

SQAaaS - Quality assessment & Awarding

Wednesday, 27 September 2023 14:00 (20 minutes)

The Software Quality Assurance as a Service (SQAaaS[1]) platform tackles both objectives. The web-based interface ensures that no previous expertise is required for composing the fundamental building blocks, the pipelines supported by JePL library, which define the workflow that drives the validation and verification of the software and services.

This demonstration will show how the SQAaaS Quality assessment & Awarding module can be easily used to assess and validate the quality of research software.

Primary authors: ORVIZ FERNÁNDEZ, Pablo (IFCA-CSIC); BERNARDO, Samuel (LIP)

Presenter: ORVIZ FERNÁNDEZ, Pablo (IFCA-CSIC)

Session Classification: IBERGRID Contributions with Demonstrations

Track Classification: Quality of software, services and data
