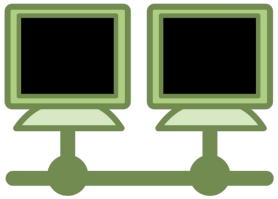
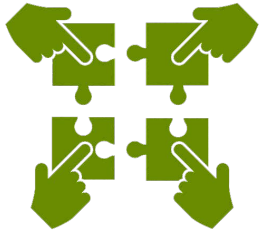
INCD

Distributed computing infrastructure

a) Federates infrastructures from Iberian research and academic organizations (PT + ES) mainly focused:
   - Cloud Computing
   - Grid Computing
   - Data Processing



b) Enables a joint participation in European initiatives including EGI and EOSC supporting research communities
   - Provides the regional operations coordination for the computing and data processing activities of several user communities including WLCG, ESFRIs and others



c) Forum for common activities and sharing of knowledge.
   - Participation in EU and cross-border projects including both R&D and infrastructure oriented projects

Iberian summit of Valladolid in Nov 2018

Valladolid, 21st November 2018

2. Na área de Computação Distribuída, os Signatários pretendem promover a colaboração nas seguintes áreas:

a) Apoiar a realização anual da conferência IBERGRID, realizada alternadamente no território de ambos os Estados dos Signatários;

b) Reforçar a colaboração entre os Signatários, com vista a otimizar e apoiar a participação da infraestrutura Ibérica IBERGRID em infraestruturas e iniciativas internacionais de computação distribuída e repositórios de dados, entre as quais se destaca o *European Open Science Cloud* (EOSC) e o *European Grid Infrastructure* (EGI);

c) Apoiar o desenvolvimento e integração de serviços temáticos de interesse para a comunidade científica a disponibilizar através da infraestrutura Ibérica IBERGRID;

d) Apoiar e fomentar a utilização da infraestrutura Ibérica IBERGRID no apoio à participação em projetos científicos estratégicos de interesse comum tais como a participação no CERN, o suporte aos ESFRIs e o AIR Center.

Assinado em Valladolid, no dia 21 de novembro de 2018, em dois originais, nas línguas portuguesa e castelhana, sendo ambos os textos igualmente válidos.

Current MoU between Governments (2018-2024)

- Support the IBERGRID conference organized annually in each of the two countries.
- Reinforce the collaboration between both countries to support the IBERGRID participation in international initiatives and infrastructures of distributed computing and digital repositories among which EOSC and EGI.
- Support the development and integration of thematic services of interest to the scientific community to be made available through the IBERGRID infrastructure.
- Support and promote the use of the IBERGRID infrastructure to support the participation in common scientific projects of strategic interest ,such as the participation at CERN, in ESFRIs and in the AIR Center.

Joins PT + ES cloud, grid and data:

AUGER

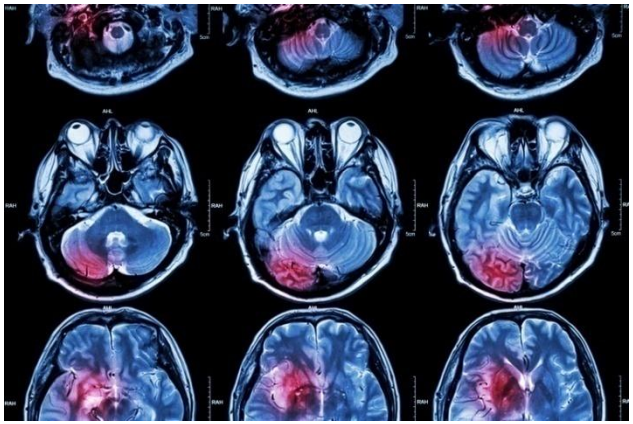
- On the vast Pampa Amarilla in western Argentina, the Pierre Auger Observatory is studying the highest-energy particles in the Universe, so-called cosmic rays.

- Cosmic rays with low to moderate energies are well understood, while those with extremely high energies remain highly mysterious. By detecting and studying these rare particles, the Pierre Auger Observatory is tackling the enigmas of their origin and existence.

12,714,524 hours in IBERGRID

Biomedicine

- medical imaging
- bioinformatics
- drug discovery.



- virtual research platforms that provide the worldwide research community with both user-friendly tools, platforms for data analysis and exchange, and an underlying e-infrastructure.

- WeNMR provides an e-Infrastructure platform and Science Gateway for **structural biology**. WeNMR serves all relevant **INSTRUCT** communities in line with the **ESFRI roadmap**.

