

LATTES: simulation and software distribution

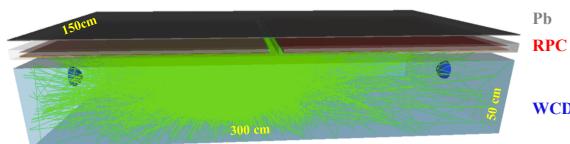

Bernardo Tomé, Ruben Conceição

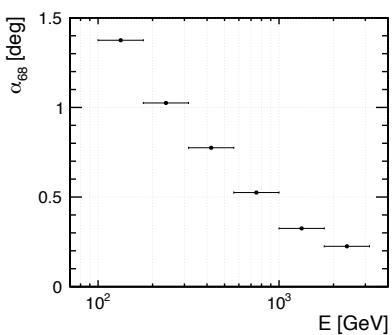

Simulating LATTEs performance

Shower simulation
(CORSIKA)

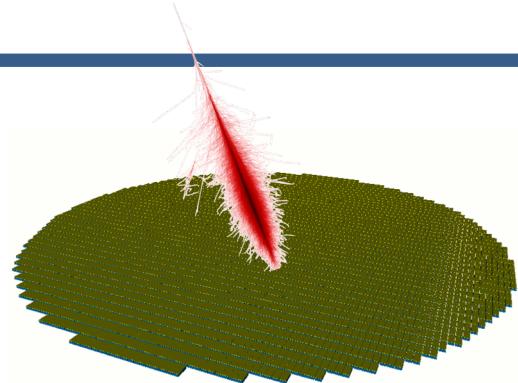

Detector simulation
(LATTEsim)

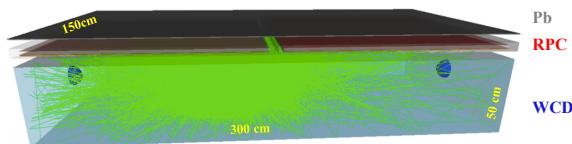

Shower reconstruction
(LATTErec)

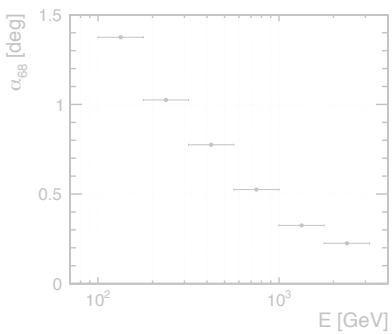

Simulating LATTEs performance

Shower simulation
(CORSIKA)

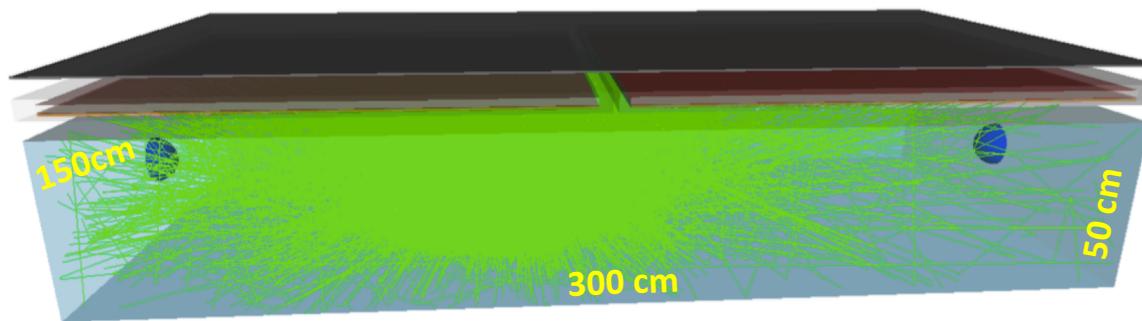

Detector simulation
(Geant4)

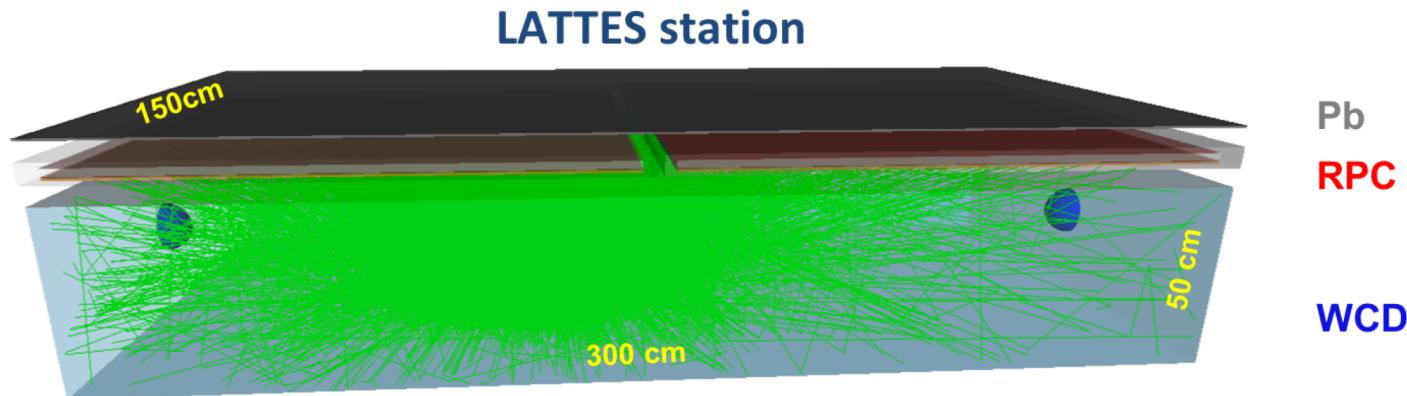

Shower reconstruction
(Ruben's talk)

LATTES hybrid detector concept

RPCs : time and spatial resolution
WCDs: e.m. energy, g/h discrimination
and trigger

LATTES hybrid concept baseline design

Thin lead plate (**Pb**)

- 5.6 mm (one radiation length)

