Rui Martins

SNAPSHOTS

EFTfitter

Castro, Erdmann, Grunwald, Kröninger, Rosien :: Eur.Phys.J. C76 (2016) 432

The EFT approach

- Extend the SM electroweak Lagrangian:

$$\mathcal{L}_{\text{eff}} = \mathcal{L}_{\text{SM}} + \sum_i \frac{c_i}{\Lambda_{\text{NP}}^2} O_i + \mathcal{O}\left(\frac{1}{\Lambda_{\text{NP}}^3}\right)$$

- Searches for BSM physics: what if $\Lambda_{\text{NP}} \gg \sqrt{s_{\text{LHC}}}$?

- EFT: → indirect search for new physics
 - can test whole classes of BSM models at once
 - widen search radius by increasing the energy frontier

EFT in the top-quark sector

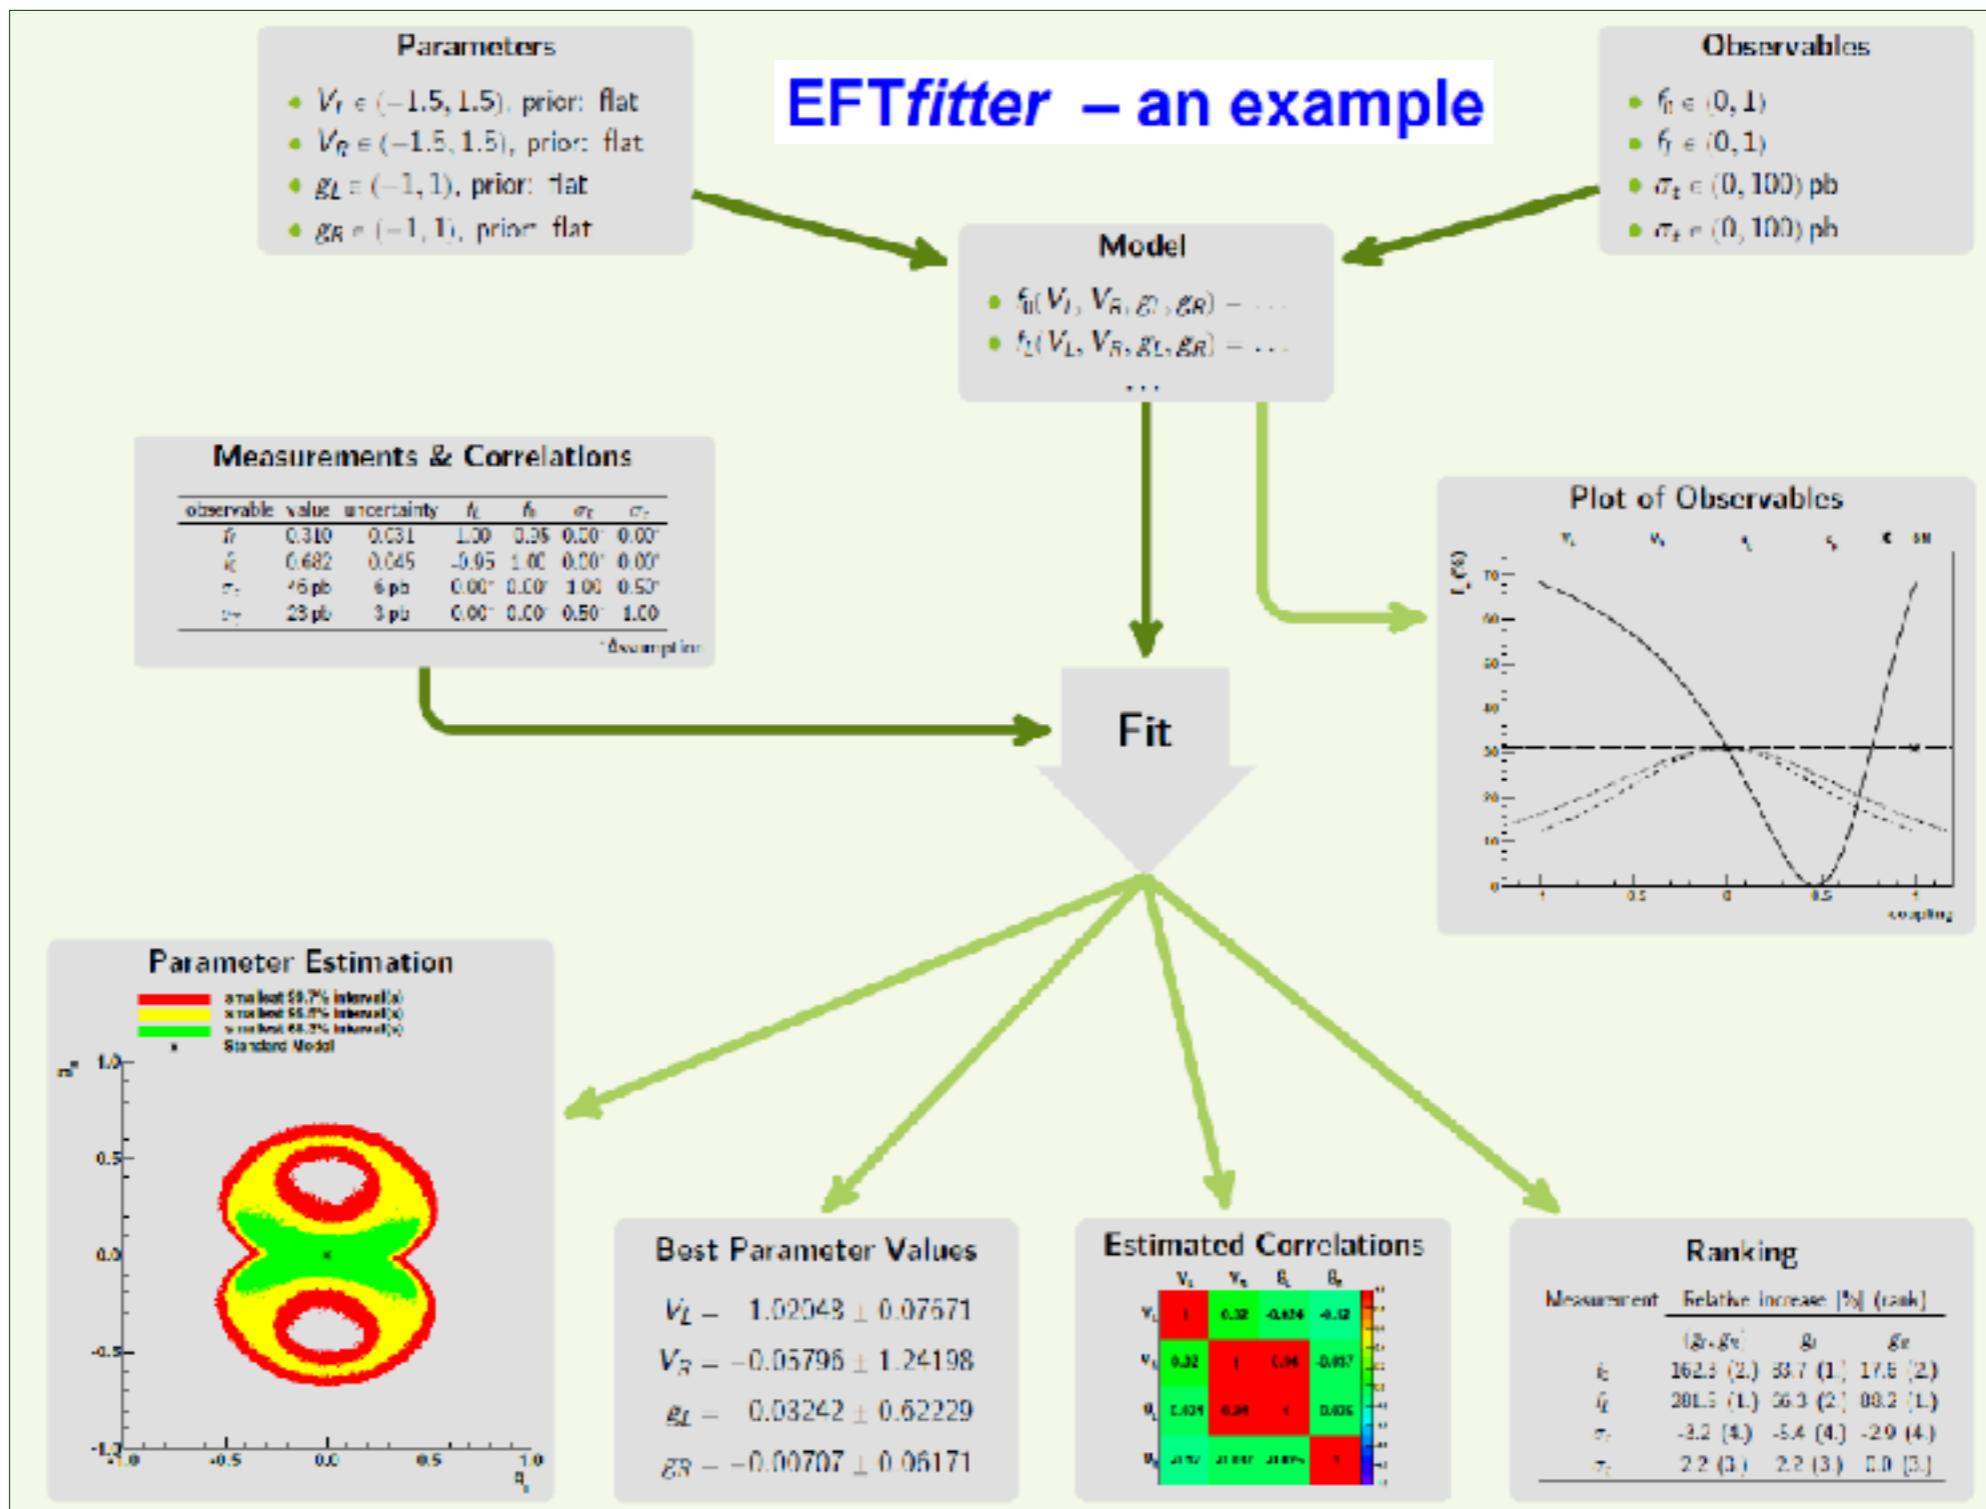

Four-quark operators	Two-quark operators	Two-quark-two-lepton operators	
$O_{qq}^{1(ijk)} = (\bar{q}_i \gamma^\mu q_j)(\bar{q}_k \gamma_\mu q_l),$	$\mathcal{O}_{u\varphi}^{(ij)} = \bar{q}_i u_j \tilde{\varphi} (\varphi^\dagger \varphi),$	$O_{lq}^{1(ijk)} = (\bar{l}_j \gamma^\mu l_j)(\bar{q}_k \gamma^\mu q_l),$

Composite Higgs Models

Composite Higgs models

- Collaboration between LIP, IPPP-Durham and Granada
 - These models often predict new vector-like quarks
 - (ongoing searches under LIP responsibility in ATLAS)
 - Important to fully explore the full parameter space
 - Alternative production and decay mechanisms
 - → new interpretations and analysis strategies

- Maria Ramos started her PhD at LIP-Minho (and IPPP-Durham) and will focus on collider phenomenology of CHM, as well as their potential astrophysical signals
 - Study of viable dark matter candidates at the LHC

Higgs production and couplings

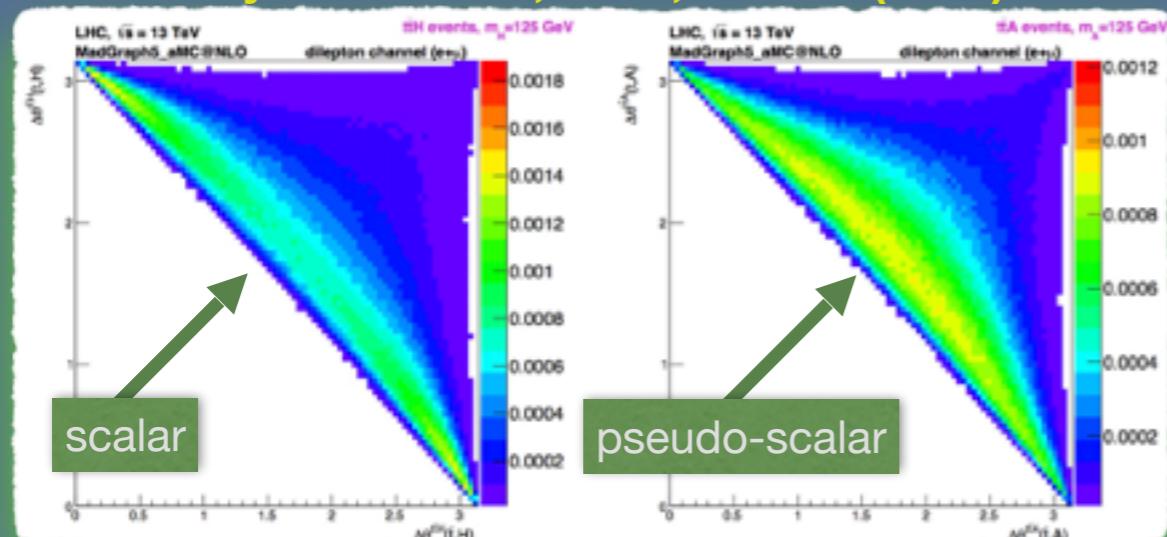

Amor Dos Santos et al. :: Phys. Rev. D 96 013004 (2017)
Broggio, Ferroglia, Fiolhais, Onofre :: Phys. Rev. D 96 073005 (2017)
Azevedo, Filthaut, Gonçalo, Onofre :: arXiv:1711.05292 [hep-ph]