Beyond High Throughput Computing

Expansion of the Computing Paradigms supported across the EGI Federation

	Cloud Compute	Cloud Container Compute	High Throughput Compute
What is it?	Distributed IaaS	Kubernetes on top of EGI Cloud Compute	The *grid,* a scalable batch system
What you run?	VMs	(Docker) Containers	Jobs
Typical workloads	Lift and shift existing applications Specific OS (kernel) requirements Long running servers	Cloud-native containerised applications.	Execution of parallel computing tasks to analyse large datasets.
Pros / Cons	[+] Complete control on resources, run (almost) anything you'd like [-] Complex operation	[+] Industry standard [+] Hides complexity of Kubernetes setup [-] Kubernetes steep learning curve	[+] No management of resources, just submit jobs [-] Legacy interfaces [-] Jobs may not match any computational need

Organized via the EGI Federated Cloud

- EGI FedCloud: standards-based open cloud system
- Extends the EGI computational offer beyond the traditional High Throughput Computing (Grid)
- New service models like long-lived services and on demand computation.
- Enables the **federation of institutional clouds** across multiple administrative locations

Beyond Europe

China, South Africa,...

EGI Cloud Compute

Run virtual machines on-demand with complete control over computing resources

EGI FedCloud well Positioned in SIMPL

https://digital-strategy.ec.europa.eu/en/news/simpl-cloud-edge-federations-and-data-spaces-made-simple

- **Middleware that will enable cloud-to-edge federations** and support all major data initiatives funded by the European Commission, such as common European data spaces or EOSC
- Ensure that data sets and their infrastructures can be seamlessly **interconnected** and made **interoperable**.
- **Open source, secure**: trust, confidence and compliance with EC regulations built into the system.
- **Sharing of resources** between participants, regardless of their data processing environment, across multiple providers and Member States.

EC independent study on details on the background, vision, and possible implementation of SIMPL

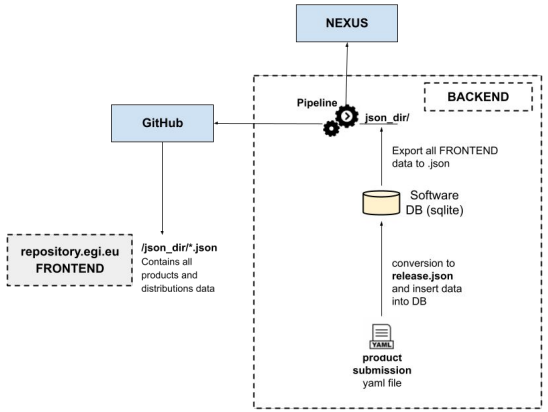
Software Quality Assurance for EGI and repositories

Quality assurance for the EGI middleware distributions for Grid (UMD) and Cloud (CMD)

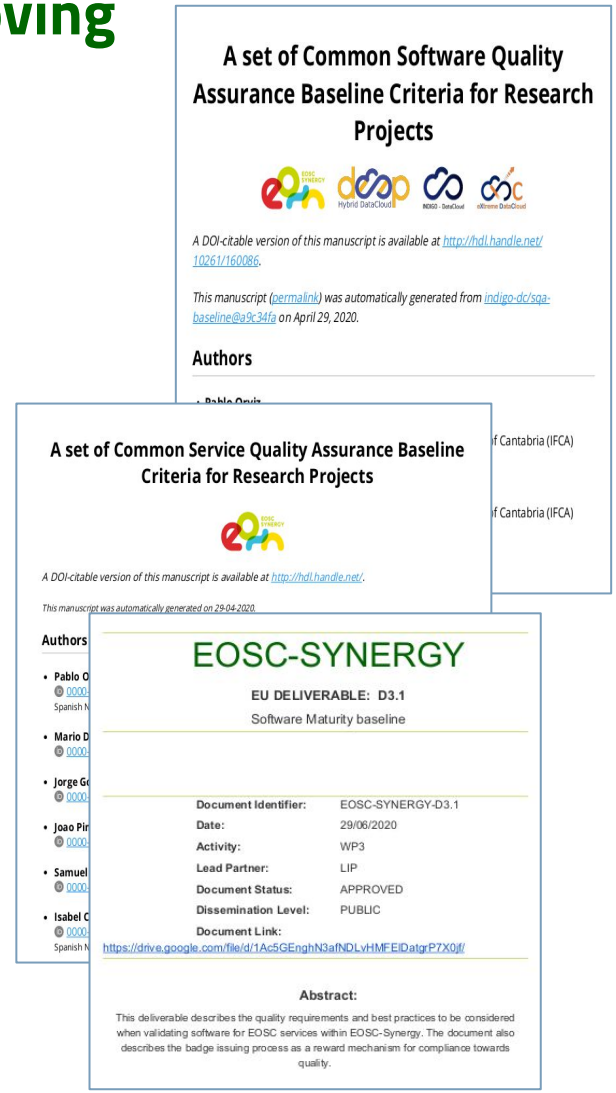
- **Production**
  - Manage the EGI software validation process.
  - Software validation of products to be released as part of CMD and UMD distributions.
  - Automated validation in isolation environments and piloting at selected sites.
- **Innovation**
  - New streamlined validation process.
  - New repositories with added capabilities.
  - New frontend.