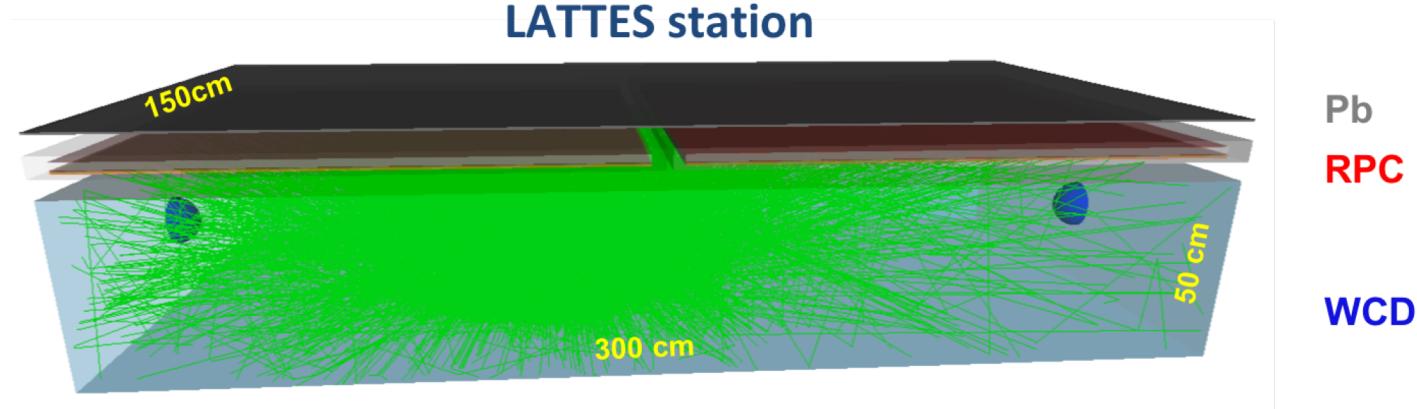

Resistive Plate Chambers (**RPC**)

- 2 RPCs per station
- Each RPC with 4x4 readout pads

Water Cherenkov Detector (**WCD**)

- 2 PMTs; 15 cm diameter
- inner walls covered with white diffusing Tyvek

LATTES hybrid concept

Thin lead plate (**Pb**)