TOP QUARK HIGGS BOSON ASSOCIATED PRODUCTION @ LHC:

1) ttH dileptonic channel:

NEW ANGULAR DISTRIBUTIONS EXPLORED

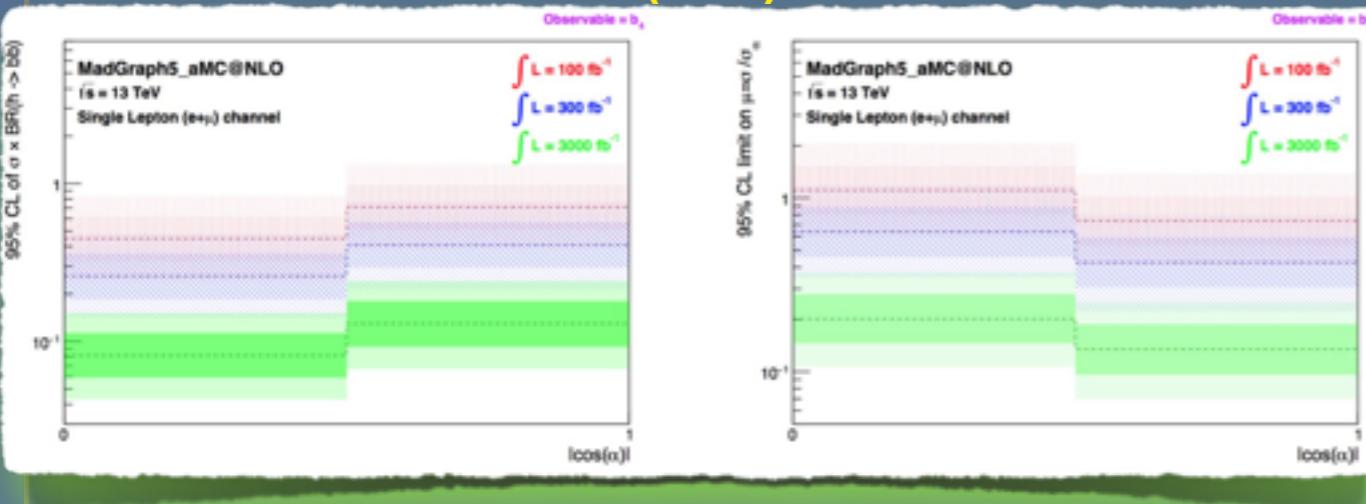

Phys. Rev. D 96, no. 1, 013004 (2017)

2) ttH semileptonic channel:

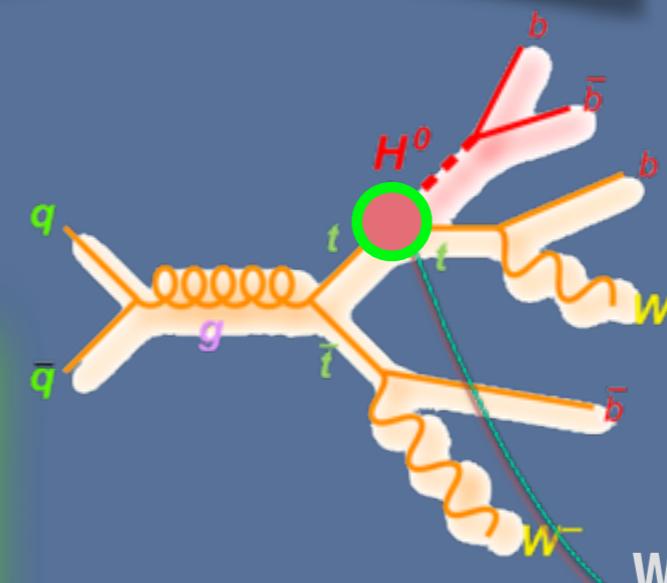

arXiv:1711.05292 (2017)

LIMITS @ 95% CL

WORK PLAN (2018): STUDY THE NATURE OF THE COUPLING @
HL-LHC, HE-LHC AND FCC-HH

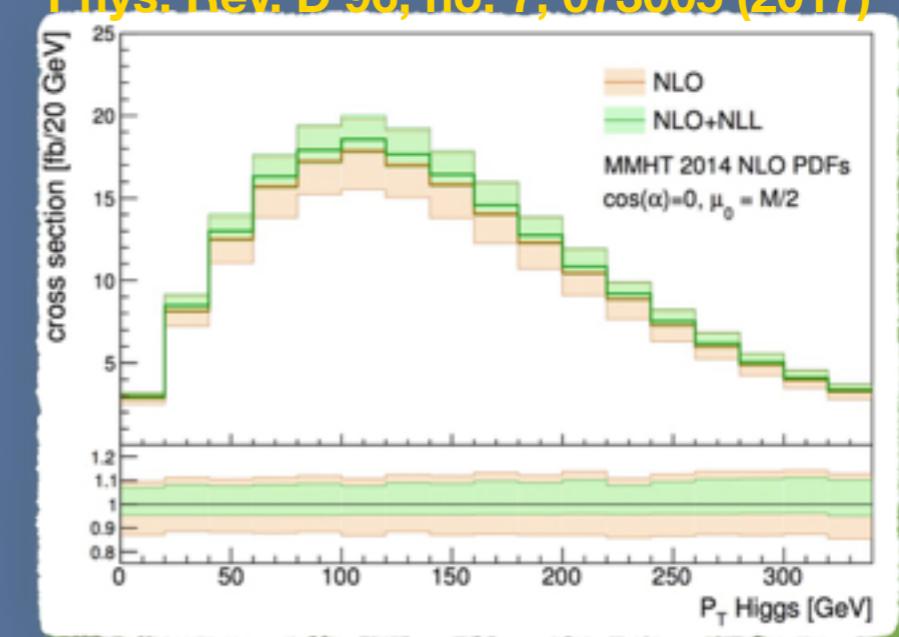

$$\mathcal{L} = \kappa y_t \bar{t} (\cos \alpha + i \gamma_5 \sin \alpha) t h$$

WHY STUDYING THE COUPLING?
IT JUST HAPPENS WE WANT TO KNOW WHERE WE LIVE...!

3) NLO vs NLO+NLL @ LHC

Phys. Rev. D 96, no. 7, 073005 (2017)

A.ONOFRE (UM)

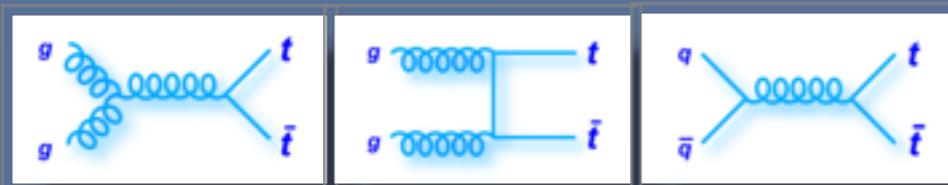

Anomalous top quark couplings

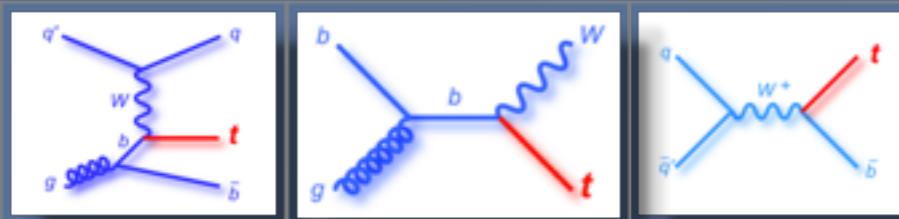

Déliot, Faria, Fiolhais, Lagarelos, Onofre, Pease, Vasconcelos :: Phys. Rev. D97 (2018) 013007

CHOICE OF PHYSICS CHANNELS:

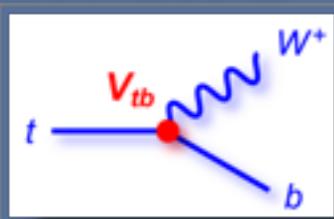

1) DOUBLE TOP QUARK PRODUCTION:

2) SINGLE TOP QUARK PRODUCTION:

COMMON FEATURE:

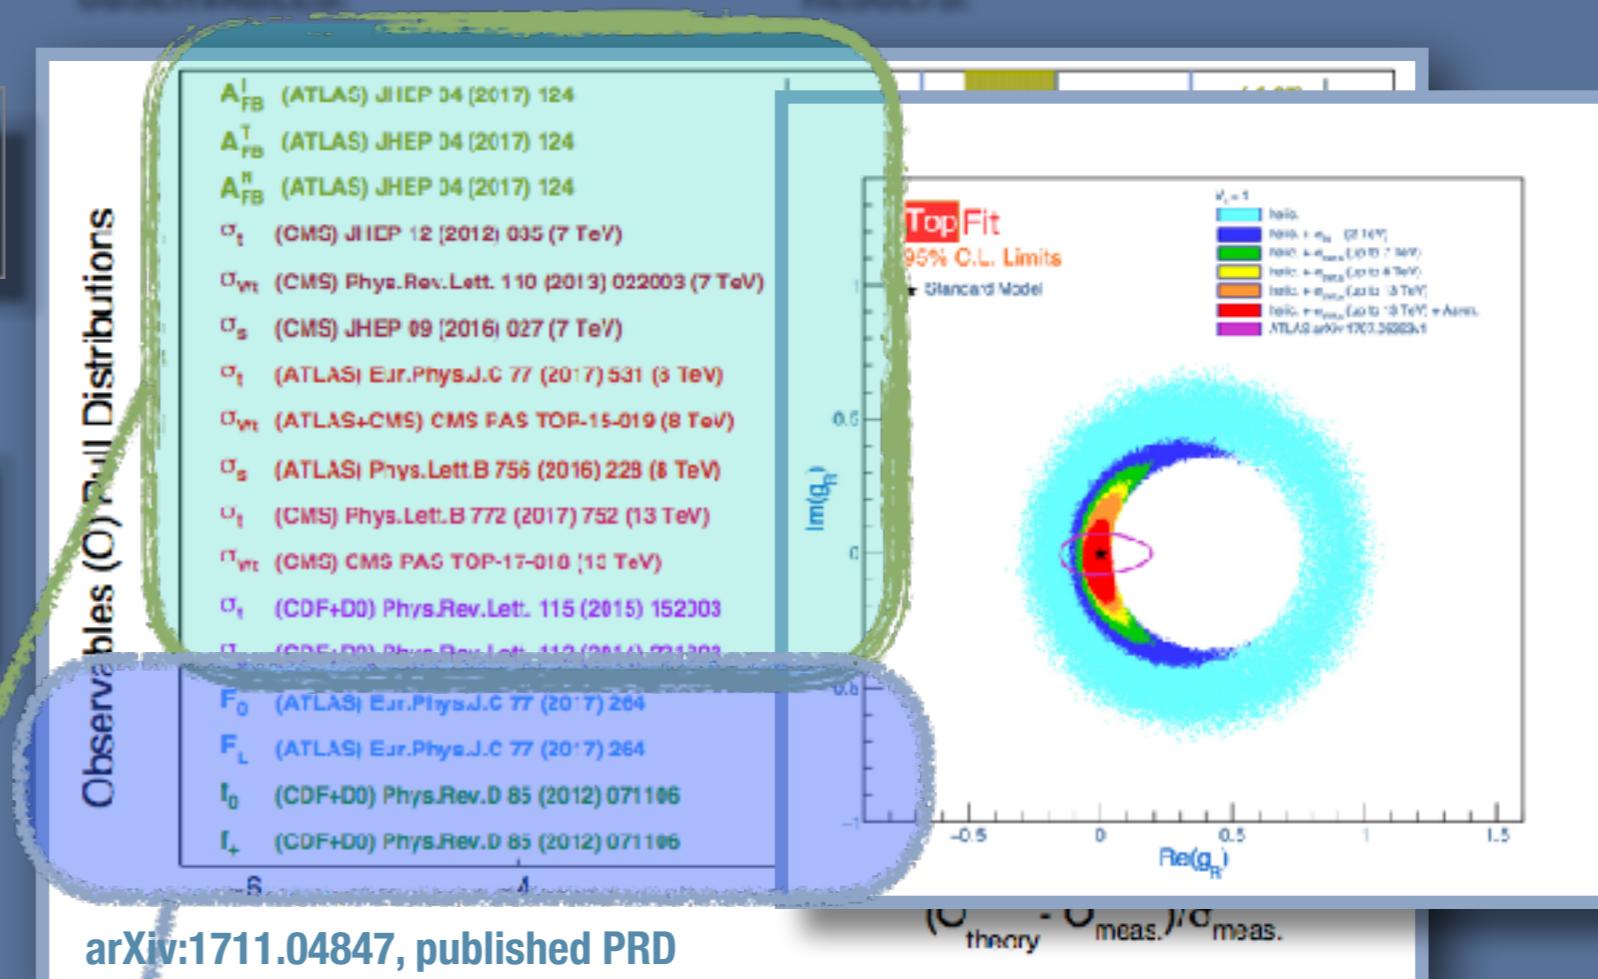

FROM THE EXPERIMENTAL SIDE:

