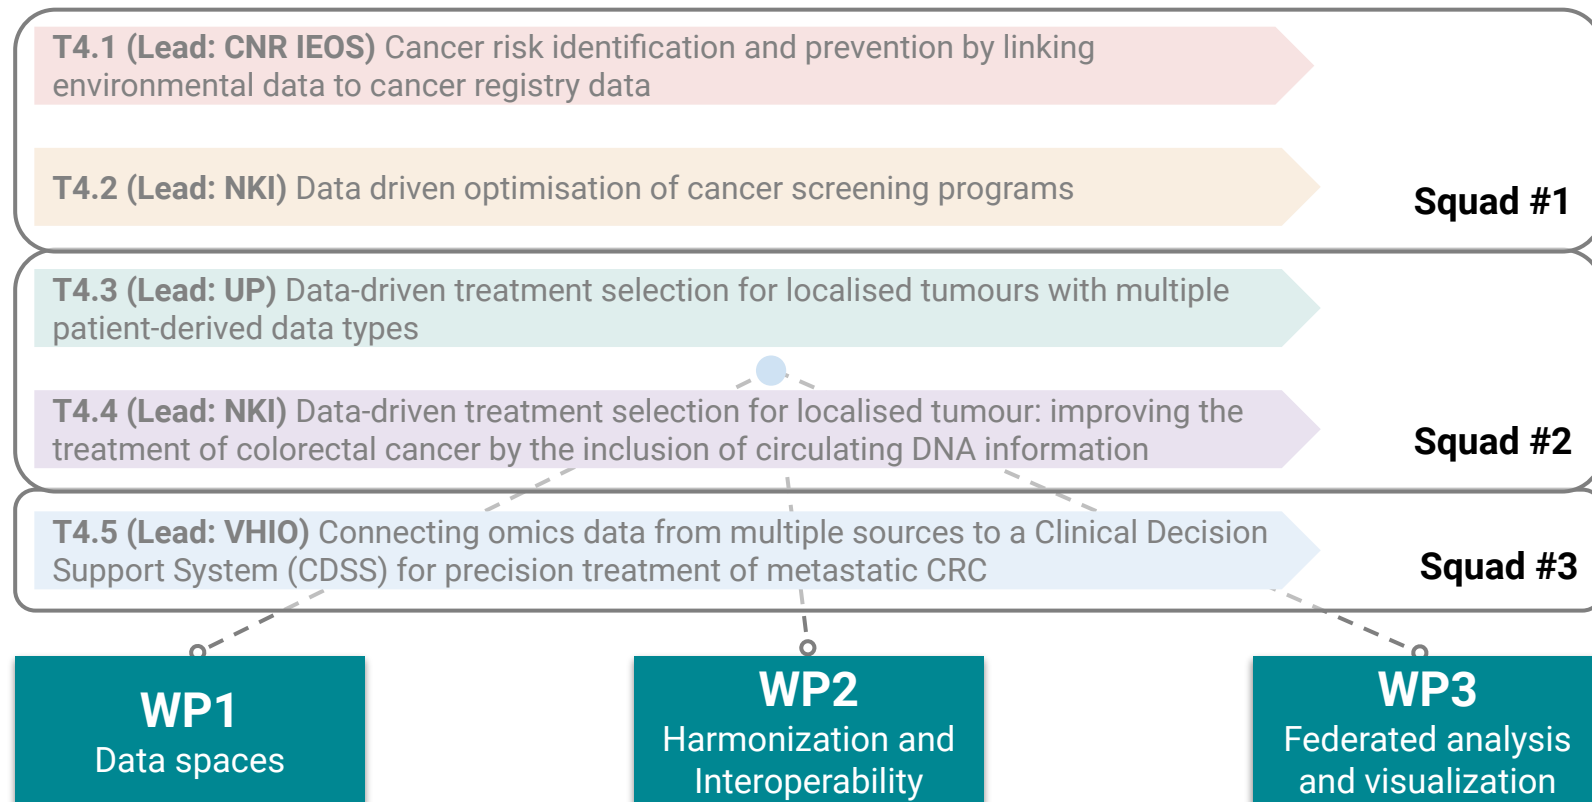

Technical WPs overview

Kick-off meeting Outcomes: Squads

- **BY-COVID** and **EOSC4Cancer** share the same conceptual architecture. Thus, lesson learnt in BY-COVID, e.g. on data access and mobilization, can be leveraged by EOSC4Cancer. Similarly, any technological development can be taken up, maintained and extended by EOSC4Cancer.
- **EuroScienceGateway** will leverage existing technologies (e.g. Galaxy, Pulsar, Dirac) and extend them to allow smart workflow execution scheduling around Europe. **EOSC4Cancer** represents the ideal scenario to tackle the challenges on analyzing sensitive data across different places.

Top 3 technical challenges

- Accessibility of cancer-related datasets
- Harmonization and interoperability of cancer-data resources and analysis systems (FAIR principles)
- Integration of digital tools, data analytics, and Artificial Intelligence/ Machine learning tools in the cancer analysis portals and federated systems

Top 3 engagement challenges

- Align and engage with with large international and EU coalitions, e.g., ICGC-Argo, GA4GH, 1+MG/B1MG, UNCAN.eu, canSERV
- Contribute to EOSC services, the European Health Data Space (EHDS) and the Cancer Mission
- Learn from and create value for five use cases following the patient journey, laying the foundation for prospective studies

- *Metadata and data quality*
- *Technical challenges on EOSC*
- **Infrastructures for quality research software**

Thank you!