- Convert the shower photons;
- Improve angular reconstruction

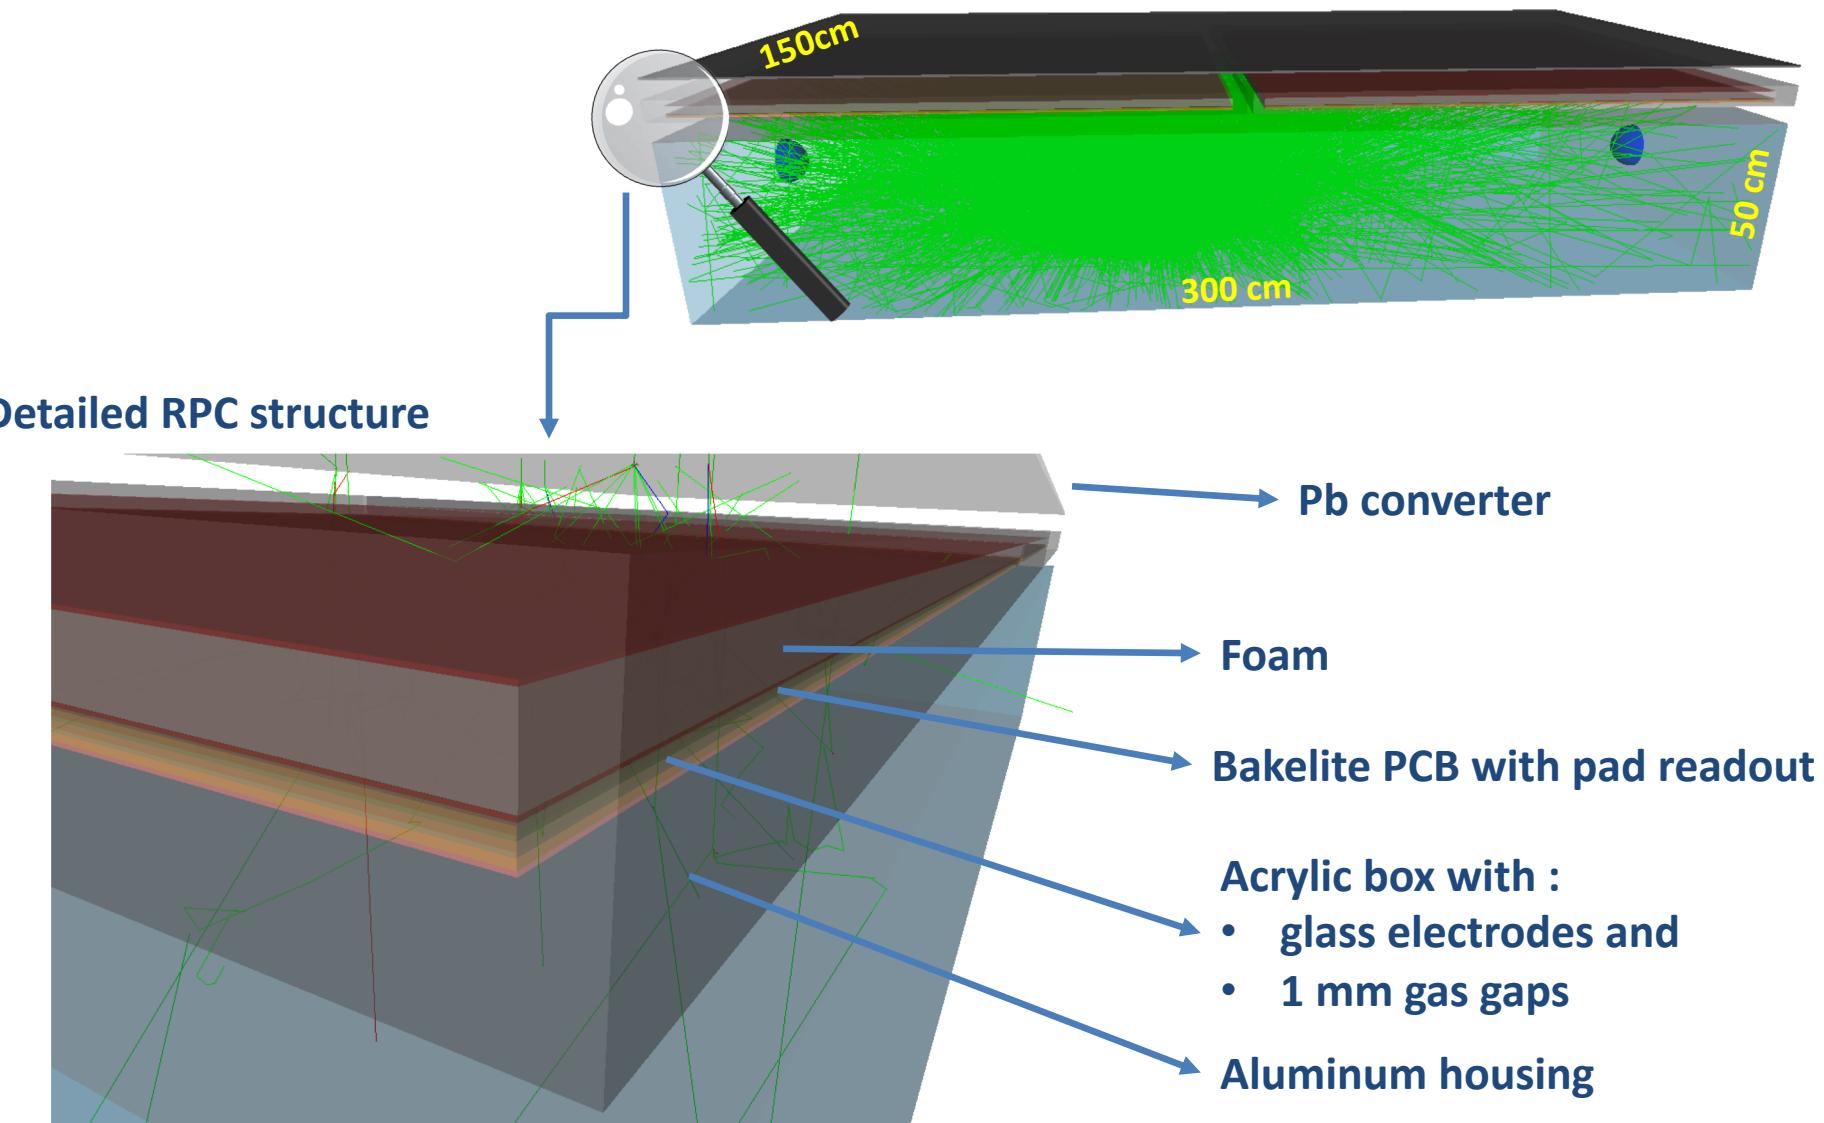

Resistive Plate Chambers (**RPC**)

- Sensitive to charged particles
- Very good time (1 ns) and spatial resolution (tens of cm)
- Improve geometric reconstruction
- Explore shower particle patterns at ground

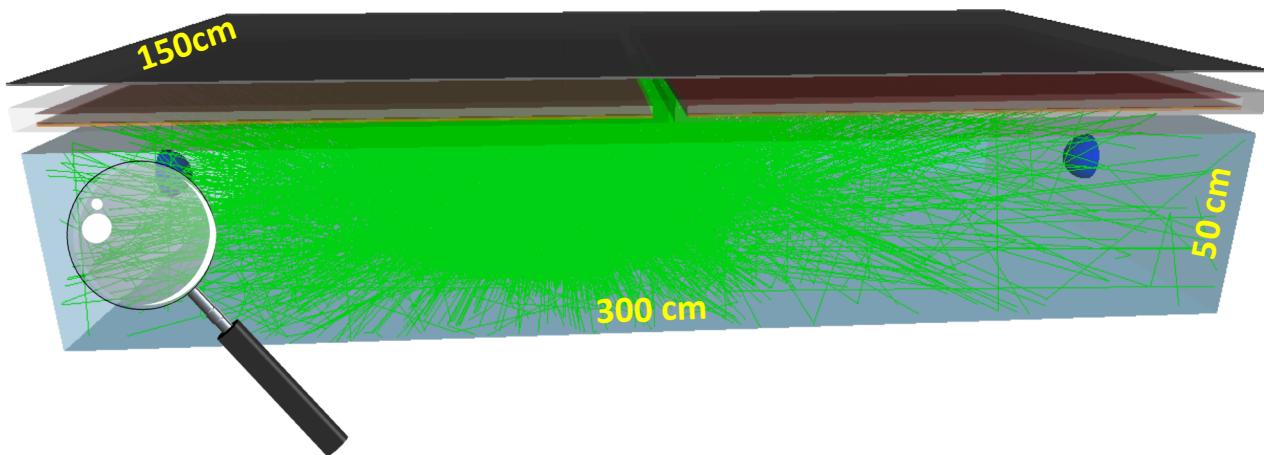

Water Cherenkov Detector (**WCD**)

- Sensitive to shower photons and charged particles
- Measure energy flow at ground
- Improve trigger capability
- Improve gamma/hadron discrimination