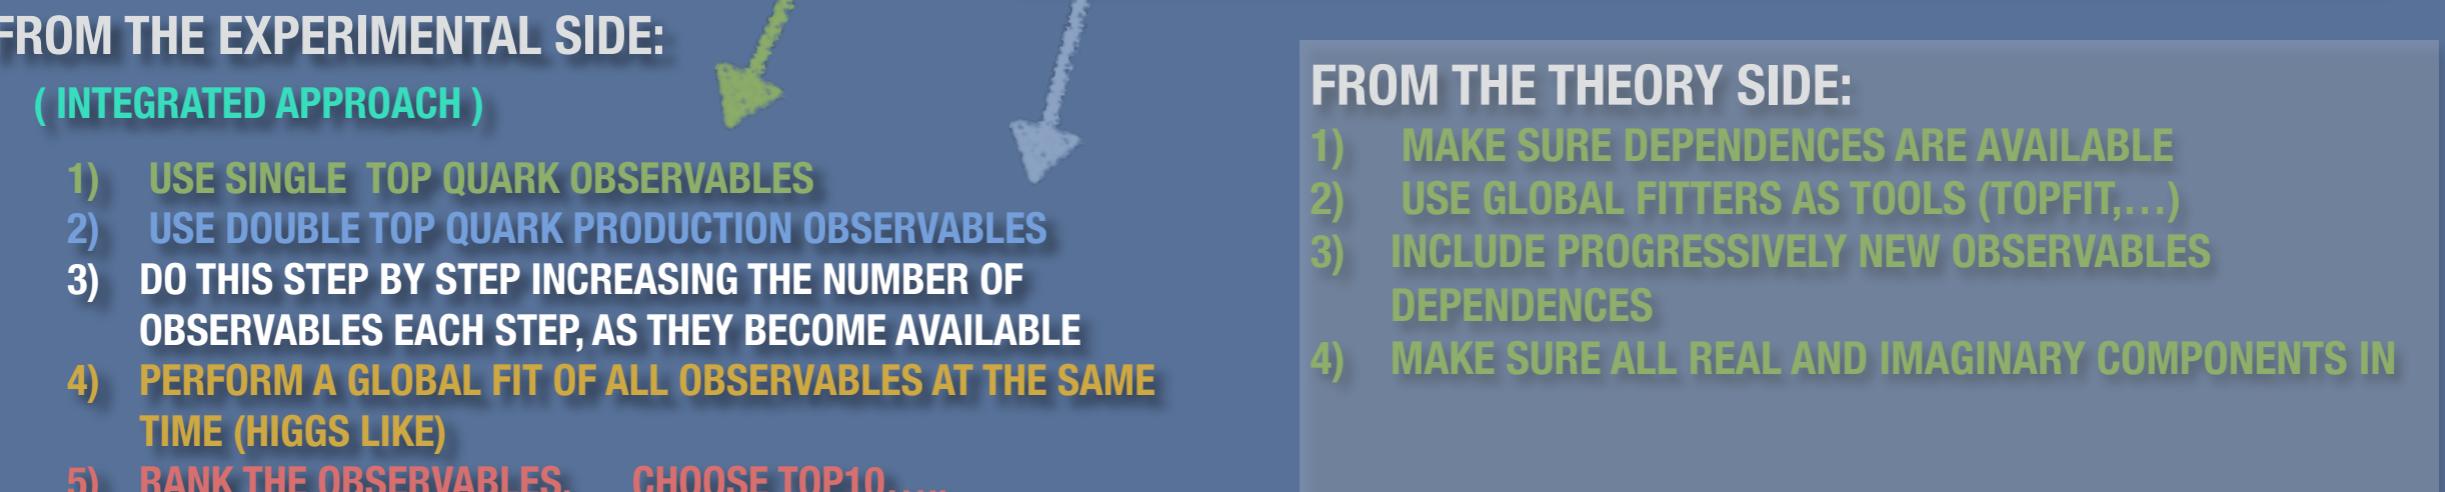

(INTEGRATED APPROACH)

- 1) USE SINGLE TOP QUARK OBSERVABLES
- 2) USE DOUBLE TOP QUARK PRODUCTION OBSERVABLES
- 3) DO THIS STEP BY STEP INCREASING THE NUMBER OF OBSERVABLES EACH STEP, AS THEY BECOME AVAILABLE
- 4) PERFORM A GLOBAL FIT OF ALL OBSERVABLES AT THE SAME TIME (HIGGS LIKE)
- 5) RANK THE OBSERVABLES, CHOOSE TOP10....

OBSERVABLES:

RESULTS:

MONTE CARLO SAMPLES AND TOOLS NEEDED:

1) FOR HL-LHC:

★ TTBAR OBSERVABLES:

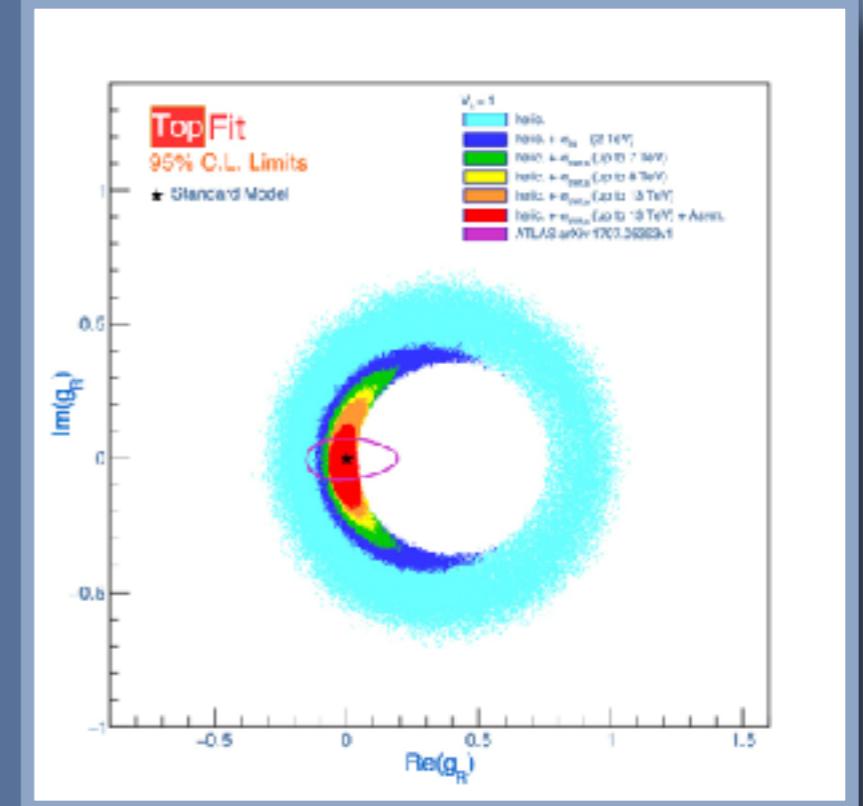

SIGN = TTBAR (SM) SAMPLES (PROTOS SAMPLES ?) AND
BCK = SINGLE TOP (ALL 3 CHANNELS), V+JETS (V=W,Z), DI-BOSON

★ SINGLE TOP OBSERVABLES:

SIGN = SINGLE TOP (SM) SAMPLES (ALL 3 CHANNELS) AND
BCK = TTBAR, V+JETS (V=W,Z), DI-BOSON

★ SCALING TO HIGH LUMINOSITY BASED ON STATISTICS PROBABLY USED

RESULTS:

2) FOR HE-LHC (27 TEV) AND FCC-HH(100TEV):

WOULD NEED BASICALLY THE SAME THING FOR 27-100TEV

★ TTBAR OBSERVABLES:

SIGN = TTBAR (SM) SAMPLES AND
BCK = SINGLE TOP (ALL 3 CHANNELS), V+JETS (V=W,Z), DI-BOSON

★ SINGLE TOP OBSERVABLES:

SIGN = SINGLE TOP (SM) SAMPLES (ALL 3 CHANNELS) AND
BCK = TTBAR, V+JETS (V=W,Z), DI-BOSON

3) TOOLS:

INPUT FROM THEORY MANDATORY !!!

★ FITTERS:

TOPFIT HAS BEEN USED
NEW TOOLS AVAILABLE

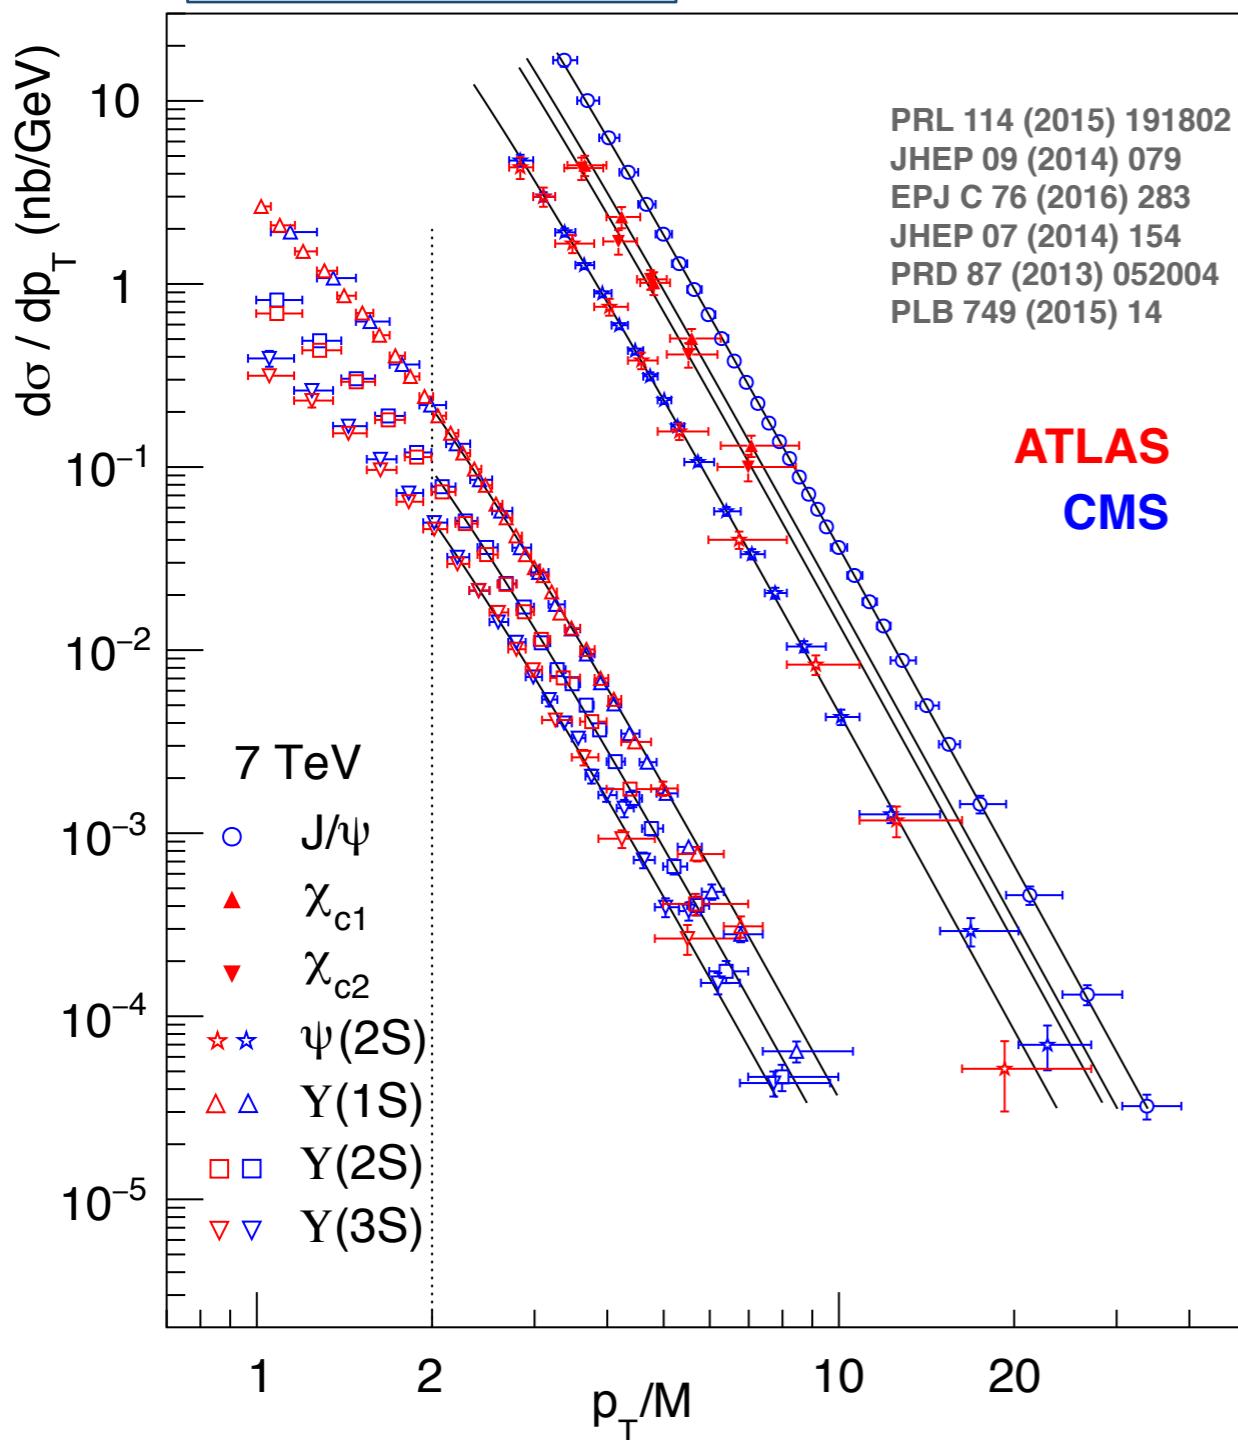

heavy quarkonium

Faccioli, Lourenço, Araújo, Knünz, Krätschmer, Seixas :: Phys. Lett. B 773, 476 (2017)
Faccioli, Lourenço, Araújo, Knünz, Krätschmer, Seixas :: arXiv:1802.01106 [hep-ph]
Faccioli, Lourenço, Araújo, Seixas :: Eur. Phys. J. C 78, 118 (2018)