28. Repositories for EGI
Mário David (LIP)
12/10/2022, 14:30
Development of innovati... | Lightning Talk (8' + 2' for... | IBERGRID Contributions

Long standing activity and expertise in improving research software and services

- Software baseline
  - Criteria meant to enhance the visibility, accessibility and distribution of source code.
  - Encouraging good coding practices to improve quality, reliability and security.
- Services baseline
  - Minimum set of principles for reliable and fit-for-purpose services
  - Provides common coherent quality attributes aimed to strengthening of the services reliability and stability.



The **baseline documents are openly developed** on github and open to contributions.

Software perspective incorporated to EOSC as a key enabler

https://ec.europa.eu/info/sites/default/files/prompting_an_eosc_in_practice.pdf

Members: Silvana Muscella (Chair), Isabel Campos Plasencia, George A. Komatsoulis, Andreas Mortensen, Räim, François Robida, Linda Strick, Klaus Tochtermann, Žiga Turk, Ross Wilkinson

3.2 Identification of those involved, roles, and results of their work

SOFTWARE DEVELOPERS/SERVICE PROVIDERS

Interoperable services and open data rely on the principles of software openness. The software used in EOSC services should guarantee interoperability and comply with standards, be they de facto or by right (de Jure). Data produced and handled with EOSC software services should respect the FAIR principles; services within EOSC should be secure and comply with the European authorisation and authentication policies; as a general policy, the software elements are provided upstream to open source projects, to guarantee the required level of sustainability; to provide persistent identifiers, identification scheme and machine-readable metadata about the resources.

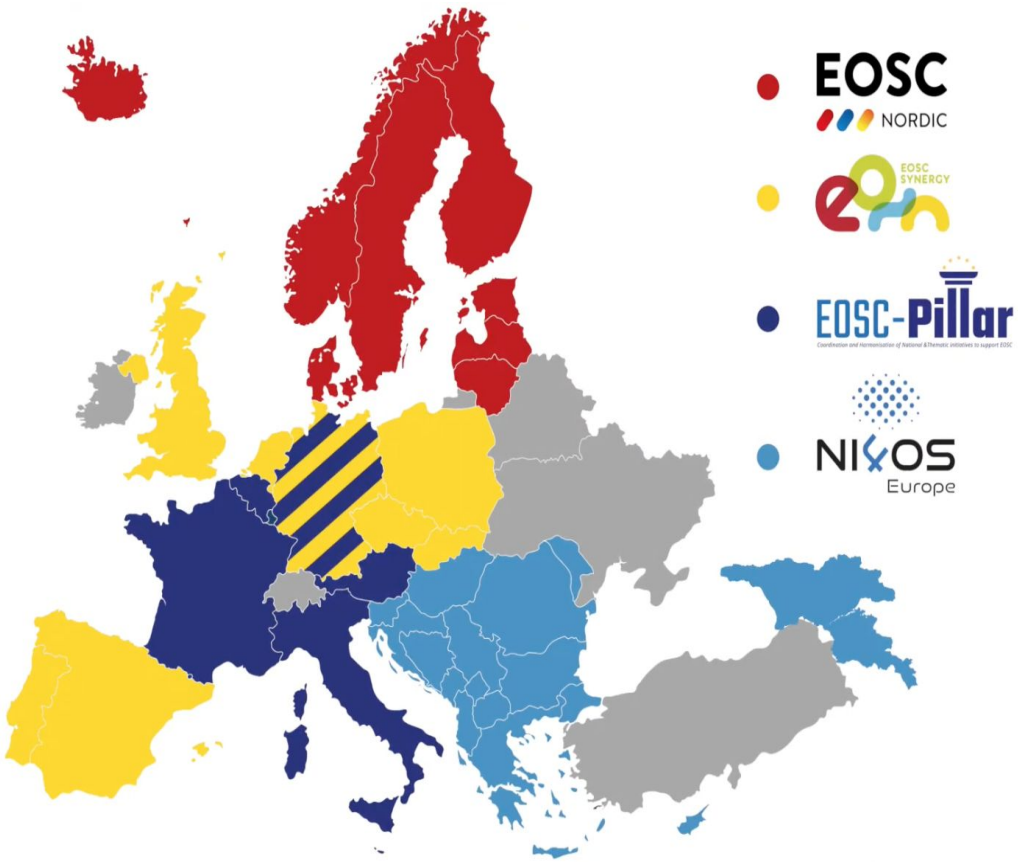
For this key activity to be successful in terms of engaging human talent, breakthrough ideas leading to innovation need to be awarded with the proper recognition. Putting in place transparent mechanisms to recognise successful software development, such as creating an ***'EOSC-Ready'* certification for software** products, would have a positive impact on the software development ecosystem in Europe. The successful development of an *'EOSC-Ready'* branded software product, would improve the reputation of researchers and technologists and dynamically harness the potential of European developers, across academia and industry.

