

SQAaaS - Pipeline as a service

Wednesday, 27 September 2023 14:20 (20 minutes)

The Software Quality Assurance as a Service (SQAaaS[1]) platform tackles both objectives. The web-based interface ensures that no previous expertise is required for composing the fundamental building blocks, the pipelines supported by JePL library, which define the workflow that drives the validation and verification of the software and services.

This demonstration will show how the Pipeline as a service module can be easily used to create and execute quality pipelines for research software.