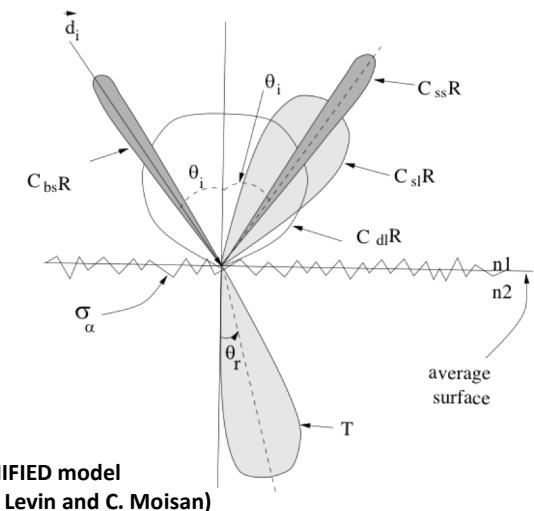

LATTES station in Geant4

LATTES station in Geant4

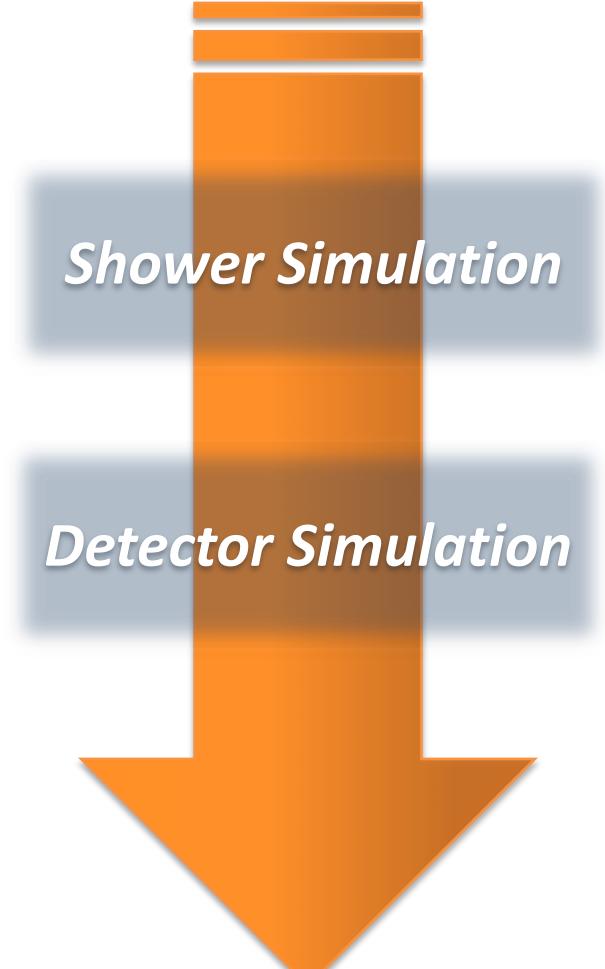

- Explore **Geant4 capabilities** to simulate **optical photon propagation**;
- λ dependence of all relevant processes and materials
- **Water**
 - Attenuation length ~ 80 m @ $\lambda = 400$ nm
- **PMT**
 - 15 cm diameter
 - Q.E._{max} $\sim 30\%$ @ $\lambda = 420$ nm
- **Tyvek**
 - Described using the **G4 UNIFIED** optical model;
 - Specular and diffusive properties;
 - R $\sim 95\%$, for $\lambda > 450$ nm

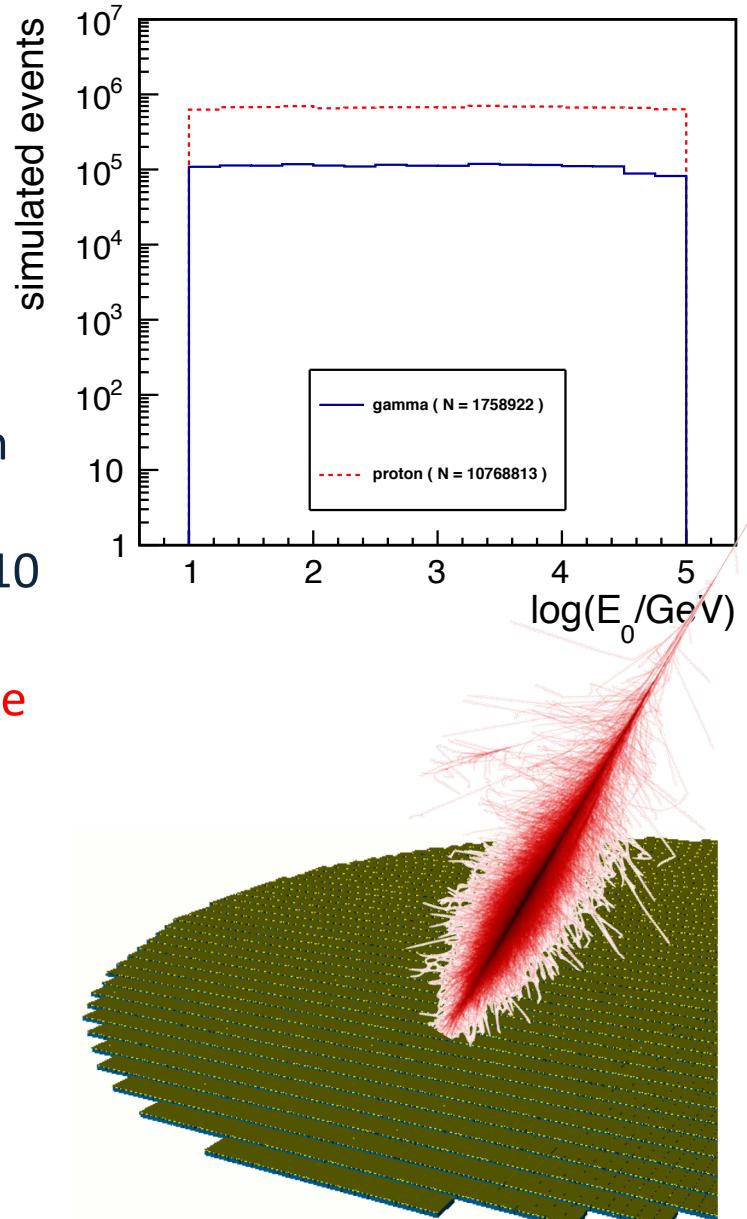

UNIFIED model
(A. Levin and C. Moisan)

- Detector simulation output
 - **ROOT tree structure :**
 - Shower simulation parameters;
 - Detector configuration parameters;
 - Info at particle level;
 - PMT signal vs time;
 - RPC hits (position,time,...) for each pad.

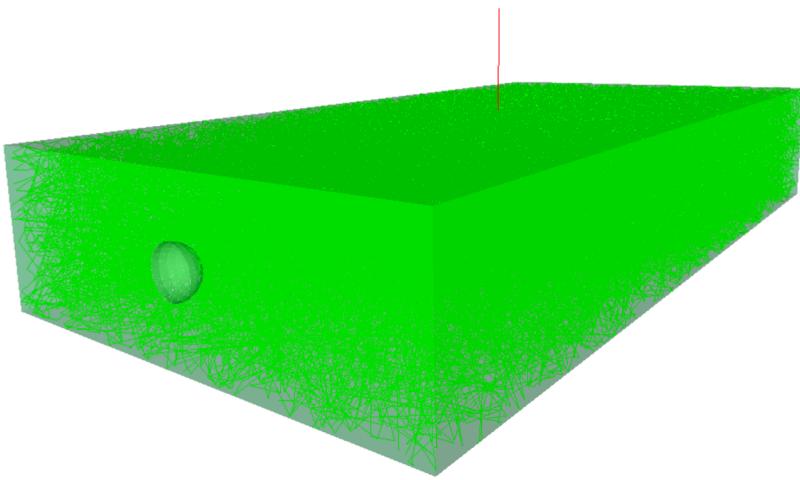

Simulation production

- End-to-end realistic simulation
 - Extensive Air Showers: **CORSIKA**
 - v7.6400 with Fluka2011.2c;
 - More than **50 000 gamma/proton** showers simulated randomly between 10 GeV – 300 TeV;
 - Gammas have a fixed zenith angle of 10 degrees;
 - Observation level at **5200 m of altitude**
 - Detector simulation: **Geant4**
 - Version 10.1.3;
 - Core array 20 000 m²;
 - Each shower is resampled 100 times over a large area containing all the array.

