Recent results on charmed baryon at Belle

Wednesday 8 September 2021 16:40 (20 minutes)

Precision hadron spectroscopy helps in understanding how the matter is made around us. The large data sample accumulated by the Belle experiment at the KEKB asymmetric-energy e^+e^- collider provides us a unique opportunity to perform these studies. We report recent results on charmed baryon spectroscopy from Belle, which include a study on the spin and parity of $\Xi_c(2970)$, mass and width measurements on $\Sigma_c(2455/2520)^+$, $\Xi_c(2790/2815)$ radiative decays, $\Lambda + c \rightarrow \Lambda\eta\pi$, $\Omega_c \rightarrow \pi\Omega(2012)$. The talk may also cover results on non-charmed baryons at Belle.
