hidden charm mesons in nuclear matter and nuclei

Wednesday 8 September 2021 16:45 (20 minutes)

Recent results for the η_c - and J/ψ -nucleus bound state energies for various nuclei are presented. Essential input for the calculation, namely the medium-modified D and D^* meson masses, as well as the density distributions in nuclei, are calculated within the quark-meson coupling model. The attractive potentials for the η_C and J/ψ mesons in the nuclear medium originate, respectively, from the in-medium enhanced DD^* and $D\bar{D}$ loops in the η_c and J/ψ self energies. Our results suggest that the η_c and J/ψ mesons should form bound states with all the nuclei considered. Some of the results presented were recently published in J.J. Cobos-Martinez et al, Phys. Lett. B 811 (2020) 135882

Primary authors: COBOS MARTINEZ, Javier (Departamento de Física, Universidad de Sonora, México); Prof. TSUSHIMA, Kazuo (Laboratório de Física Teórica e Computacional-LFTC, Universidade Cruzeiro do Sul and Universidade Cidade de São Paulo, Brazil); Prof. KREIN, Gastao (Instituto de Física Teórica, Universidade Estadual Paulista, Brazil); Prof. THOMAS, Anthony W (e CSSM, School of Physical Sciences, University of Adelaide, Australia)

Presenter: COBOS MARTINEZ, Javier (Departamento de Física, Universidad de Sonora, México)

Session Classification: Hadrons in medium - hyperons and mesons in nuclear matter

Track Classification: Hadrons in medium - hyperons and mesons in nuclear matter
