

Afternoon ML hands-on

- Make sure to test your setup before joining the tutorial
- You need a Google account (create a temporary one if it bothers you)
- Check that you can run this notebook :

https://colab.research.google.com/github/yanncoadou/MLtutorials/blob/main/ML_installation_checks.ipynb

- You can also run on a local installation with, e.g., Anaconda and Jupyter notebook (it should run) but we won't debug local issues live
