Higgs physics results by ATLAS and CMS

Monday 6 September 2021 13:30 (30 minutes)

We present in this contribution an overview of the latest Higgs results published by the ATLAS and CMS collaborations. The focus will be on analyses considering the whole Run 2 dataset, showing measurements of the Higgs boson mass and inclusive, fiducial, and differential cross-section measurements in the main decay channels and searches in more challenging phase spaces. Finally, a review of the newest searches for double Higgs production at the LHC is presented.