LATTES fast simulation

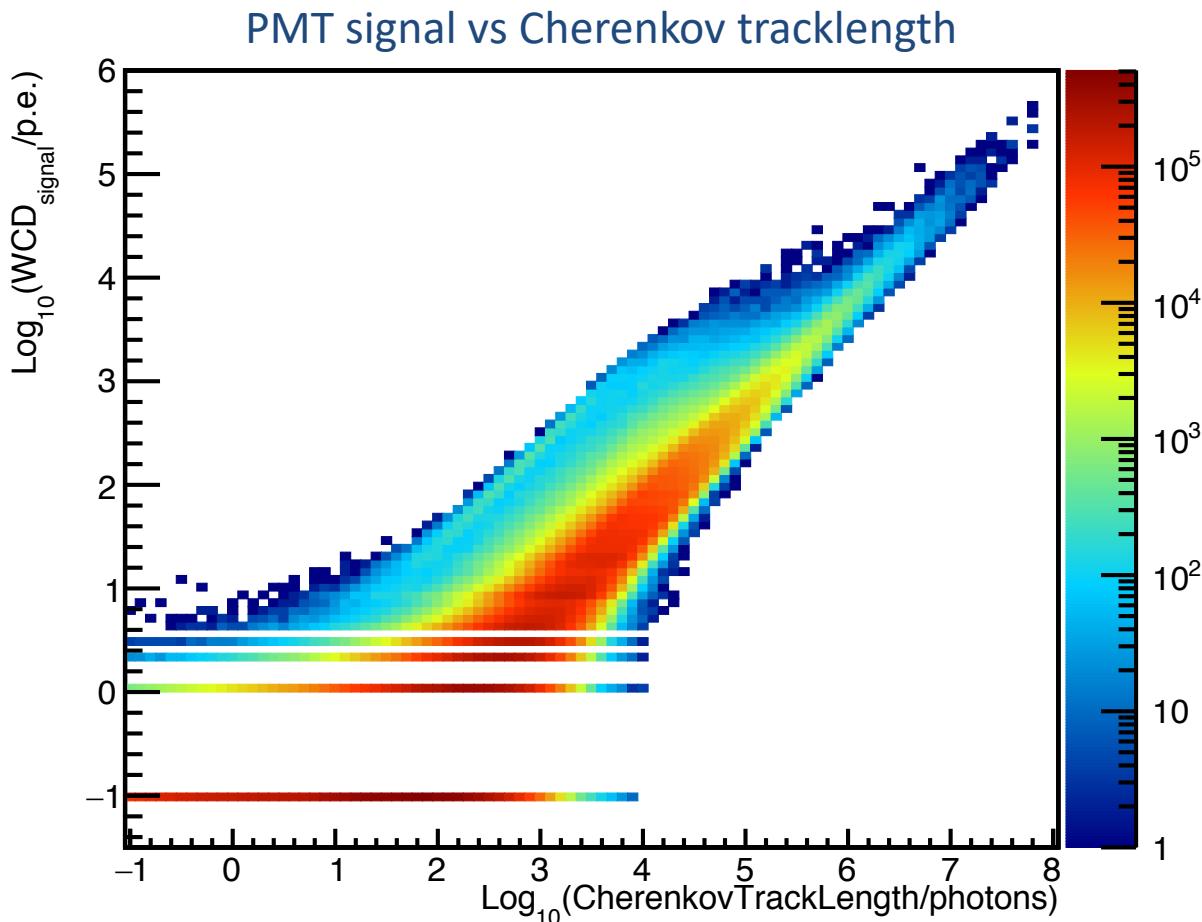

$$dN / (dEdL) = 370 * z^2 * \sin^2(\theta_c) \text{ cm}^{-1} \text{ eV}^{-1}$$

- Full simulation requires the tracking of a large number of Cherenkov photons;
- Large simulation sets for performance and optimization studies;
- Simulation of the sparse array...