Unexpectedly simple data patterns

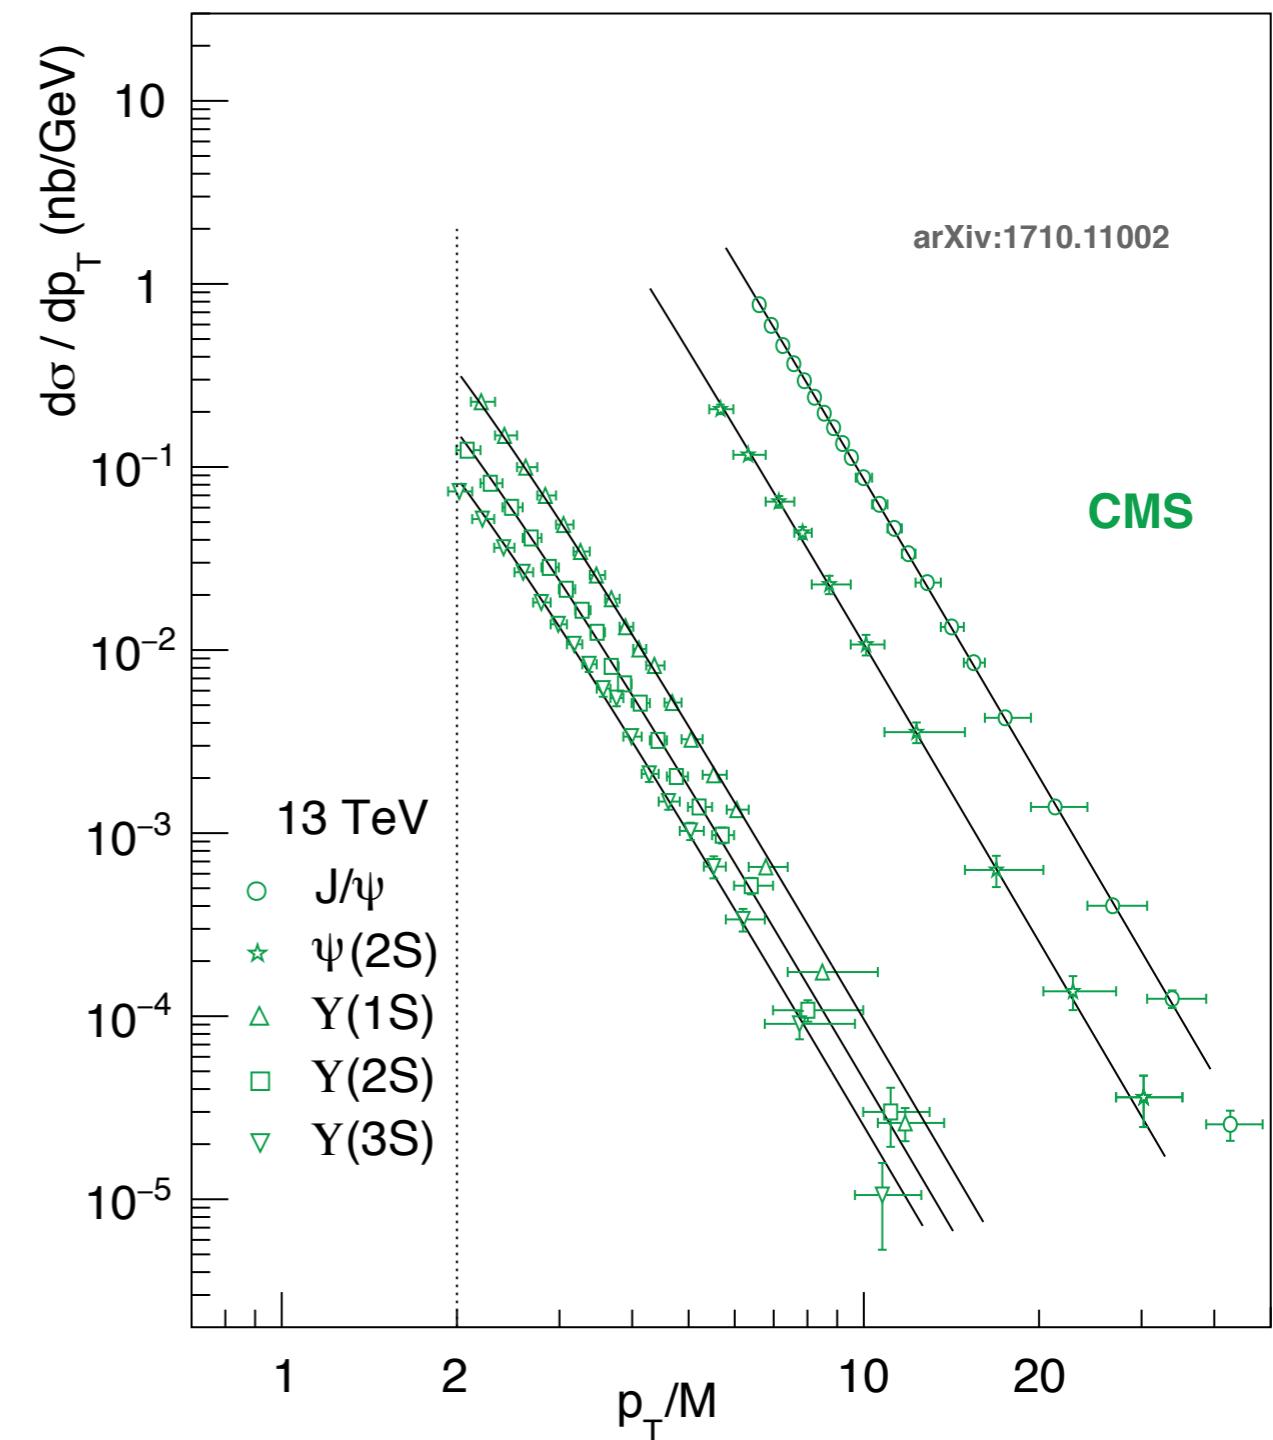

Mid-rapidity cross section measurements show a *common shape pattern* for $p_T/M \gtrsim 2$, independent of M and quantum numbers