Software could have different levels of service management integration. Highly integrated services are operated according to the EOSC service management system. Medium integrated services run with a more mature service management framework. Low integrated run with a less mature service management framework.

Final report and recommendations of the Commission 2nd High Level Expert Group [2017-2018] on the European Open Science Cloud (EOSC)

EOSC integration model

Regional EOSC implementation projects



- **EOSC-Nordic:** www.eosc-nordic.eu
- **EOSC-Synergy:** www.eosc-synergy.eu
- **EOSC-Pillar:** www.eosc-pillar.eu
- **NI4OS:** www.ni4os.eu

Funded by the European Commission to work on:

- Harmonization of integration procedures
- Expansion of National Thematic services to EOSC
- Development of skills
- Raise awareness on EOSC at national level
- Work with Policy makers

Duration: Sept. 2019 - Oct. 2022

EOSC-synergy widely exploitable results

Looking to Horizon Europe

Three main lines of activity

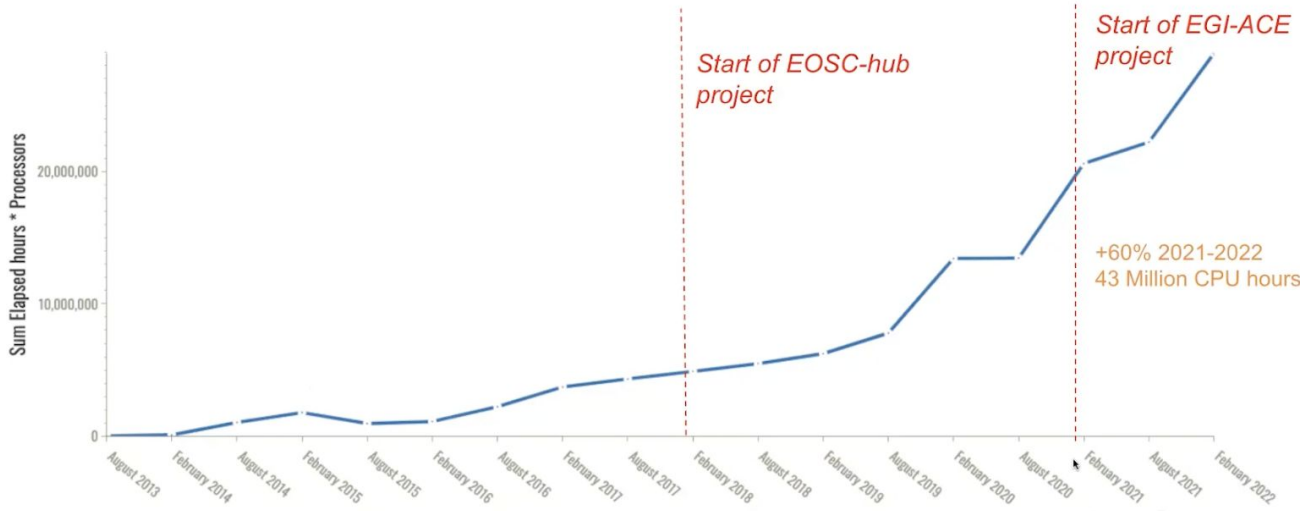
→ New research lines in the area of **Digital Twins**

→ **Software and Service Quality**: evolution of EOSC-Synergy.