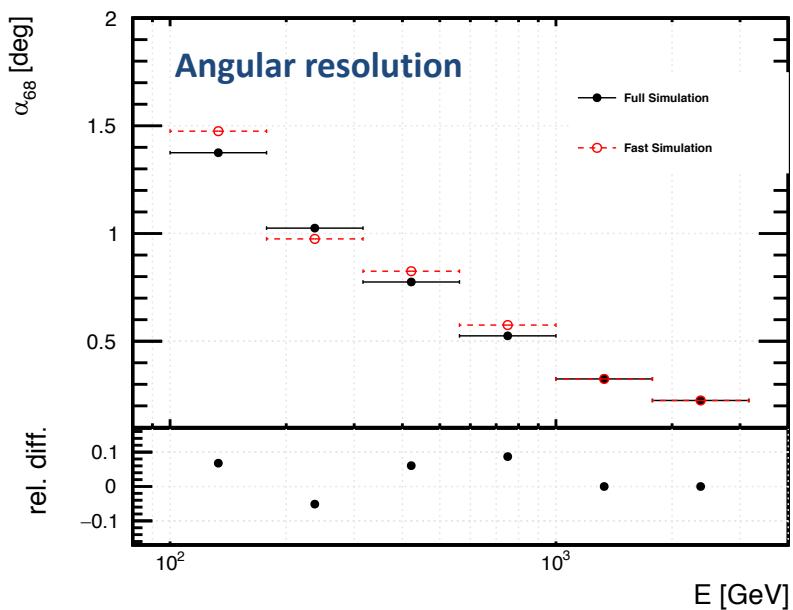

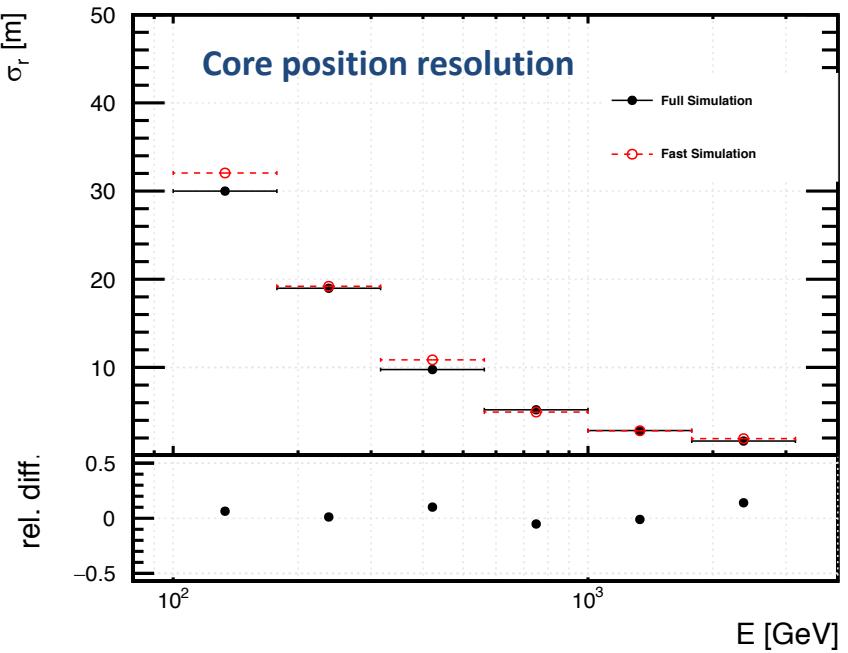

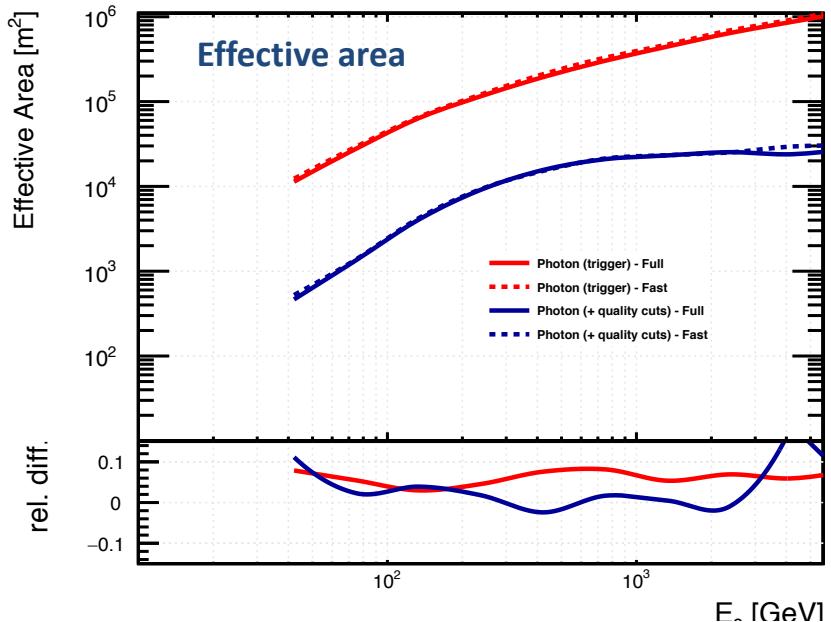

N ~ 8500 Cherenkov photons for a single vertical particle crossing the WCD;
> 10⁶ Cherenkov photons may have to be tracked in a single station

LATTES fast simulation

- Parametrize the PMT signal in function of the total emitted Cherenkov light;
- For the RPC's use full simulation.

Fastsim validation

- Agreement with full simulation at the level of 10%;
- Further improvements ongoing;

Shower reconstruction

- Detector simulation output
 - Format is a ROOT tree
 - Methods to access specific simulated shower parameters
 - WCD signal
 - RPC hits
 - Detector configuration and parameters
 - Shower simulation parameters
- Reconstruction tool
 - Several modules to reconstruct the shower
 - Geometry
 - Energy
 - Gamma/hadron discrimination
- Lightweight and easy to re-process for higher level analysis

LATTES software

- LATTES software has been tested and is currently running at:
 - Our laptops ;-) [MACOS]
 - Lisbon cluster [SL6]
 - Prague cluster [SL6]
 - Rio de Janeiro interactive machines (CBPF) [Ubuntu16]
- The codes are relatively modular and documentation can be obtained via Doxygen
 - Just run: *doxygen Doxyfile*

LATTES documentation

A screenshot of a web browser window displaying the LATTESim documentation. The title bar shows the URL "file:///Users/ruben/Desktop/LattesSim/doxygen/html/index.html". The main content area displays the header "LATTESim v1" and a navigation menu with links for "Main Page", "Namespaces", "Classes", and "Files". A search bar is also present. The page content includes a section titled "LATTESim Documentation".

Generated by [doxygen](#) 1.8.13

A screenshot of a web browser window displaying the LATTEsrec documentation. The title bar shows the URL "file:///Users/ruben/Desktop/LATTEsrec/doxygen/html/index.html". The main content area displays the header "LATTEsrec v1" and a navigation menu with links for "Main Page", "Classes", and "Files". A search bar is also present. The page content includes a section titled "LATTEsrec Documentation".

LATTES documentation

LATTErec v1

The screenshot shows a web browser window displaying the LATTErec v1 documentation for the FisherCoef class. The URL in the address bar is file:///Users/ruben/Desktop/LATTErec/doxygen/html/classFisherCoef.html#aa2bcb3c7c051. The page contains four code snippets, each with a line number and a code editor view:

- GetFisherVarNames()**

```
std::vector<string> FisherCoef::GetFisherVarNames ( ) const
```

Definition at line 24 of file [FisherCoef.h](#).

```
24 | {return fVarNames;}
```
- HasFisher()**

```
const bool FisherCoef::HasFisher ( ) const
```

Definition at line 27 of file [FisherCoef.h](#).

```
27 | {return fHasFisher;}
```
- PrintFisherCoefficients()**

```
void FisherCoef::PrintFisherCoefficients ( ) const
```

Definition at line 32 of file [FisherCoefs.cc](#).

References [fVarNames](#), and [fWeights](#).

Referenced by [PerformShowerRec\(\)](#).

```
33 | {  
34 |     for (unsigned int i = 0; i < fVarNames.size(); ++i)  
35 |         cout << "i: " << i << " --> " << fVarNames[i].c_str() <<  
36 |             " = " << fWeights[i] << endl;  
37 | }
```
- SetEnergy()**