$d\sigma/dp_T$ vs p_T/M

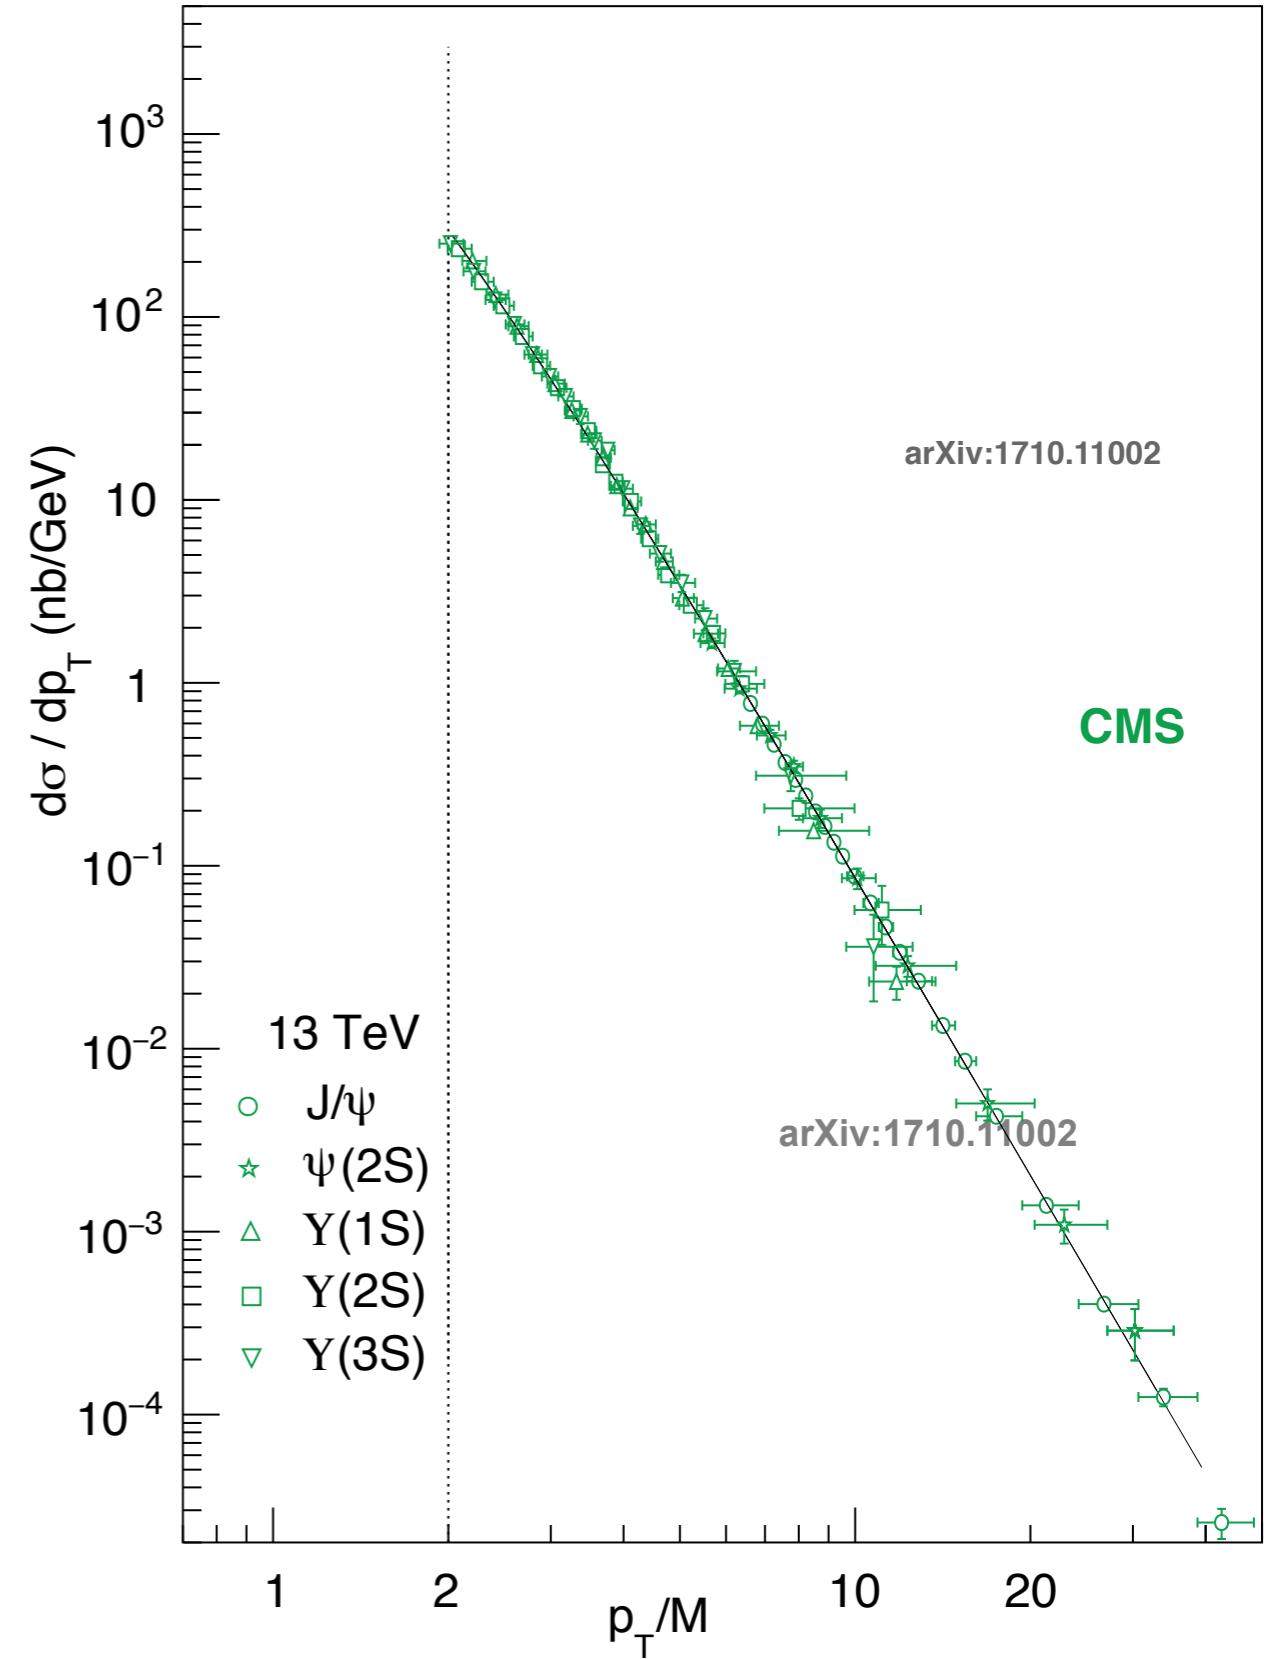

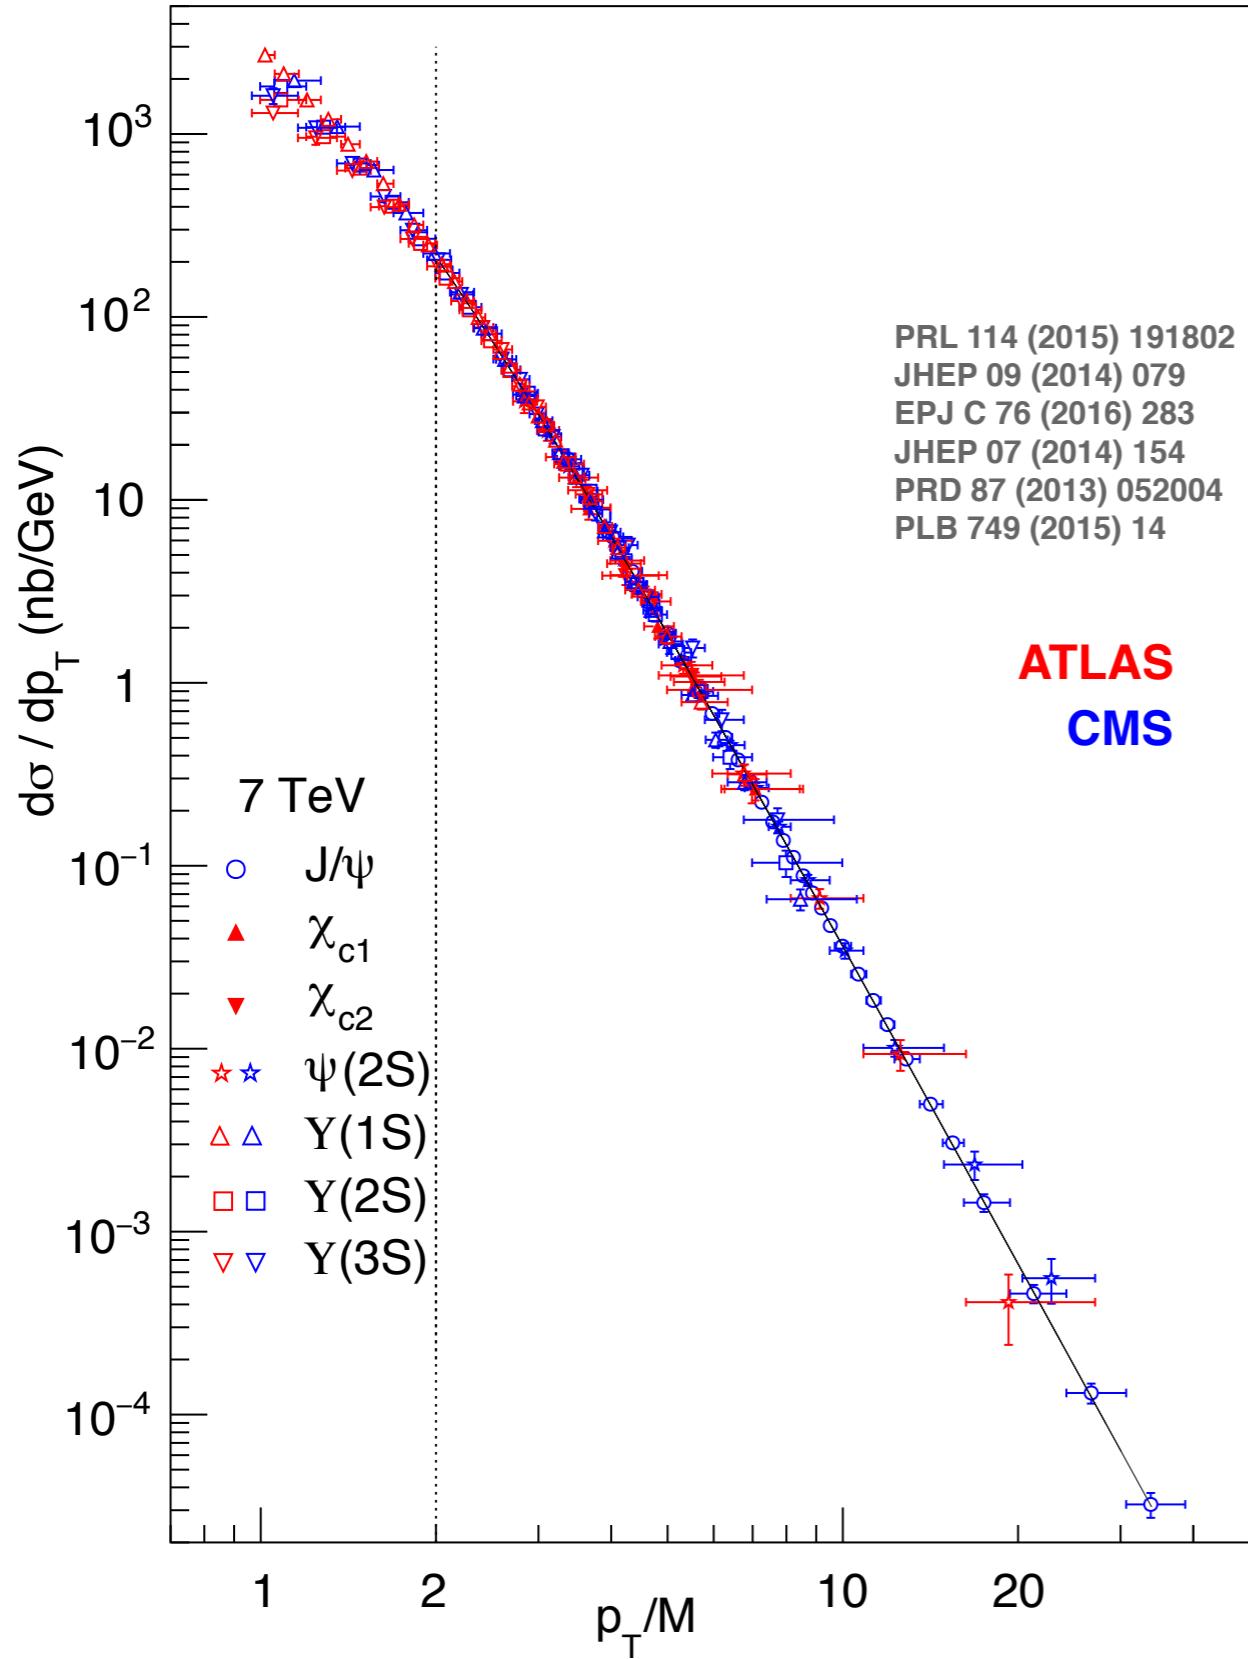

7 TeV

13 TeV

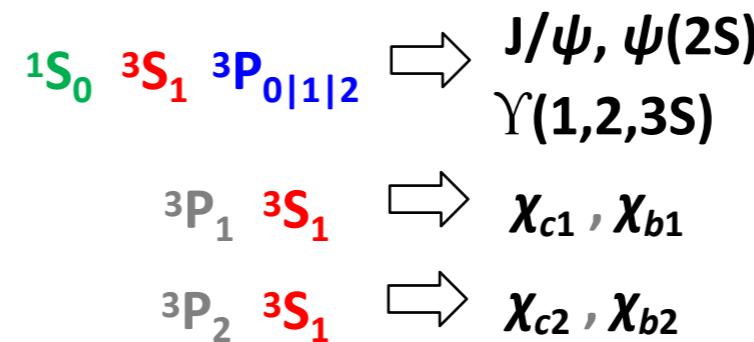

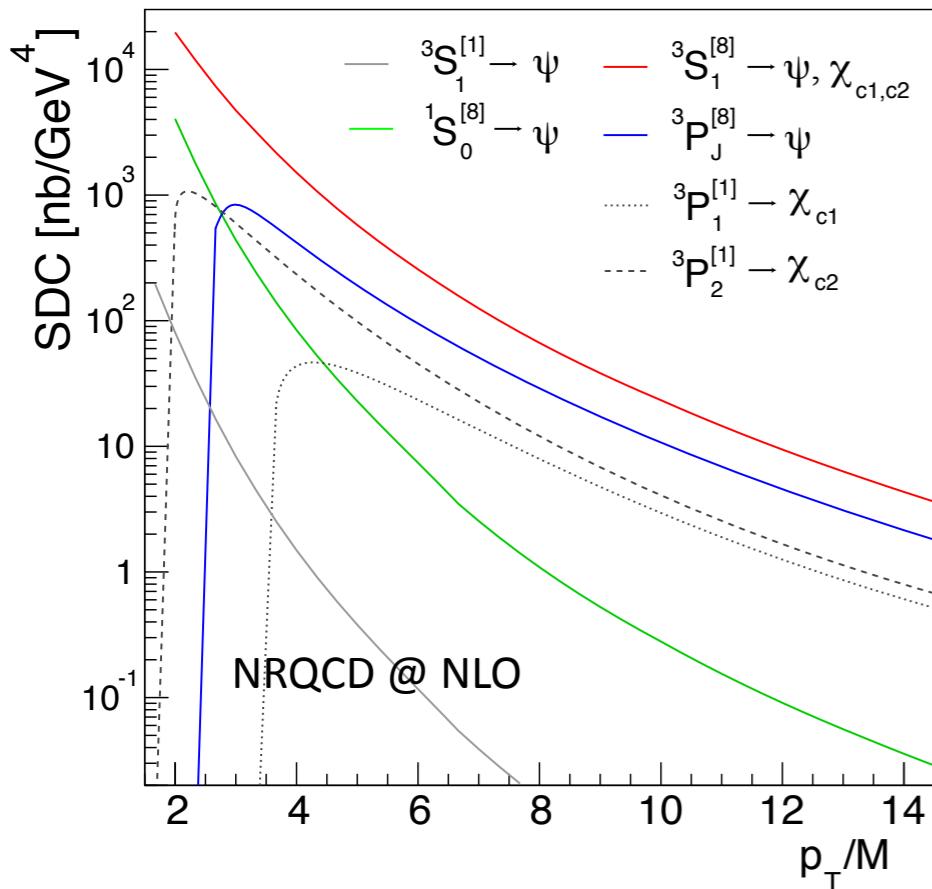

Unexpectedly simple data patterns

Scaling all data to match the J/ψ normalization

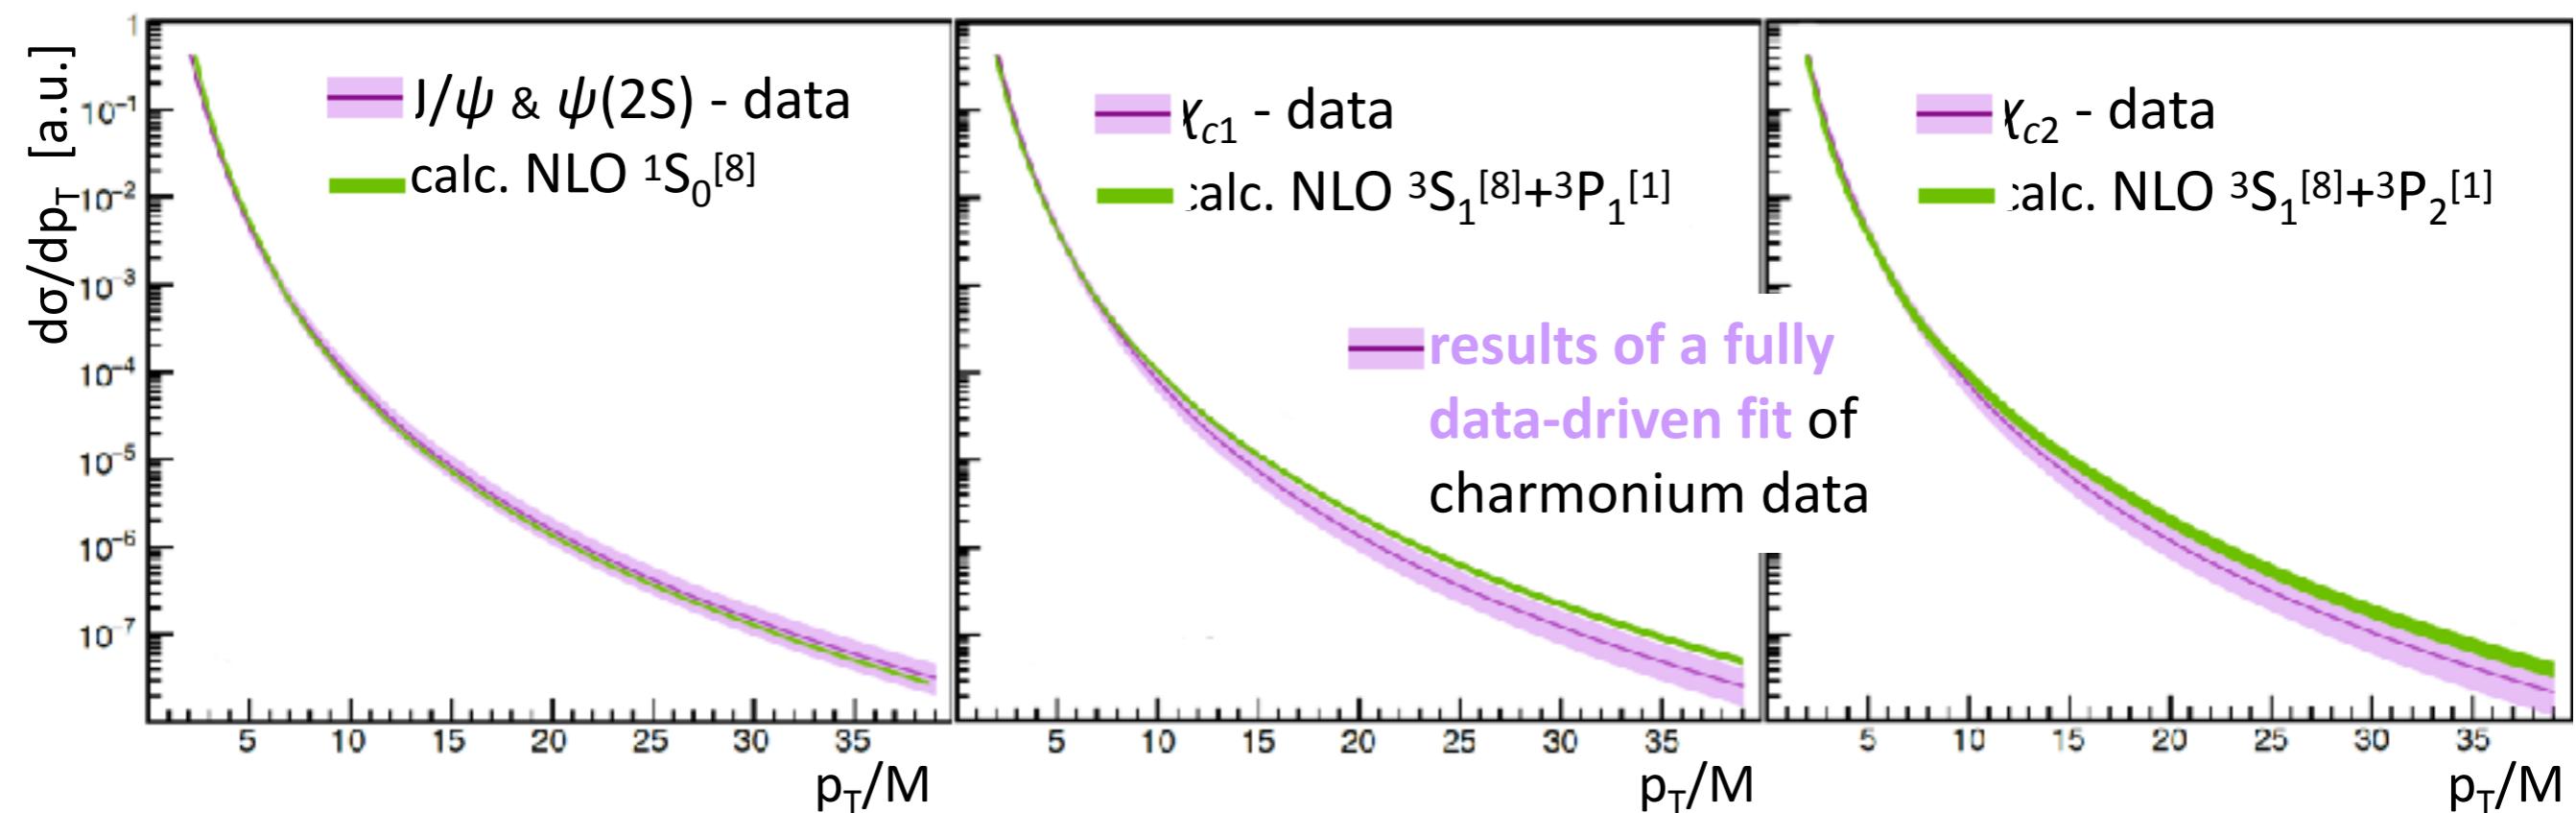

A “surprising” agreement with NRQCD

The variety of kinematic behaviours in NRQCD seems **redundant** with respect to the observed “universal” p_T/M scaling and lack of polarization

⇒ *cancellations* are needed to reproduce data....
...and they actually happen!

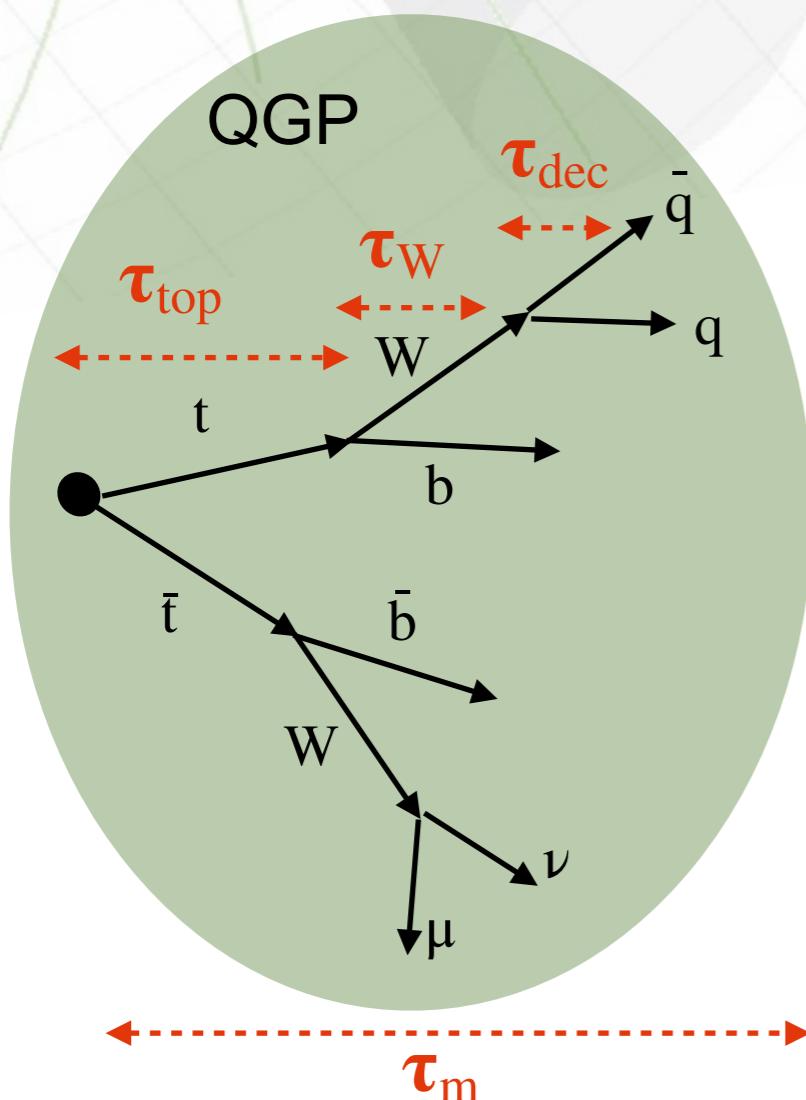

top quark as probe of QGP time structure

Apolinário, Milhano, Salam, Salgado :: arXiv:1711.03105 [hep-ph]

Tops in HIC

- ◆ Probing the QGP time structure with top quarks:
- ◆ Total time delay = top decay + W decay + decoherence time

$$\tau_{top} = 0.15 \text{ fm/c}$$

$$\tau_W = 0.10 \text{ fm/c}$$

$$\tau_d = \left(\frac{12}{\hat{q}\theta_{q\bar{q}}^2} \right)^{1/3}, \quad \hat{q} = \text{"medium density"}$$