Role of IBERGRID/EGI as part of the **EOSC Compute platform**

→ Provision of advanced services and Virtual Access support in EGI-ACE
→ Provisioning IaaS level
→ Procurement of Services for EOSC

EOSC Compute



https://www.egi.eu/project/egi-ace

EGI-ACE

Jan. 2021 - Sep. 2023

Advanced Computing for EOSC

EGI-ACE is a 30-month project coordinated by the EGI Foundation with a mission to empower researchers from all disciplines to collaborate in data- and compute-intensive research through free-at-point-of-use services.
EGI-ACE receives funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 101017567.

Apply for EGI-ACE sponsored services

Jan 2018 - Mar. 2021

EOSC-hub

Services for the European Open Science Cloud

EOSC-hub brought together multiple service providers to create the Hub: a single contact point for European researchers and innovators to discover, access, use and reuse a broad spectrum of resources for advanced data-driven research.

Website

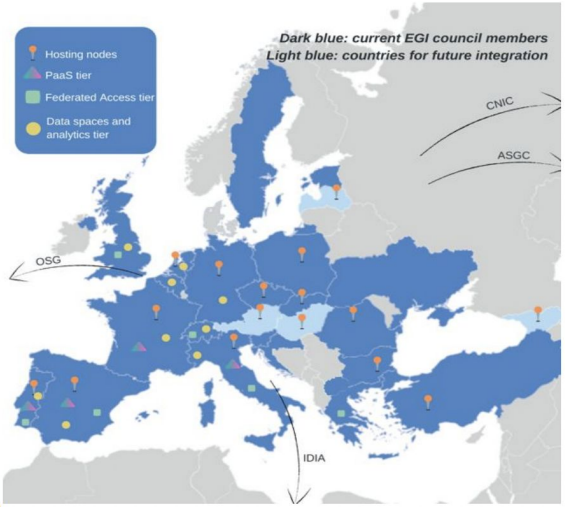
IBERGRID

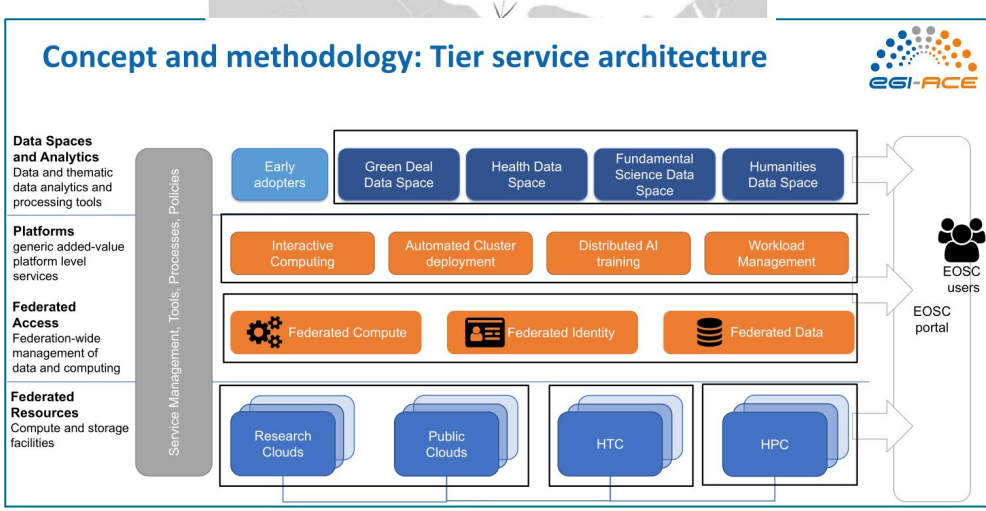
EGI-ACE

Piloted with the EGI Federated Cloud

EGI-ACE (2021-2023) **Advanced Computing for EOSC**, with IBERGRID work focused on:

- Software management, thematic services.
- HPC integration
- Provisioning and support of cloud services based on Virtual Access costs
- Software management for EGI.
- Implement EGI software repositories
- Implement new Data Spaces





Digital Twins

Digital Twin:
Digital replica of a living or a non-living physical entity.

→ Develop IT frameworks (Software + Infrastructures+Data Spaces) that provide advanced modelling, simulation and prediction capabilities to Research Infrastructures and their research communities

→ Promoting a convergent use of advanced digital technologies such as high performance computing, software, AI methods and big data analytics.