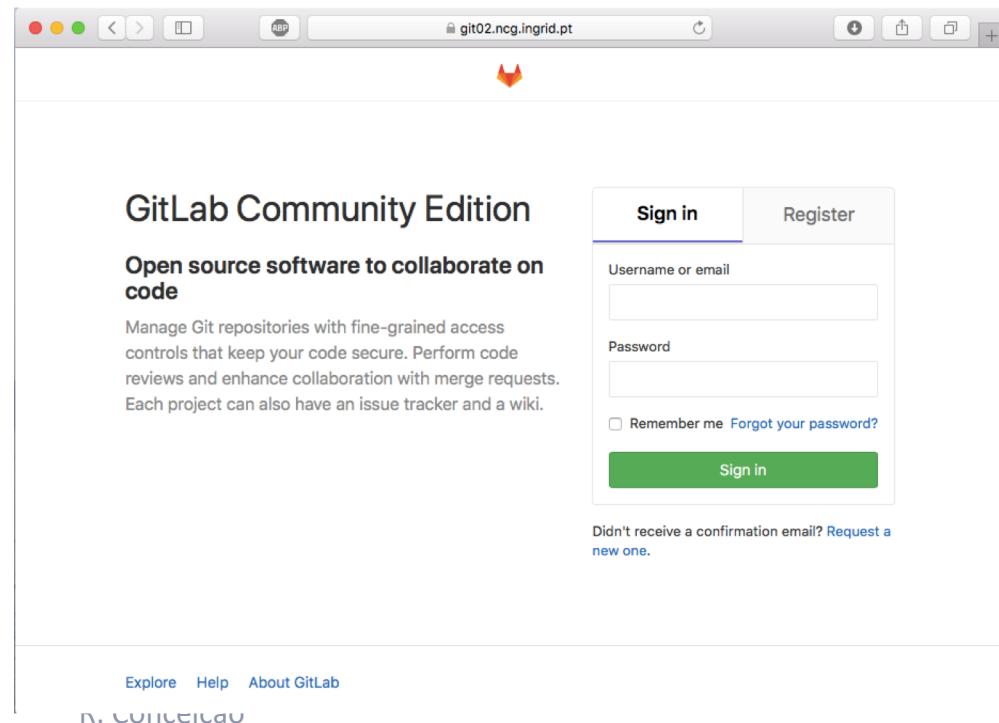

```
void FisherCoef::SetEnergy ( double energy )
```

Definition at line 28 of file [FisherCoef.h](#).

```
28 | {fEnergy = energy;}
```

LATTES SW distribution

- If you want to install LATTES SW register at:
 - git02.ncg.ingrid.pt
 - Then send us (bernardo@lip.pt, ruben@lip.pt) your username so that we can give you permissions

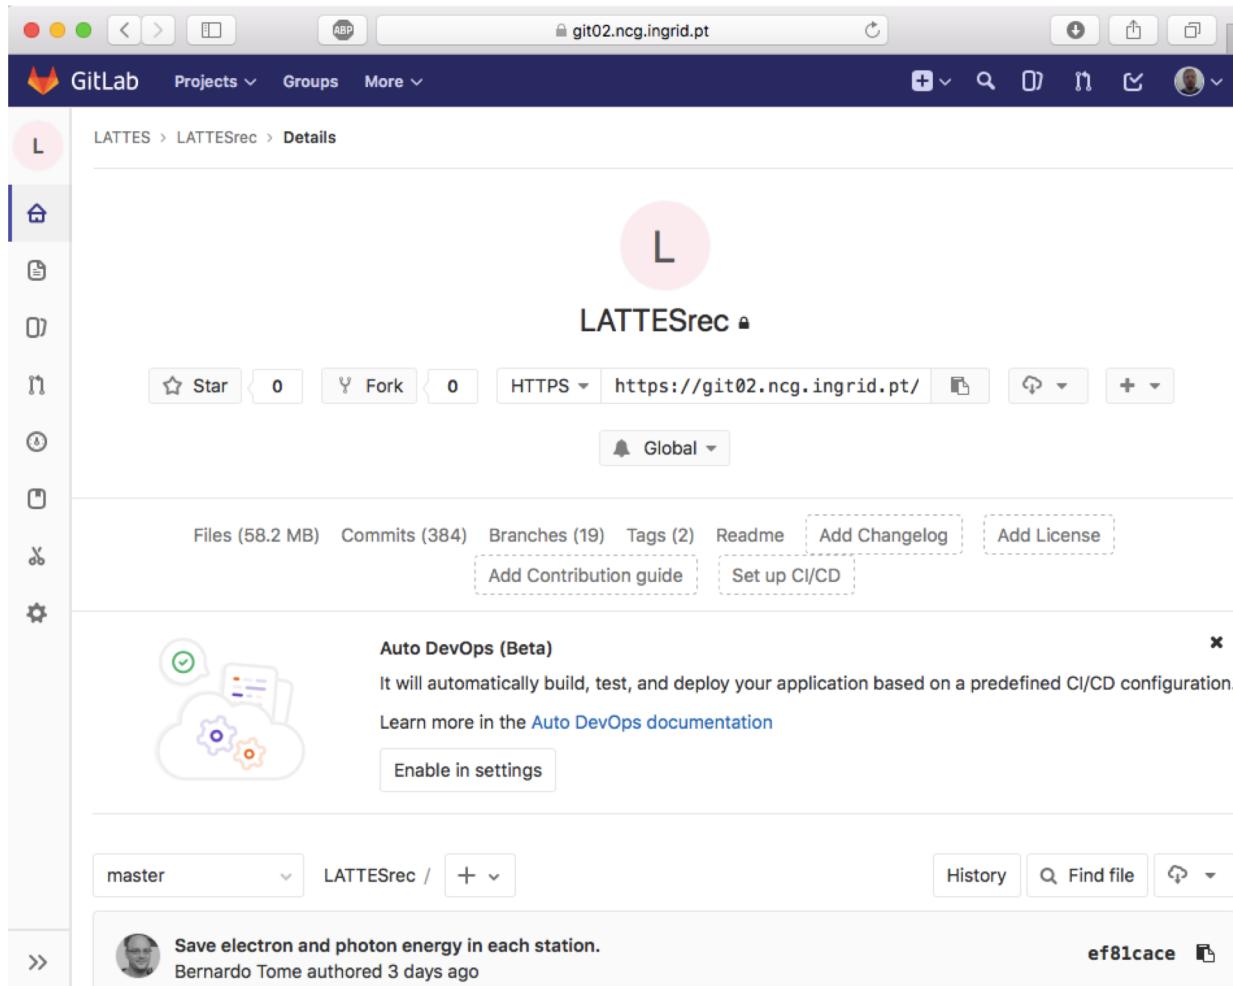

LATTES @ gitlab

The screenshot shows a web browser window for the URL `git02.ncg.ingrid.pt`. The header bar includes the GitLab logo, navigation links for Projects, Groups, and More, and various user interface icons. The main content area is titled "Projects" and displays three project entries:

Project Name	Type	Last Updated
LATTES / LATTESrec	Owner	updated a day ago
LATTES / LATTESSim	Owner	updated 3 days ago
LATTES / AnalysisTools	Owner	updated 2 weeks ago

Example: get LATTESrec

- git clone <https://....>

All info there!

The screenshot shows a GitLab interface with a list of commits and a detailed README section.