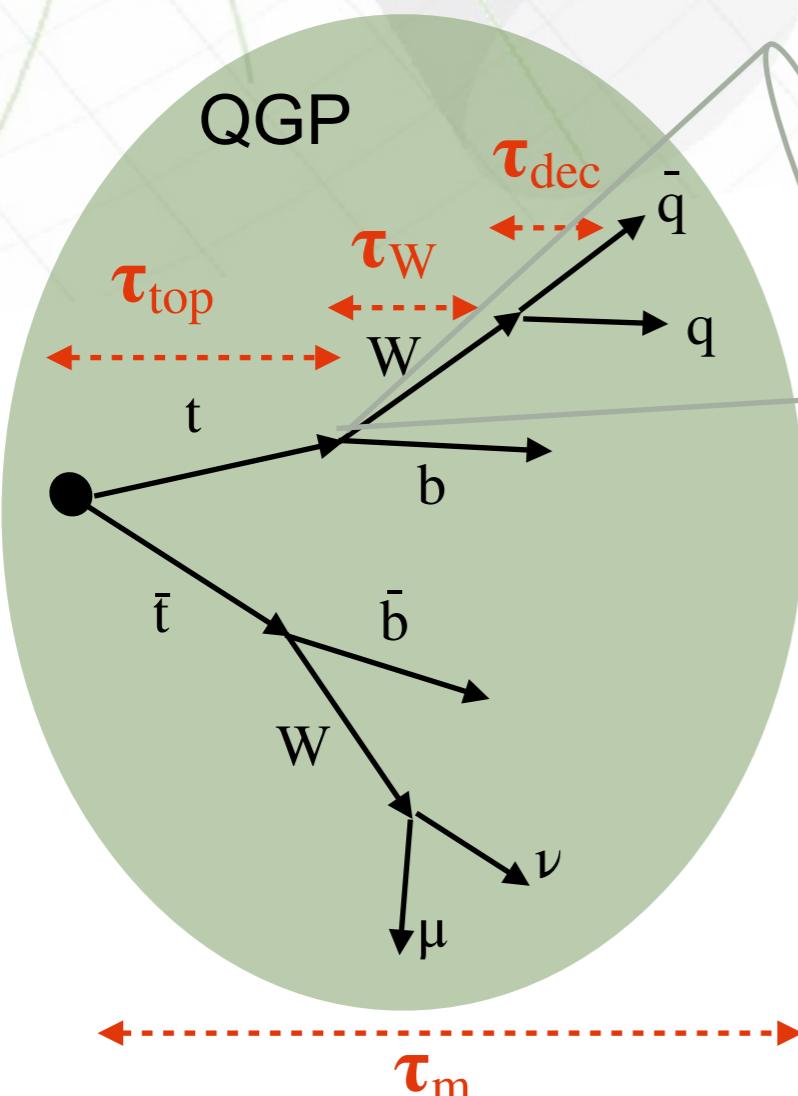

$$\tau_{tot} = \tau_{top} + \tau_W + \tau_{dec}$$

Jets from the W decay will only start los at *later* times:

$$\frac{\Delta E}{E} \Big|_{\substack{\text{W decay} \\ \text{products}}} = -\omega \left(\frac{\tau_m - \tau_{tot}}{\tau_m} \right) \quad 0 \leq \tau_{tot} \leq \tau_m$$

Tops in HIC

- ◆ Probing the QGP time structure with top quarks:
- ◆ Total time delay = top decay + W decay + decoherence time

$$\tau_{\text{top}} = 0.15 \text{ fm/c}$$

$$\tau_W = 0.10 \text{ fm/c}$$

$$\tau_d = \left(\frac{12}{\hat{q} \theta_{q\bar{q}}^2} \right)^{1/3}, \quad \hat{q} = \text{"medium density"}$$

$$\tau_{\text{tot}} = \tau_{\text{top}} + \tau_W + \tau_{\text{dec}}$$

Jets from the W decay will undergo jet energy loss at *later times*:

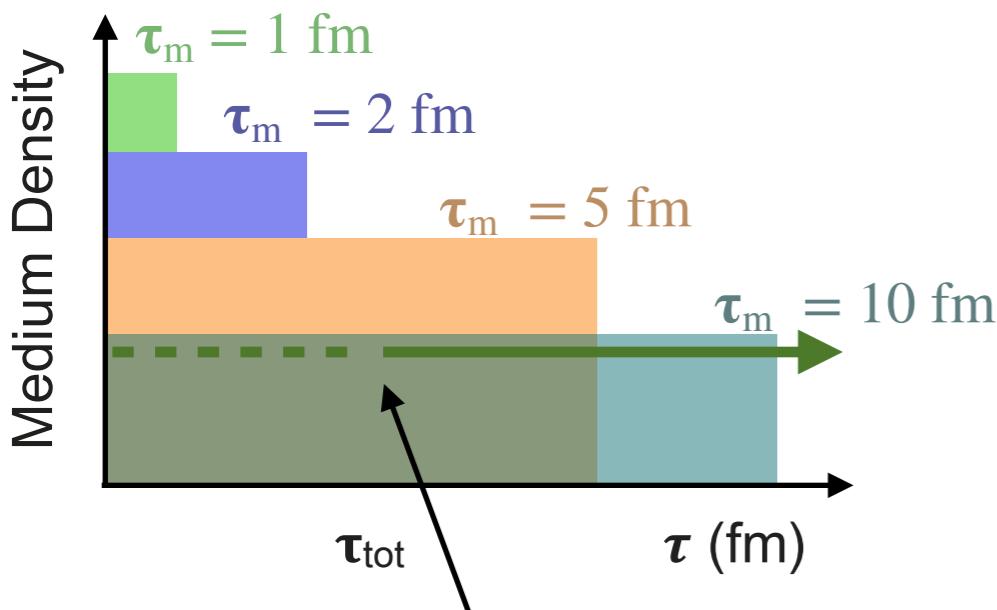

$$\frac{\Delta E}{E} \Big|_{\substack{\text{W decay} \\ \text{products}}} = -\omega \left(\frac{\tau_m - \tau_{\text{tot}}}{\tau_m} \right) \quad 0 \leq \tau_{\text{tot}} \leq \tau_m$$

