ATLAS measurements of CP violation and rare decays processes with beauty mesons

Tuesday 7 September 2021 19:10 (1 minute)

The ATLAS experiment has performed measurements of B-meson rare decays proceeding via suppressed electroweak flavour changing neutral currents, and of mixing and CP violation in the neutral B_s meson system. This talk will focus on the latest results from the ATLAS collaboration, such as rare processes $B_s^0 \rightarrow \mu\mu$ and $B^0 \rightarrow \mu\mu$, and CP violation in the $B_s^0 \rightarrow J/\psi \phi$ decays. In the latter, the Standard Model predicts the CP violating mixing phase, ϕ_s , to be very small and its SM value is very well constrained, while in many new physics models large ϕ_s values are expected. The latest measurements of ϕ_s and several other parameters describing the $B_s^0 \rightarrow J/\psi \phi$ decays will be reported.
