

TOMAR. Monitoring.

- **MOTIVATION.** Check if we can run on pure Freon, which has implications on DAQ box (Do we need to house GAS distribution to operate outdoor?)
- **STATUS.** Fully monitored. Charge, Eff and other parameters.
- **HELP** on graphana implementation
Self trigger (quite sensitive) implementation not done yet.

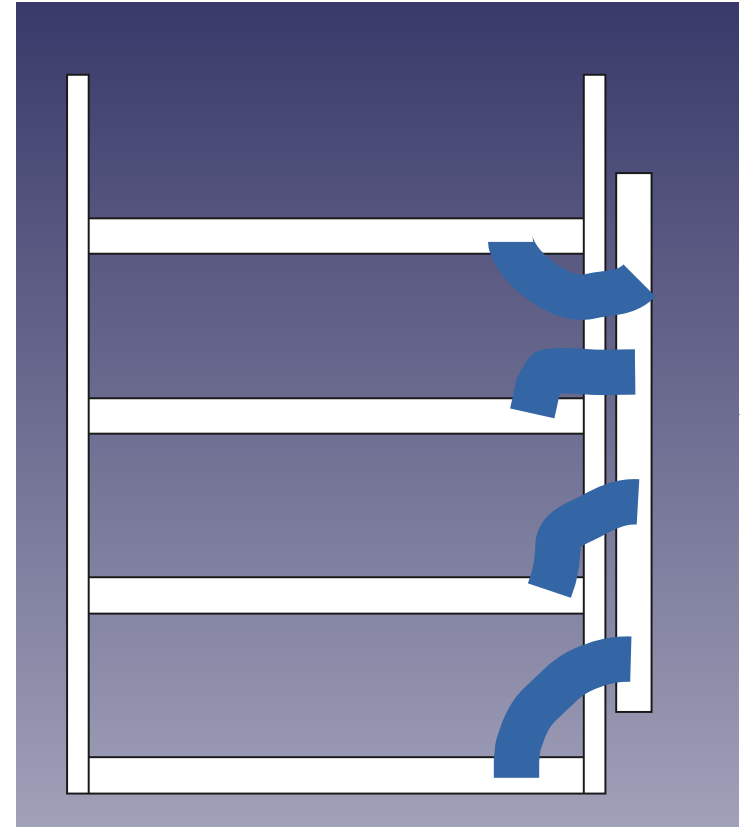

TOMAR. Design.

- Mechanical Engineers have no all the **modifications** needed for TOMAR planes. They are working on that.
- I started thinking on the DAQ box and the telescope structure.

Dummy DAQ box, with TRB3, PC, PS
And feedthroughs.

TOMAR. Project.

- First project report done corresponding to the first 6 months.