Jet energy loss \Rightarrow change in W mass

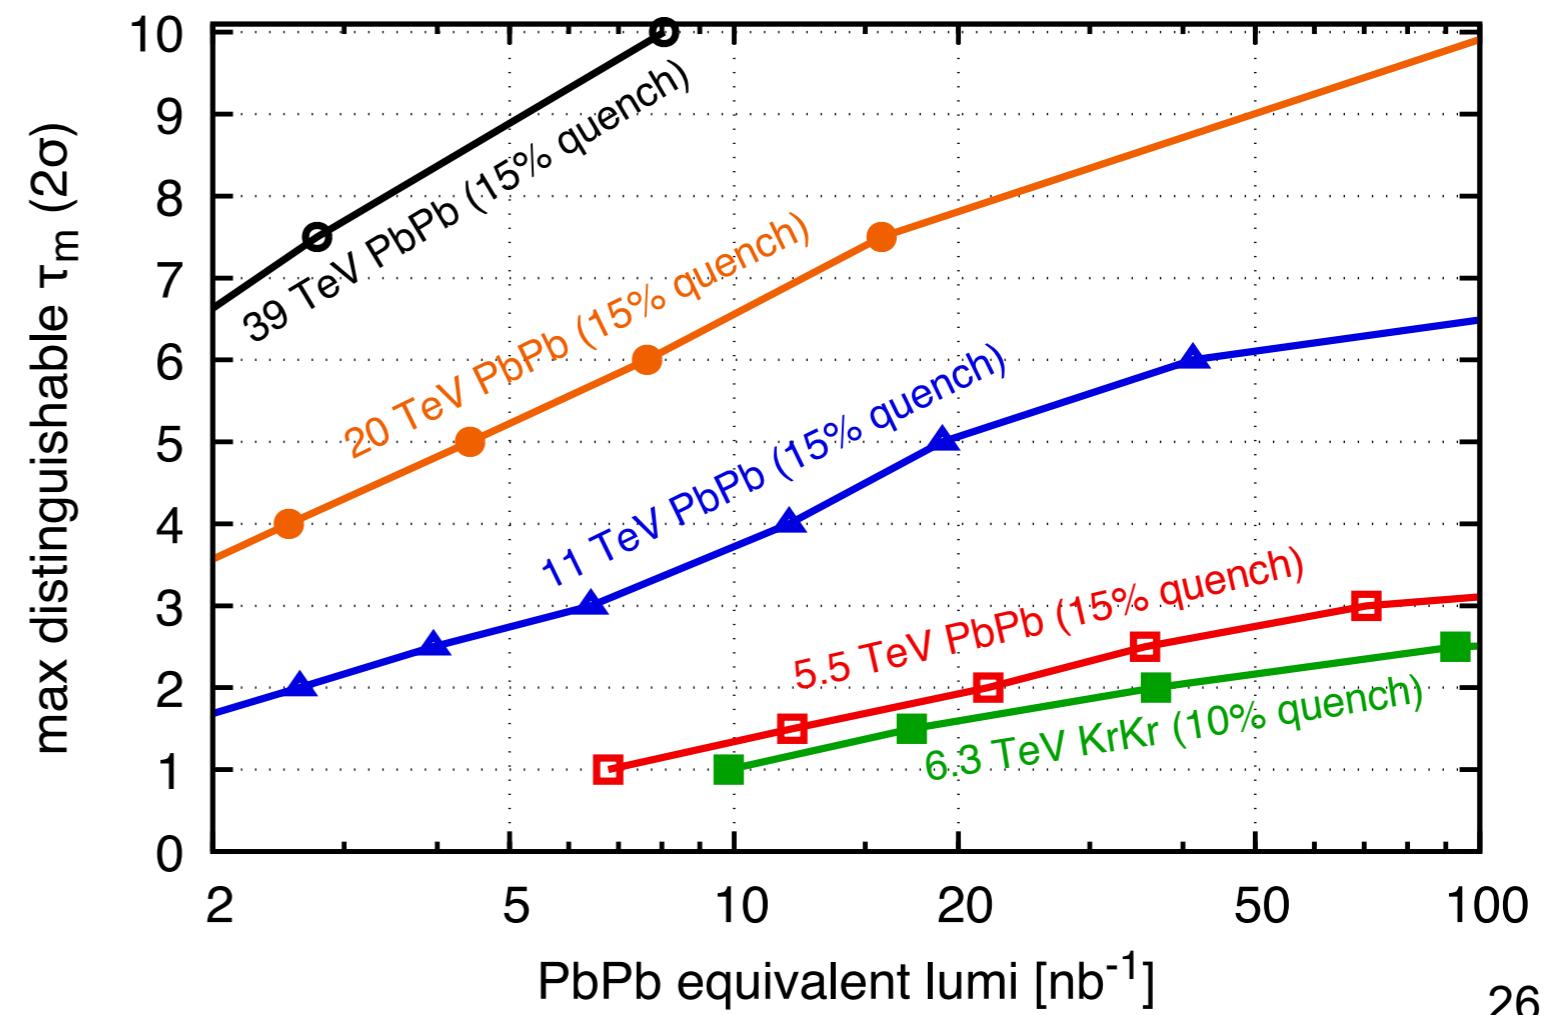

W mass can be used as an observable to probe different timescales of the QGP

Tops in HIC

- ◆ Probing the QGP time structure with top quarks:
- ◆ Total time delay = top decay + W decay + decoherence time
- ◆ Maximum time, τ_m that can be distinguished with 2σ for a given $\mathcal{L}_{\text{equiv}}^{\text{PbPb}}$:

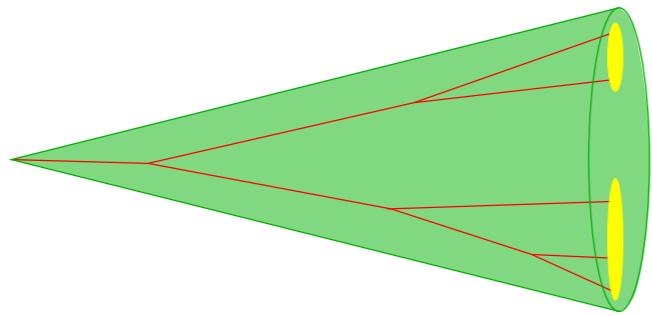

Time that it starts to interact with the medium

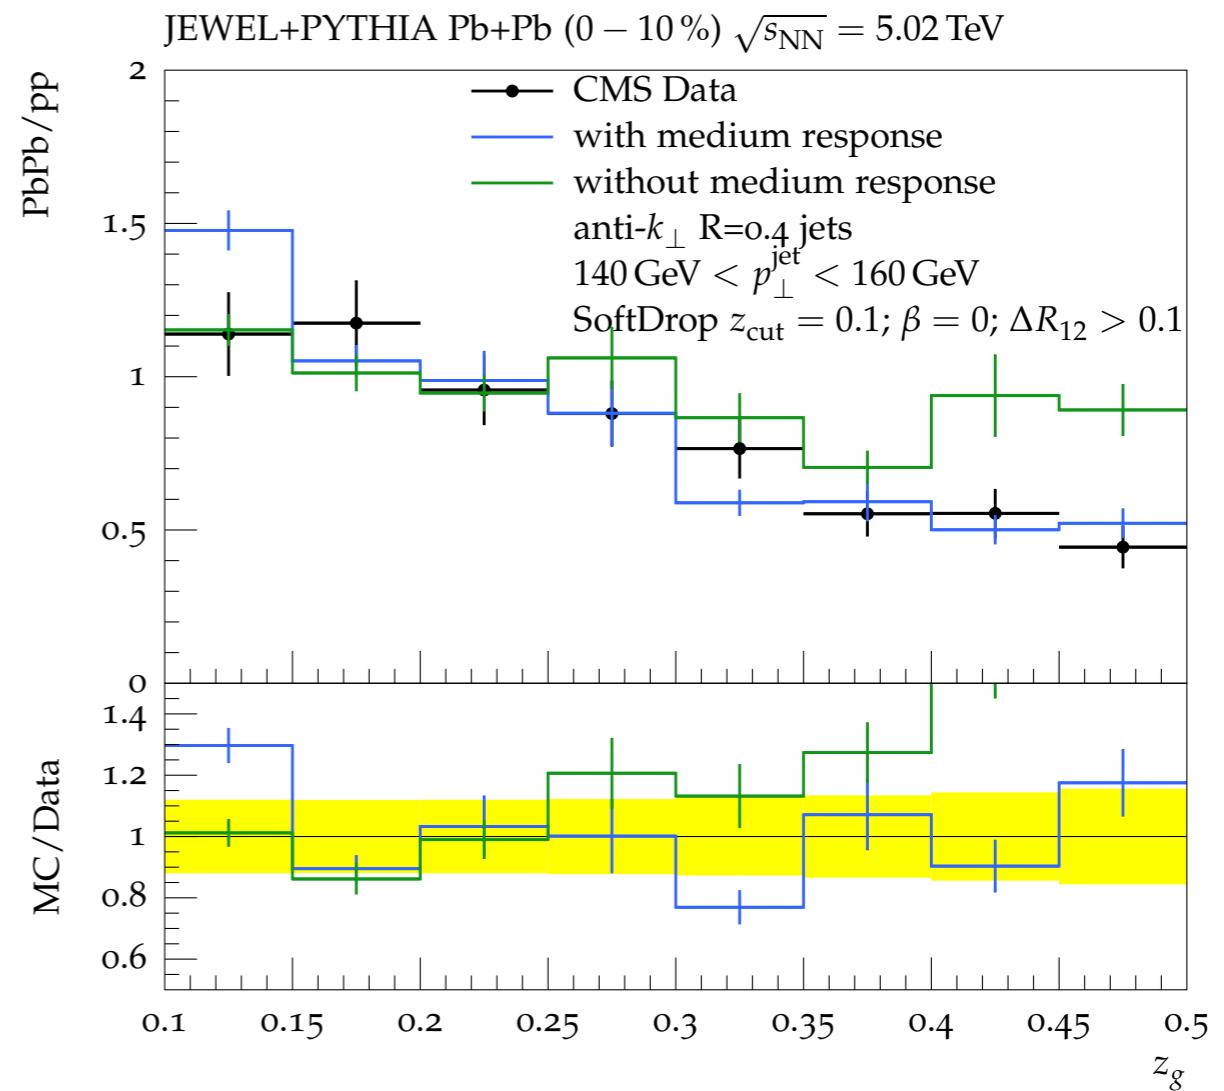

jet substructure and QGP response

Kunnawalkam Elayavalli, Zapp :: JHEP 1707 (2017) 141
Apolinário, Milhano, Ploskon, Zhang :: arXiv:1710.07607 [hep-ph]
Milhano, Wiedemann, Zapp :: Phys.Lett. B (in press)

SUB-JET MOMENTUM SHARING

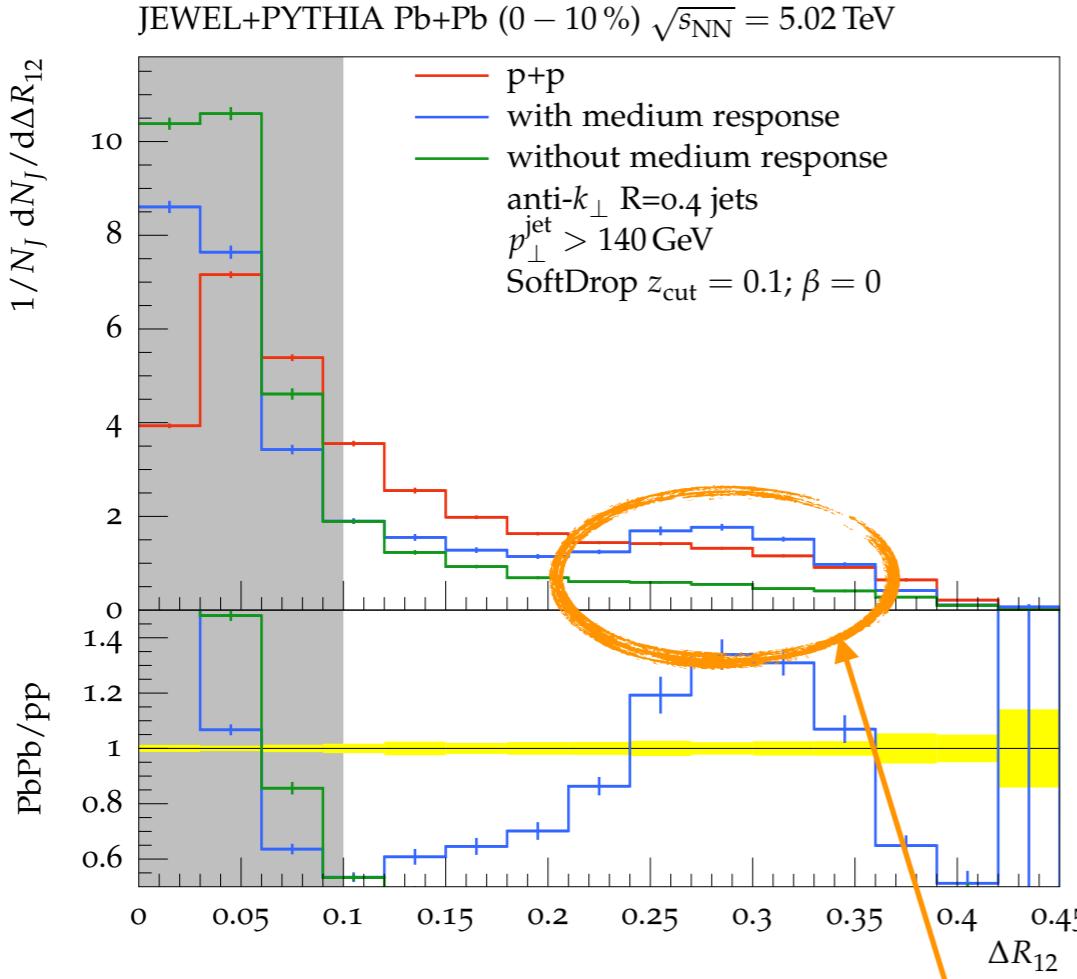

$$z_g = \frac{\min(p_{\perp,1}, p_{\perp,2})}{p_{\perp,1} + p_{\perp,2}} \quad z_g > z_{\text{cut}}$$