But… we have been doing this for a long time isn´t it?

To some extent: we have the building blocks, but there is integration ahead….

Digital Twins: we saw this one coming…

- Integrating computing resources that are geographically distributed
- Integration and use case engineering
- Collaboration across different scientific domains
- Robust framework enabling Researchers to ensure the quality, reliability, verifiability of their outputs

Quality

Reliability

Complex use cases combining:

Simulations & Observations &

Diverse data from various and distributed sources.

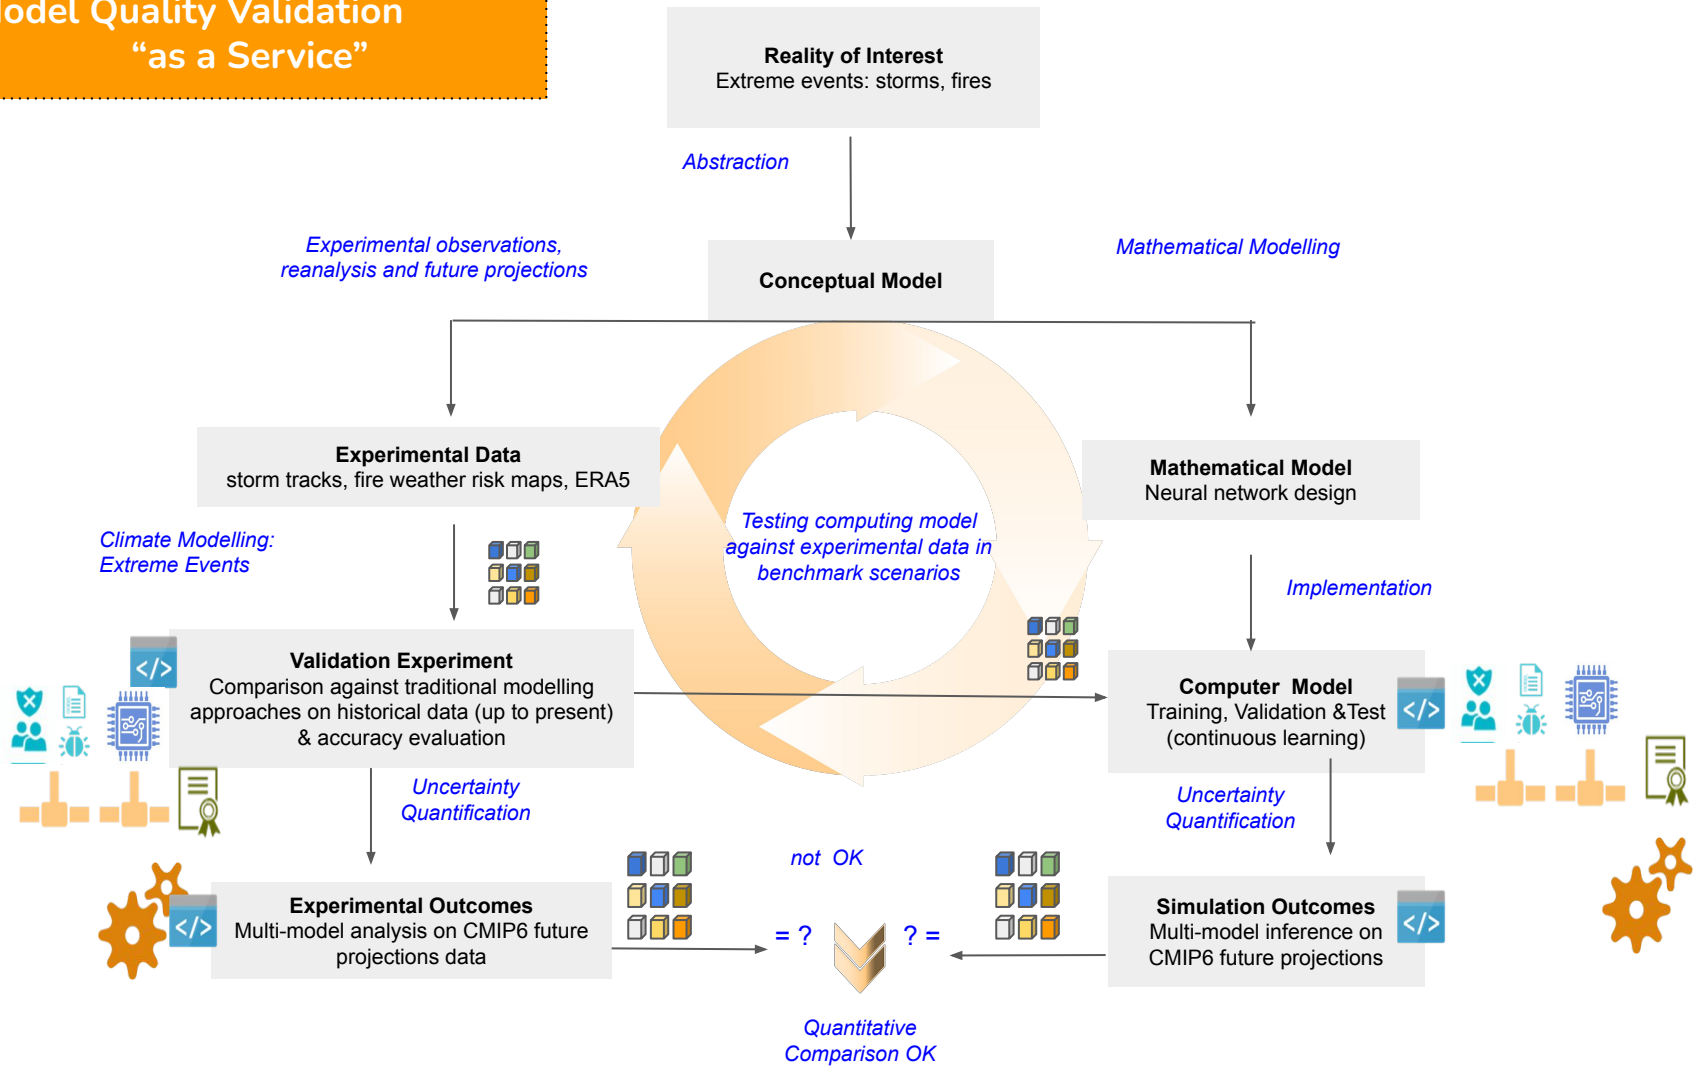
Software

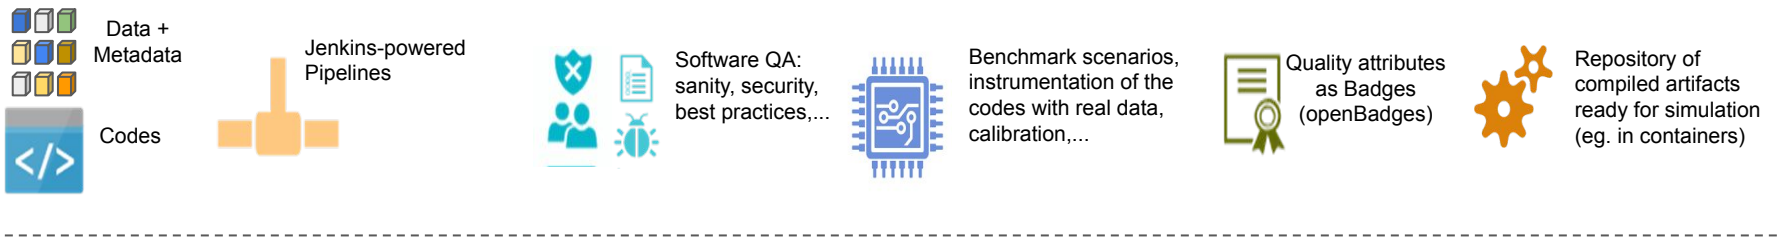
Data

Verifiability

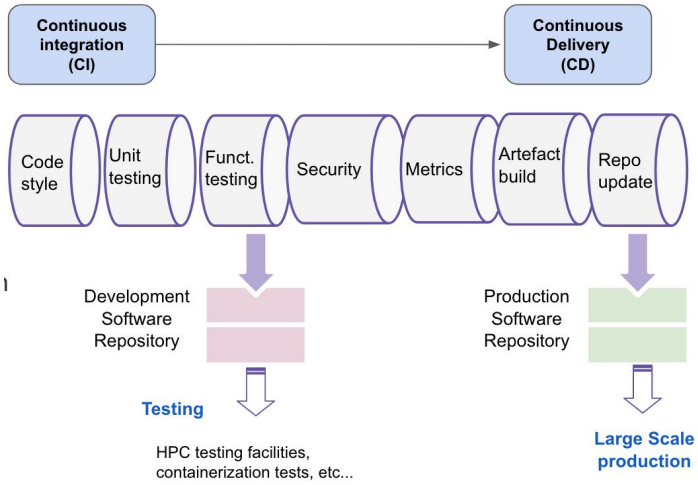
Outputs

Model Quality Validation "as a Service"





