Experience Notes

As System Manager:

- Many users working in the same areas **do not interact** to each other.
- Supercomputer centers already provide **reliable services**.

As Researcher:

- Scientific work expectations and ratings encourage **discarding ideas** that could become valuable.
- New researchers can not compete in **equality** against more experienced scientists.
- Scientific knowledge rely **completely** on the editorial bussines to be disseminated.

Proposals

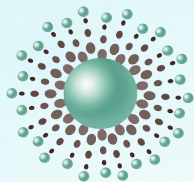

-Take advantage of the use of the resources of the supercomputing centers converting them in **places to meet and collaborate** with other users with similar interests.

-An **open platform** where upload possible ideas for new works as abstracts, receiving feedback, support and even collaboration from senior researchers.

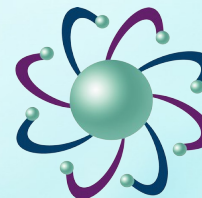

-Free access to research content develop in each center or federation.