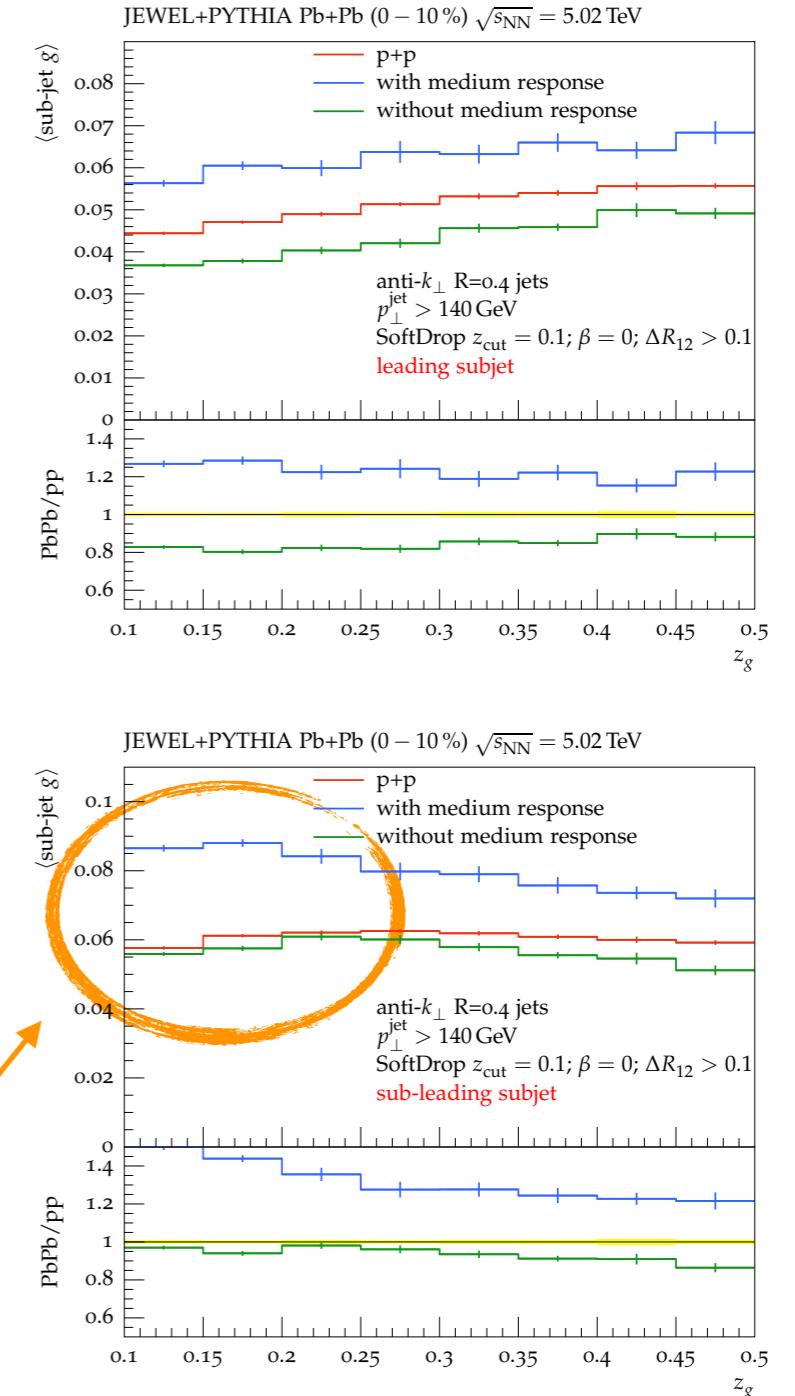

- small modification of z_g distribution from ‘additional splittings’ and ‘energy loss’
- medium response essential to reproduce data

MEASURABLE TELL-TALES OF QGP RESPONSE

- additional component at large angular separation
- z_g dependent modification of sub-leading jet girth

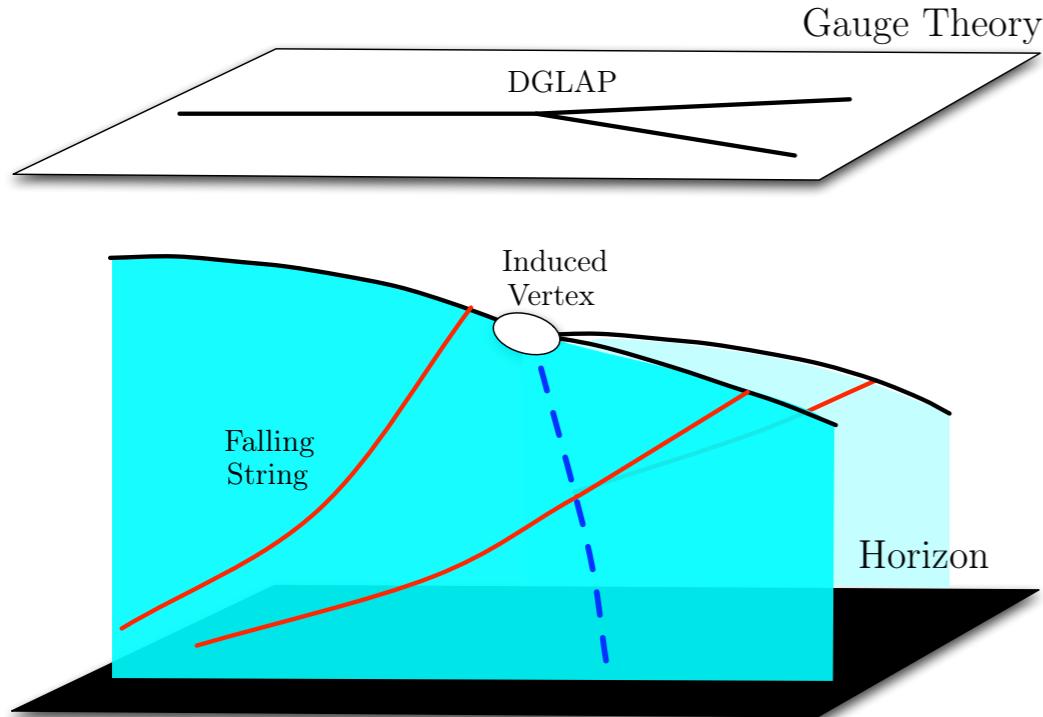

$$g = \sum_i \frac{p_{\perp,i} \Delta R_{ij}}{p_{\perp}^J}$$

hybrid approach to jet quenching

Can Gulan, Casalderrey, Milhano, Pablos, Rajagopal :: JHEP 1603 (2016) 053
:: JHEP 1703 (2017) 135

HYBRID STRONG/WEAK COUPLING MODEL

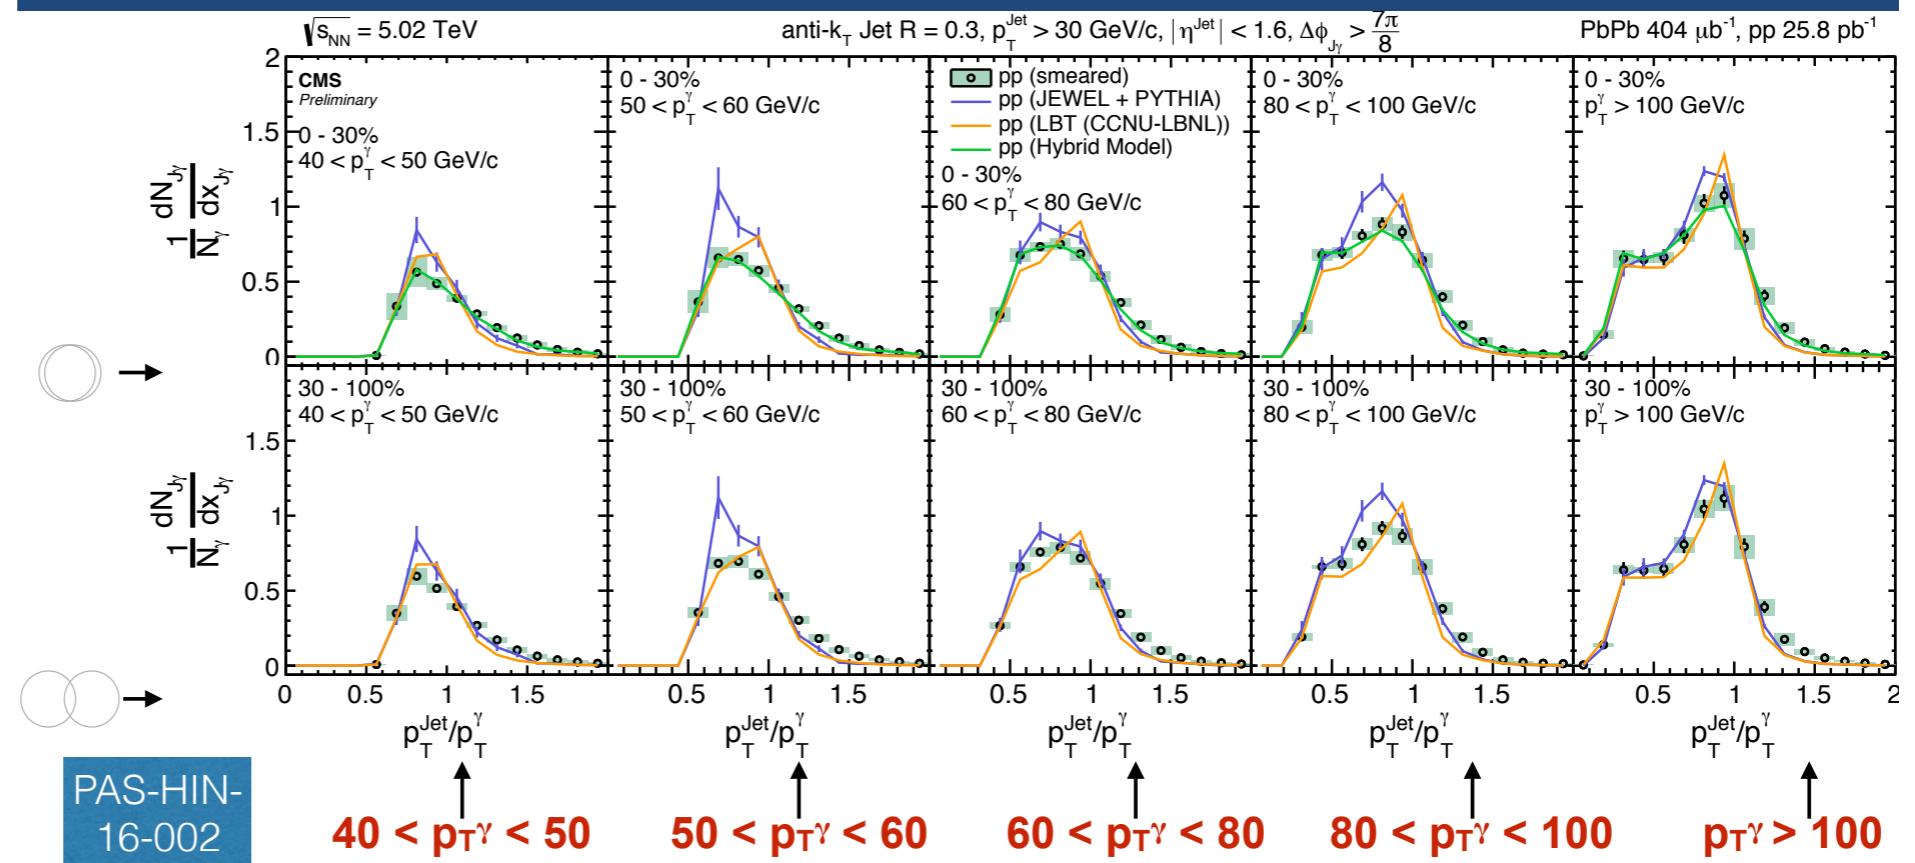

- physics at different scales merit different treatments
- vacuum jets where each parton loses energy non-perturbatively [as given by a holographic AdS-CFT calculation]
- lost energy becomes a wake [QGP response], part of which will belong to the jet

$$\left. \frac{dE}{dx} \right|_{\text{strongly coupled}} = -\frac{4}{\pi} E_{\text{in}} \frac{x^2}{x_{\text{stop}}^2} \frac{1}{\sqrt{x_{\text{stop}}^2 - x^2}}, \quad x_{\text{stop}} = \frac{1}{2\kappa_{\text{sc}}} \frac{E_{\text{in}}^{1/3}}{T^{4/3}}$$

single free parameter
[accounts for QCD/N=4 SYM differences]

SUCCESSFUL IMPLEMENTATION OF NonPert Jet Eloss

Theory Comparison: Distribution of $x_{J\gamma}$ vs. γp_T

- Overlaid PYTHIA, JEWEL, LBT and Hybrid Model

Christopher McGinn

34

✓ overall excellent agreement with data and strong predictive power

FUTURE PLANS

FOR THE NEXT TWO YEARS AND BEYOND

- ✓ strengthen efforts on existing activities
- ✓ identify synergies within the group for potentially high-impact projects
- ✓ identify further complementarity with LIP's experimental groups for in-house thematic task forces
- ✓ seek to expand, benefiting from available external funding, the scope of the group :: the aim is to match the breadth of LIP's experimental endeavours and have the ability to play a leading role in the definition of future projects
- ✓ seek points of contact with other researchers/groups in Portugal for collaboration
- ✓ **strengthen existing international collaborations** and foster new ones