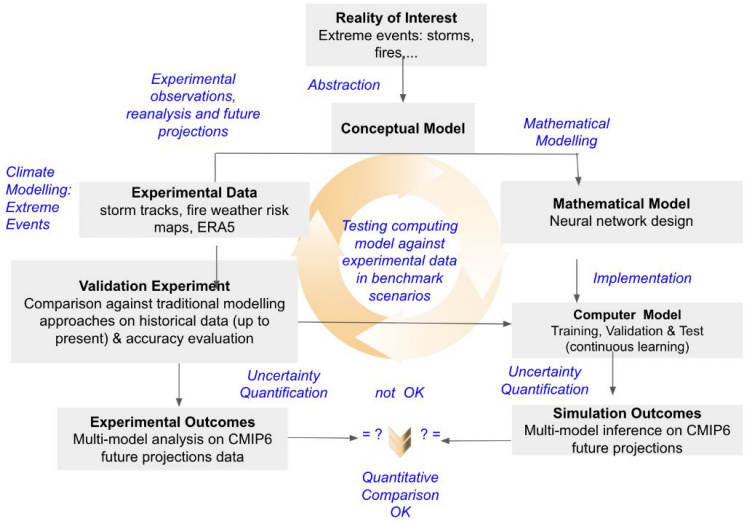
- Applying our background to the implementation of Digital Twins
- Extend the quality work done for software, services and data to models when possible (automation permitting)



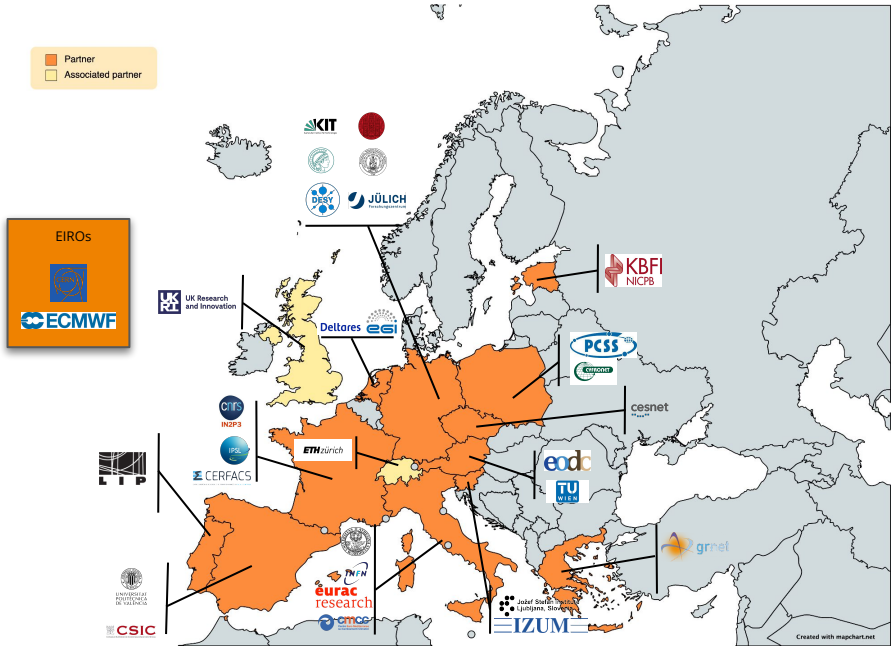
Model Validation

- Highly problem dependent, and high level of expertise required
- Sources of experimental data to compare with,
- Which level of automation can be applied

CHALLENGING !



interTwin



Co-design and **implement** the prototype of an **interdisciplinary Digital Twin Engine**

An open source platform based on open standards that offers the capability to integrate with application-specific Digital Twins

High Energy Physics, Radio Astronomy, Climate Change, Extreme weather...

(Plenary Session on Digital Twins on Thursday)

(Plenary Session on Digital Twins on Thursday)

Looking ahead

The scale of our challenge is great and the road will be long

We might appear (sometimes) like people of improbable hope, but….

- We know about technology and its applications to science
- We have the resolve to move forward,
- … and a vision into the future of computing technology and science applications

We are the heirs of visionary persons who paved the road to strength cooperation at the Iberian level

Continue supporting excellent research in the Iberian area