Commits:

- ReInputFiles: update compactness LDFs (8 months ago)
- include: Save electron and photon energy in each station. (3 days ago)
- src: Save electron and photon energy in each station. (3 days ago)
- utils: define energy rec variables (8 months ago)
- .gitignore: Modified .gitignore. (7 months ago)
- 1run_allLists.sh: adapt files to new nomenclature (a year ago)
- 2run_all.sh: Save electron and photon energy in each station. (3 days ago)
- Doxygenfile: update doxygen config file (a year ago)
- LATTESrec.cpp: Save electron and photon energy in each station. (3 days ago)
- Makefile: Attention: LattesSim changed to LATTESSim (3 weeks ago)
- Makelists.sh: Update Makelists.sh (a year ago)
- README: Add README file (9 months ago)
- makelist.sh: define energy rec variables (8 months ago)

README Content:

```
- To compile and run LATTESrec the library libEventROOT.so must be created first. This is done in the LATTES simulation directory (LattesSim).
```

Manage permissions

The screenshot shows the 'Manage permissions' page in a GitLab web application. The left sidebar has a gear icon selected. The main area displays a list of 'Existing members and groups'. A header for 'Members of LATTESrec 6' includes a search bar for 'Find existing members by name' and a sort dropdown for 'Name, ascending'. Below this, six group members are listed:

User	Role	Expiration date	Action
Bernardo Tome @bernardo · LATTES Joined 2 months ago	Owner		
Filipe de Oliveira Salles @filipe.o.salles Joined a month ago	Reporter	Expiration date	Delete
Jakub Vicha @vicha Joined a day ago	Developer	Expiration date	Delete
Liliana Apolinario @liliana Joined a month ago	Reporter	Expiration date	Delete
Ruben Conceição @ruben · It's you · LATTES Joined 2 months ago	Owner		
Ugo Giaccari @ugo Joined a month ago	Reporter	Expiration date	Delete

Summary

- Modular end-to-end simulation framework
 - From showers to high-level analysis
- Realistic and detailed description of the LATTES concept using Geant4 - LATTESSim
 - Optimization studies
 - Test different designs
- Reconstruction algorithms integrated in a single module – LATTESrec
 - Allows high-level analysis
- LATTESSim and LATTESrec available in gitlab repositories + doxygen documentation

END

WCD signal uniformity

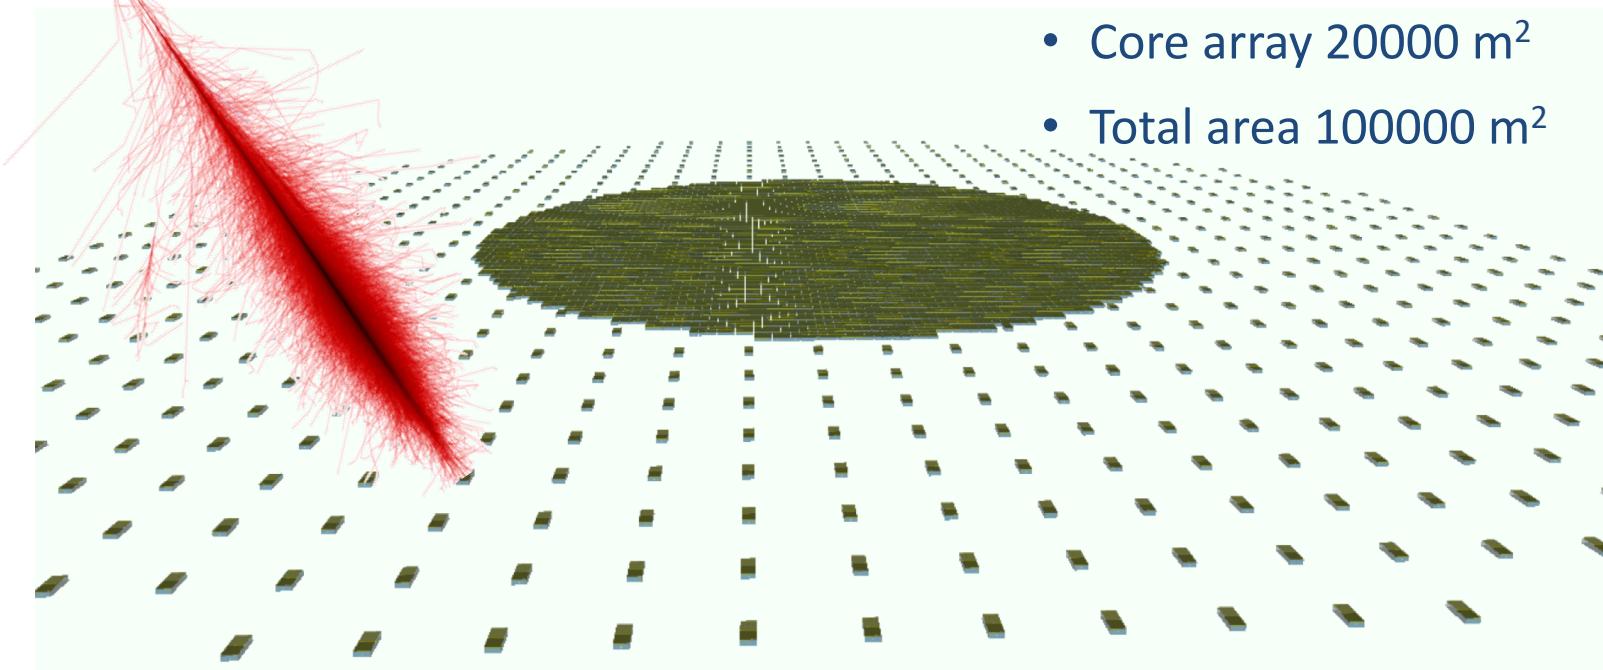

- Good uniformity across the tank area
- PMT spots visible

Single station signal

LATTES sparse array

- Core array 20000 m^2
- Total area 100000 m^2

- Extend LATTE sensitivity to higher energies ($\sim 100\text{ TeV}$);
- Improve sensitivity at low energies (veto hadron showers outside the core array);
- Layout to be optimized...
- Simulations ongoing using the fastsim.

LATTES

Large Array Telescope for Tracking Energetic Sources

- ✧ Joint Brazil/Italy/Portugal initiative
- ✧ Czech group joined recently
- ✧ Possible sites:
 - ✧ Atacama Large Millimeter Array site - Chajnantor plateau (5200 m)
 - ✧ North of Argentina (~ 5000 m)
 - ✧ ...
- ✧ LATTES array baseline
 - ✧ Compact core array
 - ✧ Area: 20 000 m²
 - ✧ Target lowest energies ($E_{\min} \sim 100$ GeV)
 - ✧ Sparse array
 - ✧ Area: 100 000 m²
 - ✧ Cover energies up to 100 TeV
