Usage of Federated Clouds in secure environments

Tuesday, 29 October 2024 11:00 (30 minutes)

This tutorial provides a comprehensive guide on efficiently and securely managing applications and services in a Federated Cloud environment. Users will learn how to:
- Retrieve and use access tokens without exposing them in plaintext
- Manage computing resources within the Federated Cloud
- Leverage cloud-native tools in a federated ecosystem
- Configure TLS access to services using Dynamic DNS
- Deliver secrets to applications and services securely
